

The **existing view** to the west-southwest along the existing transmission line corridor from Key Viewpoint 12 on Cedar Hollow Road approximately mid-block, located immediately south of Beaumont High School in the City of Beaumont. The Route Alternative Option 3 would be located between the tall lattice steel structure of the 220 kV transmission line and the wood pole H-frame to the north (right in the image above). The corridor passes in close proximity to both older and newer residential developments in the City of Beaumont.
