**Subject: Limited Phase I ESA
Pomerado Reconductoring Corridor
San Diego County, California**

Dear Ms. Tracy:

Geosyntec Consultants (Geosyntec) is pleased to provide the San Diego Gas and Electric Company (SDG&E) this addendum to the Sunrise Powerlink Phase I Environmental Site Assessment prepared by Geosyntec, dated 18 August 2009 (Sunrise ESA). This addendum summarizes the results of a supplemental evaluation of the Pomerado Reconductoring Corridor along the existing overhead electrical transmission line extending approximately 1.9 miles between SDG&Es Pomerado and Sycamore Canyon Substations in San Diego County, California (the site; Figure 1). The purpose of the supplemental evaluation was to evaluate the site's existing transmission line corridor which was not included in the initial Sunrise ESA. This addendum was prepared by Mr. Douglas Baumwirt, PG and has been reviewed by Mr. Veryl Wittig, PG, CHG in accordance with the peer review policy of the firm.

BACKGROUND

Geosyntec was contracted by SDG&E in May 2009 to perform a Phase I Environmental Site Assessment (ESA) of the proposed approximately 120-mile Sunrise Powerlink electrical transmission corridor. The Pomerado Reconductoring Corridor does not lie within the ¼-mile buffer area assessed as part of the Sunrise ESA.

The existing site's electrical transmission line is planned to be upgraded in preparation for the energizing of the Sunrise Powerlink. Geosyntec understands that the planned construction activities for the conductor upgrades will take place on or adjacent to the existing poles, from existing access roads, and/or on previously disturbed areas. To supplement the Sunrise ESA, SDG&E retained Geosyntec to collect supplemental information for the Pomerado

Reconductoring Corridor to evaluate potential environmental conditions related to the planned reconductoring activities.

SCOPE OF WORK

To supplement the Sunrise ESA, Geosyntec performed the following scope of work for the site:

Database Search and File Review

Prior to conducting a site visit, Geosyntec performed the following tasks to address the regulatory and land use history for the site:

- The database search report compiled by Environmental Data Resources (EDR) for the Sunrise ESA, dated 3 June 2009, did not encompass the site. Therefore, Geosyntec obtained and reviewed a site-specific EDR database search report, dated 22 September 2010 (Attachment A). The database search report indicated that no sites were found for the searched databases within the Pomerado Reconductoring Corridor, but that several database listings were provided for various businesses adjoining and in the vicinity of the Pomerado Reconductoring Corridor in the industrial and commercially developed northern portion of the corridor. A complete list of sites identified during the database search is provided in Attachment A. Adjoining sites include: a General Atomics facility adjoining the site to the east at 14115 Stowe Drive listed in the RCRA-LQG and HAZNET databases for disposal of large quantities (more than 1,000 kg in any calendar month) of hazardous wastes with no violations reported; Toppan Optical Products adjoining the site to the east at 14107 Stowe Drive listed in the RCRA-LQG database for the disposal of large quantities of universal and hazardous wastes with no violations reported; and Costco Wholesale No 775 adjoining the site to the west at 12155 Tech Center Drive listed in the RCRA-SQG and HAZNET databases for the disposal of small quantities (more than 100 kg and less than 1,000 kg in any calendar month) of hazardous wastes with no violations reported. Other notable nearby sites identified in the database search include: Palomar Transit Mix-Poway, located approximately 1,800 feet west of the corridor at 13501 Kirkham Way, was listed for a closed case (1998) in the Leaking Underground Storage Tank (LUST) database related to a release of diesel fuel from an underground storage tank (UST); SKS, Inc/Pacific Pride, located approximately 600 feet east of the corridor at 13910 Danielson Street, is listed for the permitted use of five USTs which were reportedly installed in 1985 and 1987; Plexus PCA, located approximately 1,000 feet east of the corridor at 14118 Stowe Drive, was listed in the RCRA-SQG, FINDS, and HAZNET databases for the disposal of small quantities of hazardous wastes and air emissions with no violations reported; Krupp Bilstein of America, located approximately 900 feet east of the corridor at 14102 Stowe Drive, was listed in the AST, San Diego Co. HMMD and HAZNET databases for the use of a 2,500-gallon above-ground storage tank (AST) of unknown contents, the use of various compressed gases and oils, and disposal of hydrocarbon solvents, and waste oil; and Sonic Dry Clean Inc.,

located approximately 1,400 feet west of the corridor at 12170 Tech Center Drive, was listed in the Drycleaners, San Diego Co. HMMD, and HAZNET databases for operation as a drycleaner facility and the disposal of halogenated organic compounds with no violations reported. Five orphan sites were listed by EDR for the vicinity; however, based on the provided addresses, the orphan sites appear to be more than 5,000 feet from the Pomerado Reconductoring Corridor. Based on the nature of the listings and proximity to the Pomerado Reconductoring Corridor, Geosyntec does not believe that the reported entries in the database search report are indicative of recognized environmental conditions (RECs) at the site, and are unlikely to adversely affect construction of proposed upgrades to the Pomerado Reconductoring Corridor.

- To supplement the EDR report for the site, Geosyntec checked publicly available environmental databases for listings associated with the Pomerado Reconductoring Corridor, including: the California State Water Resources Control Board's online database *GeoTracker*, the Department of Toxic Substances Control's online database *Envirostor*, and the California Department of Conservation's Division of Oil, Gas, and Geothermal Resources online database *DOGGR*. No listings were found for the searched databases within or adjoining the Pomerado Reconductoring Corridor; however, the GeoTracker and Envirostor databases indicated that the "Sycamore Estates, Site K" site, an open site assessment case with the DTSC, is located approximately 2,000 feet east of the southern portion of the Pomerado Reconductoring Corridor. Geosyntec previously evaluated the "Sycamore Estates, Site K" case during the initial Sunrise ESA and concluded that the potential residual concentrations of perchlorate in soil and groundwater related to a nearby former General Dynamics facility were unlikely to affect construction. Based on the nature of the "Sycamore Estates, Site K" case and proximity to the Pomerado Reconductoring Corridor, Geosyntec does not believe that the case is indicative of a REC at the site, and are unlikely to adversely affect construction of proposed upgrades to the Pomerado Reconductoring Corridor..
- Geosyntec did not identify suspect facilities within or adjacent to the Pomerado Reconductoring Corridor which appeared to warrant additional regulatory file review. Therefore, no supplemental regulatory agency file review was performed.
- Historical aerial photographs (aerials) and 7.5 minute topographic maps (topos) of the site vicinity were reviewed to assess historical activities at the Pomerado Reconductoring Corridor. Aerials obtained from EDR were reviewed including aerials from 1953, 1963, 1974, 1989, 1995, 2002, 2005, and 2008. Additionally, aerials were viewed online at www.historicaerials.com, including aerials from 1964, 1968, 1980, 1989, 2003, and 2005. Topos reviewed included topos from 1903, 1904, 1942, 1952, 1967, 1975, and 1996. Based on the aerials and topos reviewed, an overhead transmission line appeared to exist in the approximate location of the existing Pomerado Reconductoring Corridor prior to 1953. The vicinity appeared as primarily undeveloped rural land with the exception of access roads along several ridgelines. By 1980 the General Dynamics facility was present

approximately 5,000 feet southeast of the site. By 1995 the Pomerado Substation was constructed. By 2003 the Sycamore Canyon Substation was constructed and expansive development in the vicinity of Pomerado substation was present. By 2005 the Stonebridge Estates residential development in the southern portion of the Pomerado Reconductoring Corridor was present and the site vicinity appeared similar to the current configuration. Indications of RECs were not observed in the aeriels and topos reviewed.

Interview of Property Owner

The Pomerado Reconductoring Corridor exists within an easement which traverses alongside more than 20 adjoining parcels. No property owners or managers were identified during the assessment; therefore, no interviews were performed as part of this assessment.

Site Reconnaissance

Mr. Douglas Baumwirt, PG and Alex Greene, PG, CEG of Geosyntec conducted a site reconnaissance of the site on 5 October 2010. The site reconnaissance included a walking and driving visual inspection of the site and accessible adjoining properties. Due to access limitations and posted “No Trespassing” signs, several adjoining properties were not inspected. Site features are highlighted on Figure 1, and photographs taken during the reconnaissance are presented in a photo-log as Attachment B to this addendum.

During the reconnaissance, Geosyntec was not escorted by a representative of a property owner or SDG&E. The northern portion of the Pomerado Reconductoring Corridor was observed to be located in an easement traversing between commercial and industrial developments. Where the easement adjoins the Costco car-wash facility to the west, approximately 12 plastic drums and two 5-gallon buckets apparently related to the Costco carwash were observed. Drum labels indicated that the contents were detergents, tire conditioner, and waxes. No obvious indications of leaks were observed. Furthermore, no obvious indications of RECs were identified in the northern portion of the easement for the Pomerado Reconductoring Corridor during the reconnaissance.

The central portion of the Pomerado Reconductoring Corridor where it spans Beeler Canyon was observed to be primarily undeveloped land. A constructed stormwater retention basin and wetland was observed on the slope north of Beeler Canyon Road, approximately 200 feet east of the easement. No obvious indications of RECs were identified in the central portion of the easement for the Pomerado Reconductoring Corridor during the reconnaissance.

The southern portion of the Pomerado Reconductoring Corridor was primarily developed with the Stonebridge Estates residential development. South of the residential development and approximately 700 feet north of the Sycamore Canyon Substation was a San Diego County Water Authority construction site. The construction site was for the San Vicente Tunnel Project where the central shaft is located approximately 500 feet east of the Pomerado Reconductoring Corridor. No obvious indications of RECs were identified in the southern portion of the easement for the Pomerado Reconductoring Corridor during the reconnaissance.

DATA GAPS

Based on the identified information, it is believed that “data gaps” as defined by ASTM Standard E 1527-05 exist but have not affected the identification of recognized environmental conditions at the site. Geosyntec did not request to review files with regulatory agencies, did not interview property owners, and the aerial photos and topographic maps were not obtained and reviewed in 5-year intervals dating back to 1940. However, Geosyntec believes that the identified data gaps are not believed to be significant or material with respect to identification of RECs at the site.

FINDINGS

We have performed a Phase I Environmental Site Assessment in conformance with the scope of ASTM Standard E 1527-05 for the approximately 1.9 mile Pomerado Reconductoring Corridor located in San Diego County, California. Any exception to, or deletions from, this practice are described in the Data Gaps section of this addendum and/or Section 8.3 Data Gaps of the Sunrise ESA report.

Recognized Environmental Conditions

This assessment has revealed no evidence of recognized or suspected environmental conditions in connection with the property.

CONCLUSIONS

Geosyntec has performed this evaluation of the site to supplement the Sunrise ESA because SDG&E is planning to perform upgrades to the existing overhead electrical transmission lines between the Pomerado and Sycamore Canyon Substations. Based on a supplemental ground reconnaissance and database search, it appears that no evidence of recognized environmental conditions was identified for the site. Furthermore, no indications of environmental conditions which may present an elevated potential to affect upgrade-construction at the proposed Pomerado Reconductoring Corridor were observed.

The Sunrise ESA and this addendum were prepared in accordance with the scope of work, terms and conditions described in Geosyntec’s proposal dated 1 May 2009 and e-mail dated 20 September 2010, respectively. The scopes of work followed guidance contained in the ASTM Standards E 1527-05, *Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process*, and E 2247-08, *Standard Practice for Environmental Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property*.

I declare that, to the best of my professional knowledge and belief that I meet the definition of Environmental Professional as defined in §312.10 of 40 C.F.R. 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

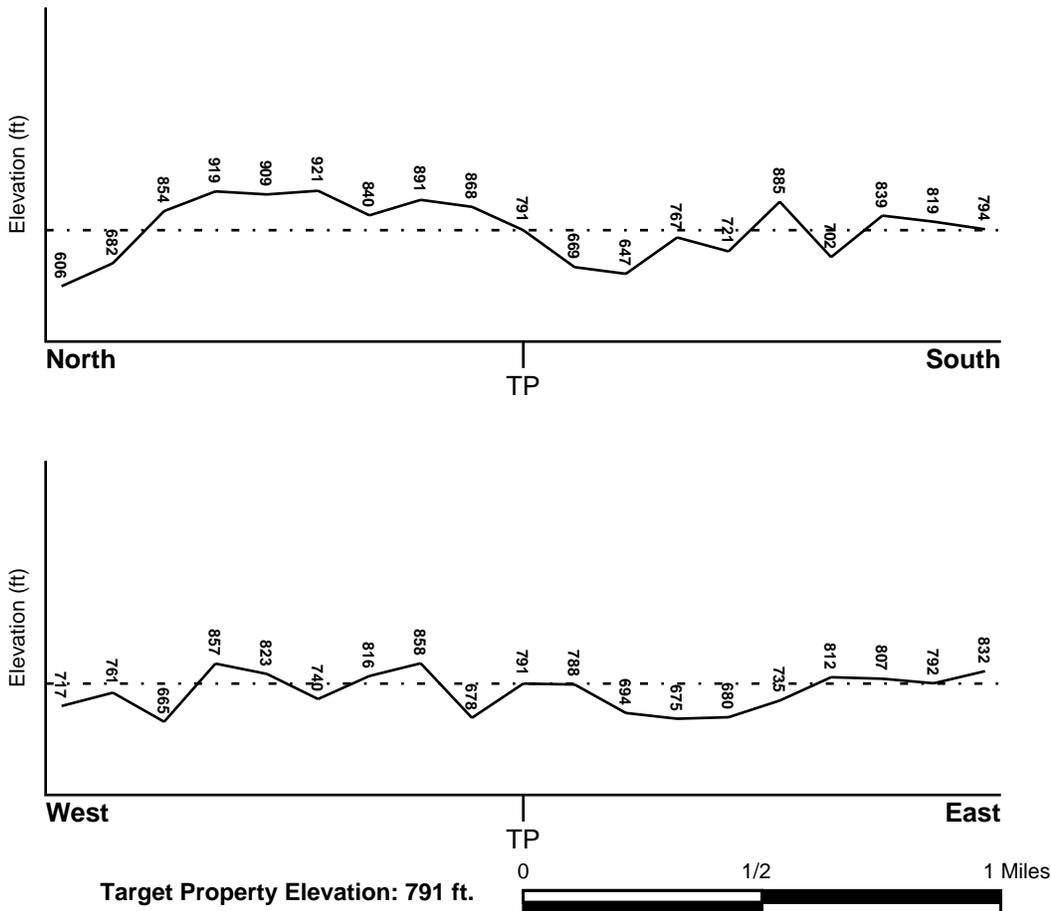

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
