

October 18, 2010

I. REPRESENTATIVES, LOCATIONS AND DATES

Frank Salazar, Campo Band of Mission Indians, served as the representative for the Rough Acres Substation, Link 1; October 7-8 and 11-15, 2010.

II. CONSTRUCTION ACTIVITIES

Construction activity consisted of trenching and associated shoveling for the installation of electrical conduit. Trenching dimensions ranged from approximately 300 to 740 feet (ft) long by two ft deep and two ft wide.

III. OBSERVATIONS

October 7-8

Mr. Salazar monitored by an airfield near the Rough Acres substation. Mr. Salazar noted the soil to consist largely of fill. No in situ soils or cultural resources were observed.

October 11-15

Mr. Salazar monitored near the above mentioned airfield as well as associated access roads and adjacent bungalows. Although the soil is noticeably sterile, two isolated lithics were observed on October 14th. Mr. Salazar reported a small secondary flake and a larger debitage fragment, both of green metavolcanic material.

IV. CONCERNS EXPRESSED

Mr. Salazar reported no concerns at this time.

V. SUMMARY

No significant resources were observed.

VI. SUMMARY PREPARER

Hillary Murphy, Project Archaeologist, Tierra Environmental Services, Inc.
