Subject: opposition to the modified route D alternative

I want to express my opposition to the Modified Route D Alternative for the Sunrise Powerlink.

It is utter folly to put 2 transmission lines in close proximity to each other (5 to 10 miles) in an area where it is not unusual to have earthquakes and wild fires. In case of a large earthquake, or a terrorist attack, or a fire SDG&E would stand a good chance of losing both lines. The reality of the world today would dictate that as many miles as possible exist between the 2 lines. And it must be considered that much of the land this route would cover has not burned in decades and is ripe for a fire.

South East county already has a transmission line. Environmental Justice would dictate that North county now shoulder some of the burden. They will, after all, share in the benefits.

Sincerely, Jacqueline D Milke
2443 Lake Morena Dr. Campo, CA 9190
