

Proponent's Environmental Assessment for Southern California Edison Company's Eagle Mountain-Blythe 161 kiloVolt Transmission Line Rating Remediation Project Volume 7

July 31, 2024 (PEA submittal date)

Remove existing subtransmission structures and conductors, install new subtransmission structures and conductors on existing distribution and subtransmission circuits.

The Eagle Mountain-Blythe 161 kiloVolt Transmission Line Rating Remediation Project would be located in Riverside County and the City of Blythe within the State of California.

Re: 20-10828, Eagle Mountain-Blythe 161KV Subtransmission Line Rating Remediation Project, Riverside County

Dear Mr. Gonzalez:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

Project Title: 20-10828, Eagle Mountain-Blythe 161KV Subtransmission Line Rating Remediation Project

County: Riverside

USGS Quadrangle Name: SEE EXCEL SPREADSHEET FOR QUAD/T/R/SEC INFO.

Township: **Range:** **Sections:**

Contact Person: Matthew Gonzalez

Company/Firm/Agency: Rincon Consultants, Inc.

Street Address: 180 N Ashwood Avenue

City: Ventura **Zip:** 93003

Phone: 805-705-5513 **Email:** Mgonzalez@rinconconsultants.com

Project Description: The Project consists of the following Project components:

- Replacing approximately 53 circuit miles of the existing 161-kV 336.4 Merlin and Linnet aluminum conductor, steel reinforced (ACSR) with new 336 Oriole ACSR between the Eagle Mountain and Blythe Substations (this process is referred to as “re-conductoring”)
 - Installing approximately one mile of overhead ground wire along the segment of the circuit extending north from Eagle Mountain Substation
 - Removing 25 Pumco steel poles with foundations and 1 single wood pole and replacing them with 17 tubular steel poles (TSPs) with foundations (9 of the Pumco steel poles that would be removed would be not replaced)
 - Replacing 16 wood three-pole dead-end structures with 16 three-pole TSPs with foundations
- Replacing 11 wood H-frame structures with 11 lightweight steel (LWS) H-frame structures

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

WATER TREATMENT PLANT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ELECTRIC GENERATOR

STATE MASTER

AIR MAJOR

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ownership for the subject site in the Army Corps of Engineers - Los Angeles District real estate files. The site is assumed to have been used by the Department of Defense as a water supply source during operation of the California-Arizona Maneuver Area Desert Training Center in World War II. The site is listed in Patton's Desert Training Center, a compiled history of the CAMA military use. The well and concrete structure are located on lands owned and maintained by the Department of the Interior, Bureau of Land Management. Review of historical real estate information for Township 6 South, Range 19 East at the California Desert District Office of the Bureau of Land Management in Riverside, California did not reveal prior ownership of any lands in this area by the Department of Defense. The lands contained in the subject township and range were declared part of the Department of the Interior's Desert Conservation Area on 21 October 1976. Review of the current Riverside County Assessor's records and maps and historical information at the Bureau of Land Management California Desert District Office in Riverside, California verified that the site is currently owned and maintained by the Department of the Interior. The well was located approximately 0.2 miles west of a small shed housing monitoring equipment for the gasoline pipeline. The well was located approximately 500 feet north of the maintenance road at this point. The well was located inside a concrete cinder block structure measuring six feet long by four feet wide by four feet deep. The entire concrete structure was covered by a metal plate. Lifting the metal revealed the well. The six-inch diameter well was constructed of steel casing and was filled in with concrete. The base of the enclosed area consisted of natural soils.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

#2 Vessel >= 300 Tons: No
#3 Vessel >= 300 Tons: No
Evacs: No
Injuries: No
Fatals: No
Comments: Not reported
Description: Per caller, a contractor was on site pumping water containing coal tar into a 55 Gal drum and overfilled the drum. Was released onto concrete floor within the building. Stopped and contained. Contractor will be conducting clean up. No water impacted.

Site Name: Tri Palm Estates & Country Club
Violation Date: 10-15-2019
Citation: 40 CFR 1 265.32 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.32
Violation Description: Failure of the facility to maintain the following emergency equipment or equivalents: 1) An internal communications or alarm system; 2) A device, such as a telephone (immediately available at the scene of Operations/ Maintenance) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams; 3) Portable fire extinguishers, fire control equipment, spill control equipment, and decontamination equipment; and 4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.
Violation Notes: Returned to compliance on 12/10/2019. OBSERVATION: Observed inoperable or lack of adequate spill equipment. CORRECTIVE ACTION: Owner/operator shall ensure spill equipment is maintained on site and available for use.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS,

Site ID: 160672
Site Name: Tri Palm Estates & Country Club
Violation Date: 09-09-2019
Citation: Un-Specified
Violation Description: Business Plan Program - Operations/Maintenance - General Local Ordinance
Violation Notes: Returned to compliance on 12/10/2019. OBSERVATION: Observed open 55 gal drum of oil south of waste area missing bung cap and approximately 1/4 full of liquid. Observed spill inside shed of herbicide/pesticide storage that had not been addressed. CORRECTIVE ACTION: Owner/operator shall store all hazardous materials in a manner which will prevent unauthorized fire, explosion, or release. Owner/operator shall store containers closed when not using materials. Recommend secondary containment or changing transfer operations for herbicide inside storage shed to prevent/containerize spills.

Violation Date: 09-08-2022
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 10/27/2022. OBSERVATION: Observed one 55 gal used oil drum with accumulation start date of 11/2021 and one 55 gallon used oil filter drum on site without a start date determined. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have all hazardous waste properly hauled off site by a registered hazardous waste transporter.

Violation Date: 09-09-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 12/10/2019. OBSERVATION: Observed faded labels on secondary containment for haz waste, as this is where label was posted for all waste drums within secondary containment. CORRECTIVE ACTION: Owner/operator shall re-label hazardous waste containers with all the required information. Label shall include at least: the words "hazardous waste", generator name and address, accumulation start date, composition and physical state of waste, and hazardous property statement. Submit photos to this department, if applicable.

Global ID: T10000010110
Case Type: Non-Case Information
Status: Informational Item / Review Complete
Status Date: 02/07/2017
Lead Agency: RIVERSIDE COUNTY LOP
Case Worker: SCB
Local Agency: RIVERSIDE COUNTY LOP
RB Case Number: Not reported
Loc Case Number: SR0037510
File Location: Not reported
Potential Contaminants of Concern: Not reported
Potential Media Affected: Not reported
Site History: Two 25K USTs abandoned in-place (fiber optic line through UST cavity) and one 25k UST removed. Soil samples were collected using a direct push rig and excavator. 12 soil samples were analyzed for TPH and VOCs using EPA Methods 8015 and 8260-full scan. Except for detections of 28 mg/kg TPHC28-C40 and 7.3 mg/kg TPHC6-C44, all results were non-detect for TPHC6-C44 and VOCs. One sample was analyzed for lead. Based on information provided, no release was identified and no further assessment or remediation was required. Data uploaded to GeoTracker for informational purposes only.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Focus Map: **5** **Click Here for FRS Facility Detail Report:**

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL));

State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor

provides similar information to the information that was available in CalSites, and provides additional site information,

including, but not limited to, identification of formerly-contaminated properties that have been released for

reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses,

and risk characterization information that is used to assess potential impacts to public health and the environment

at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Appendix C Agency Communication

Summary of Meeting Dates

Agency	Meeting Dates
Bureau of Land Management (BLM)	*TBD – no formal meetings to date
California Public Utilities Commission (CPUC)	September 23, 2021; November 16, 2023; April 30, 2024
California Fish and Wildlife (CDFW)	*TBD – no formal meetings to date
Metropolitan Water District (MWD)	*TBD – no formal meetings to date

Summary of Meeting Notes

Bureau of Land Management

In 2017, SCE met with the Bureau of Land Management (BLM) via MS Teams virtual conferencing to introduce the EM-B project. SCE also meets with BLM monthly and quarterly to discuss SCE's work, provide project updates, and go over project status and priorities.

California Department of Fish and Wildlife

In 2017, SCE met with the California Department of Fish and Wildlife (CDFW) to introduce the EM-B project. SCE submitted a Lake and Streambed Alteration Agreement (LSAA) application to CDFW in 2022. SCE will provide CDFW with updates as the project develops. SCE has bi-annual meetings with CDFW to talk about project development and coordination.

California Public Utilities Commission

In 2021, SCE met with the California Public Utilities Commission (CPUC) to preview the project's purpose and need and discuss the overall scope of the project. At the time of this meeting, SCE believed the project would be exempt from CPUC licensing; however, in 2022 SCE was directed by the CPUC to file a Permit to Construct (PTC). In 2023, SCE met with the CPUC to discuss submitting an Initial Study (IS), which had been prepared by SCE when it was believed the project would be exempt and CDFW would take the role of lead agency, in lieu of a Proponents Environmental Assessment (PEA). In 2024, SCE met with the CPUC and its consultant, ECorp Consultants, to review the project's purpose and need, and to provide a status update on the application filing. SCE has quarterly meetings with the CPUC's Energy Division to discuss its current and upcoming licensing projects.

Metropolitan Water District

In 2018, SCE met with the Metropolitan Water District (MWD), to introduce the EM-B project. SCE will continue to provide MWD with updates as the project develops through to its completion.

SECTION 1

TRANSMISSION LINE PROJECT FIRE PLAN

1.1 INTENT

- A. This Specification has been developed for use by Edison and/or Contractor crews to ensure uniform guidelines for prevention, control, and extinguishment of fires are followed during transmission line construction projects. Frequent reference to and compliance with this Specification shall result in more consistency and greater fire control during transmission line construction.
- B. The intent of this Specification is to provide an overall technical reference for the Work as defined in the Project Specification. However, not all sections of this Specification may be applicable to every Project. The Project Specification shall define the specific Project Job requirements and shall be the master document in regards to this Specification. In all cases where this Specification is in conflict with the Project Specification, the Project Specification shall apply.
- C. Deviation from this Specification shall not be permitted unless so described in the Project Specification or approved by Edison's Construction Representative.
- D. All Working areas shall be maintained in an orderly, safe, clean and neat manner. As Work is completed in any one area, the area shall be promptly cleaned of all trash and surplus material and left in as good or better condition than initially encountered.

1.2 CONFORMANCE TO APPLICABLE CODES AND SAFETY REGULATIONS

- A. Construction shall be performed in accordance with all sanitary, safety and building codes; Rules for Overhead Electric Line Construction G.O. 95, Public Utilities Commission, the National Electric Safety Code; and orders, ordinances and regulations that may apply. All Work shall be performed in accordance with the Constructor's Safety Policy, OSHA or any other applicable provisions of Federal, State or local safety regulations. All regulations of the Division of Industrial Safety of the applicable state, any other public agency, or insurance policies shall also be complied with.

TRANSMISSION LINE PROJECT FIRE PLAN

- B. All Work shall be accomplished by compliance to United States Forest Service Fire Plan, California Public Resource Code, Project Specification, this Specification, referenced specifications and standards, permitting constraints and conditions, and governing regulations using proper tools and equipment that are in good Working condition.
- C. The Work shall be performed in compliance with the latest version of the following codes and standards as amended to the date of the Project Specification, which are by reference, incorporated herein and made a part of the Project Specification. However, where the Drawings and/or this Specification calls for apparatus, workmanship, construction, etc., in excess of the referenced code requirements, Constructor shall take steps such that the Work shall be provided.

California Public Resource Code (Division 4. Forests, Forestry and Range and Forage Lands) (CPRC)

United States Forest Service Handbook (FSH)

Storm Water Pollution Prevention Plan (SWPPP)

1.3 RESPONSIBILITIES

This Specification describes Constructor and Construction Representative's responsibilities. Edison or Constructor's crew may assume these responsibilities as follows:

- A. Edison crew that are assigned to construct transmission lines will assume the responsibilities of "Constructor", as described in this Specification, or
- B. Contractors who are contracted and authorized by Edison to construct transmission lines shall take on the responsibilities of "Constructor", as delineated in this Specification.
- C. A Construction Representative will be assigned by Southern California Edison.

TRANSMISSION LINE PROJECT FIRE PLAN

1.4 SCOPE OF WORK

Constructor shall furnish all supervision, labor, tools, equipment and material necessary to prevent starting any fire, control spread of fires if started, and provide assistance for extinguishing fires started as a result of transmission line construction activities; as specified herein, the Project Specification, and Jobwalk Minutes.

1.5 SAFEGUARDS AND CONTROL OF FIRES

- A. Constructor shall provide temporary safeguards, walks, rails, guards, construction fences, and suchlike, as required by any ordinances, as directed by the Construction Representative, or as necessary to protect workers, Edison employees, and the public from the time when the Work is begun until it is accepted by Edison. Constructor shall ensure reasonable safeguards have been implemented to prevent any fires from starting.
- B. Constructor shall incorporate Best Management Practices (BMS) to prevent starting any uncontrolled fire, control spread of fires if started, and provide assistance for extinguishing fires started as a result of transmission line construction. Constructor shall be solely responsible to owners or occupants of land for damage of every kind and nature resulting from the Work and activities of Constructor and its crews.
- C. In the event of unforeseen damage to any improvement, Constructor shall promptly notify the Construction Representative and the owner of such improvements. Any damaged improvements shall immediately be repaired by Constructor as approved by the owner of such damaged facility. Other damaged property shall be repaired within a reasonable time.

1.6 PRECAUTIONS IN AREAS OF FIRE HAZARDS

- A. Constructor shall use every reasonable precaution against starting fires where the Work is performed, in whole or in part, in an area covered with flammable dry grass, brush, and trees. Such precautions shall include, but not be limited to, prohibiting smoking on the Jobsite, use of spark arresters on equipment exhaust, and if necessary assigning a Fire Patrolperson whose responsibility shall be solely to monitor the Constructor's fire-prevention activities. The Fire Patrolperson shall be equipped with radio or cell phone communication capability.

TRANSMISSION LINE PROJECT FIRE PLAN

- B. Constructor shall provide required portable fire fighting equipment, shovels, axes, and other necessary fire fighting equipment at all sites where Work is in progress, and with all crews in transit.
- C. Constructor shall observe all other precautionary measures that may be ordered by the United States Forest Service (USFS), Division of Forestry of the State where the worksite is located, County Fire Departments, and their authorized representative.
- D. Constructor is further advised that during periods of extreme fire hazard due to critical weather conditions, United States Forest Service, Division of Forestry of the State where the worksite is located, and County Fire Departments may order Work to be suspended at any time in designated areas.
- E. In the event of any uncontrolled fire near the Work, and as requested by the Construction Representative, Constructor shall furnish any and all of its forces and equipment to extinguish such fire as directed by the United States Forest Service, Division of Forestry of the State where the worksite is located, and County Fire Departments. Under these conditions, Constructor's forces shall operate under the sole jurisdiction of the United States Forest Service, Division of Forestry of the State where the worksite is located, and County Fire Departments. Payment for labor and equipment shall be negotiated between the Constructor and the United States Forest Service.

1.7 FIRE PLAN REQUIREMENTS FOR US NATIONAL FOREST AREAS

1.7.1 Constructors Responsibilities

- A. The provisions set forth in this section of the Project Fire Plan outline the Constructor's responsibility for fire prevention and suppression activities, along with the establishment of a fire attack procedure during transmission line construction projects which take place within U.S. National Forest areas. The "Project Vicinity" is defined as that area which is within and adjacent to the project rights-of-way and work areas, along with all roads used in connection with the construction activities. The provisions set forth in this section of the Project Fire Plan also specify conditions under which construction activities may be curtailed or shut down while within National Forest areas.

TRANSMISSION LINE PROJECT FIRE PLAN

- B. The terms and conditions of this Project Fire Plan are designed to be in compliance, or exceed the provisions of the U.S Forest Service "Fire Plan for Construction and Service Contracts" dated 04-26-04 and is incorporated in it's entirety herein.
- C. The Forest Service may conduct one or more inspections for compliance with this fire plan. The number, timing, and scope of such inspections will be committed at the discretion of the agency employees responsible for contract administration. Such inspections do not relieve the Constructor of responsibility for correcting violations of this fire plan or for fire safety in general.

Constructor (or his designated representative) shall:

- 1. Abide by the requirements of this Fire Plan,
- 2. Take all steps necessary to prevent his/her employees, subcontractors and their employees from setting fires,
- 3. Be responsible for preventing the escape of fires set accidentally as a result of construction activity,
- 4. Participate in the extinguishing of all fires in the event that they cannot be immediately contained until relieved by a representative of the U.S. Forest Service,
- 5. Assure that all project fire prevention methods, tools, equipment and fire suppression activities are in accordance with any U.S. Forest Service, State, or local codes, the Project Specification requirements, and as stated herein,
- 6. Complete the Contractor's Plan Regarding Personnel, Equipment and Organization (See last page of this document), and furnish the U.S. Forest Service representative with a copy prior to commencing work in the National Forest Project Vicinity,
- 7. Advise the responsible U.S Forest Service representative of any changes in personnel, equipment and organization as the changes occur, and

TRANSMISSION LINE PROJECT FIRE PLAN

8. Assign a fire patrolperson whose responsibility shall be solely to monitor the Constructor's fire-prevention activities. The fire patrolperson shall be equipped with radio or cell phone communication capability. The fire patrolperson shall perform the project fire patrolperson duties as described herein and any other duties as necessary to ensure that the Constructor is abiding by this Specification.

1.7.2 Operating and Construction Guidelines

Prior to commencement of Work each day, the Constructor shall obtain the Project Activity Level (PAL) and plan the work accordingly. Constructor shall then, as part of a morning safety tailboard meeting:

- A. Review fire plan with employees, fire patrolperson, and the Construction Representative;
- B. Review smoking policy;
- C. Remind employees to not leave idling vehicles with hot exhaust manifolds on dirt roads with dead combustible vegetation under the vehicle;
- D. Inspect vehicles and fire fighting equipment daily to ensure equipment is operable and that Fire Plan inspection sheet is still with vehicles;
- E. Inspect any new vehicles and construction equipment to ensure it is properly equipped with minimum required fire fighting tools and equipment; and
- F. Keep a detailed daily log which documents locations of all crew and equipment as part of placement in case a fire occurs.

1.7.3 Fire Prevention Measures

1.7.3.1 Permits Required

The Constructor shall secure a special written permit from the District Ranger or designated representative before engaging in any of the activities listed below:

TRANSMISSION LINE PROJECT FIRE PLAN

- A. Blasting and Storage of Explosives and Detonators. Explosives Permit is required by California Health & Safety Code, Section 12101,
- B. Burning,
- C. Air Pollution (Issued by local State or County Air Pollution Control Districts, as applicable.)
- D. Camp, Lunch and Warming Fires.
- E. Welding and Cutting.

1.7.3.2 Regulations for Burning

Before setting any fires whatsoever, the Constructor shall notify the Contracting Officer (CO) of his/her intentions. Special care shall be taken to prevent scorching or causing any damage to adjacent structures, trees, and shrubbery. Piles of material to be burned shall be of such size and so placed that during burning no damage shall result to adjacent objects.

1.7.3.3 Smoking and Fire Rules

Smoking shall not be permitted, except in a barren area or in an area cleared to mineral soil at least 3-feet in diameter. Designated smoking areas shall be assigned by the Constructor. Constructor shall provide closeable airtight and fireproof container designed to contain cigarette butts for designated smoking areas. Constructor shall post signs regarding smoking and fire rules in conspicuous places for all employees to see. Constructor's supervisory personnel shall require compliance with these rules. Under no circumstances shall smoking be permitted while Constructor's employees are operating light or heavy equipment, while commuting to the Jobsite from highways, or walking or working in grass and woodlands.

TRANSMISSION LINE PROJECT FIRE PLAN

1.7.3.4 Storage and Parking Areas

Equipment service areas, parking areas, and gas and oil storage areas shall be cleared of all flammable material for a radius of at least 50-feet. Small mobile or stationary engine sites shall be cleared of flammable material for a radius of at least 15-feet from such engine. The USFS Contracting Officer (CO) shall approve such sites in writing.

1.7.3.5 Welding

Constructor shall confine welding activity to cleared areas having a minimum radius of 10-feet measured from place of welding. If welding occurs on the line right-of-way, a fire patrolperson shall observe the operation.

1.7.3.6 Blasting

Constructor shall use electric caps only. When blasting is necessary in slash areas, a watchperson equipped with shovel and a water-filled backpack can (5 gallon), with hand pump, shall remain in the immediate area for an hour after blasting has been completed.

1.7.3.7 Oil Filter and Glass Jugs

Constructor shall remove from National Forest land all oily rags and used oil filters. Constructor shall prohibit his/her employees using glass bottles and jugs in National Forests.

1.7.4 Fire Fighting and Reporting Tools and Equipment

Constructor shall provide the Fire Fighting tools and equipment as listed below. All tools and equipment shall be in good workable condition and shall meet the following principle Forest Service specifications for fire tools:

- A. Shovels shall be size "O" or larger and be not less than 46-inches in overall length.
- B. Axes (or pulaskis) shall have 2-1/2 pound or larger heads and be not less than 28-inches in overall length.

TRANSMISSION LINE PROJECT FIRE PLAN

1.7.4.1 For Diesel and Gasoline Operated Engines

For Project Activity Level A or higher, Constructor shall equip all diesel and/or gasoline-operated engines, both stationary and mobile, and all flues used in any contract and camp operations with spark arresters that meet Forest Service standards set forth in the National Wildfire Coordinating Group publication for Multi-position Small Engines, #430-1, or General Purpose and Locomotive, #430-2.

Spark arresters are not required on equipment powered by exhaust-driven turbo-charged engines or motor vehicles equipped with a maintained muffler as defined in California Public Resources Code (CPRC), Section 4442 and 4443.

1.7.4.2 For Vehicles and Construction Operating Equipment

For Project Activity Level A or higher, Constructor shall furnish and have available for emergency use on each vehicle used in conjunction with performance of the work (i.e., truck, pickup trucks, crew vehicle, tractor, grader and other construction equipment) hand tools and/or equipment as follows:

- A. One shovel,
- B. One axe (or pulaski), and
- C. A fully charged 2-A:10-B:C fire extinguisher, or larger.

1.7.4.3 For Machines with Hydraulic Systems

For Project Activity Level A or higher, Constructor shall equip each mechanized harvesting machine with hydraulic systems, powered by an internal combustion engine (e.g., chipper, feller/buncher, harvester, forwarder, stroke delimber, etc), except tractors and skidders, with at least two 4-A:80-B:C fire extinguishers, or equivalent. In addition, concentrations of wood dust and debris shall be removed from such equipment daily.

TRANSMISSION LINE PROJECT FIRE PLAN

1.7.4.4 For Welders

For Project Activity Level A or higher, Constructor shall furnish one (1) shovel and one (1) backpack 5 gallon water-filled tank with pump with each welder.

1.7.4.5 For Non-Self-Propelling Gasoline or Diesel Powered Tools

For Project Activity Level A or higher, Constructor shall furnish one shovel and one pressurized chemical fire extinguisher for each gasoline-powered tool, including but not restricted to compressors, hydraulic accumulators, gardening tools (such as chain saws and weed trimmers), soil augers, rock drills, etc. Fire extinguishers shall be of the type and size necessary to provide assurance of controlling fire caused by use of portable power tools under various climatic and fuel conditions. Shovel must be kept within 100-feet from each chain saw when used off cleared landing areas.

1.7.4.6 Communication Capability

- A. For Project Activity Level A or higher, Constructor shall furnish communication capability (e.g., a serviceable telephone, radio-telephone, or radio system) connecting each operation with the designated Forest Service Dispatch Center. A radio-equipped fire patrolperson vehicle will satisfy this requirement if in operation during the time required.
- B. The communication system shall provide prompt and reliable communications between the Constructor's operations and the Forest Service Dispatch Center.
- C. The communications system shall be operable during Constructor's operation in the fire precautionary period and at the time fire patrolperson service is required.
- D. The communications system shall be capable of contacting the designated Forest Service Dispatch Center within five (5) minutes of discovery of a fire in the Constructor's operating area.

TRANSMISSION LINE PROJECT FIRE PLAN

1.7.4.7 For Project Work Area

- A. A project work area is an area where Work is concentrated, including a zone extending 500-feet radially from the center of a work area.
- B. For Project Activity Level B or higher, the following personnel and equipment shall be provided:

1.7.4.7.1 Fire Patrolperson

Constructor shall provide and stage the following personnel and equipment at each project work area:

- A. One dedicated fire patrolperson who shall be responsible for patrol of the activities for prevention, detection, control, and extinguishing of fires;
- B. One water filled five (5) gallons backpack pump dedicated to the fire patrolperson;
- C. One water filled five (5) gallons backpack pump dedicated to the crew at the project work area; and
- D. Proven working and reliable communication equipment, radio or cell phone, which guarantees communication path to 911 operator in case of emergency. This communication equipment can be vehicle equipment but must be portable if remote operation away from the vehicle is commenced.

1.7.4.7.2 Water Tank or Trailer

- A. Constructor shall furnish a water tank truck or trailer. The truck may serve a dual purpose. The truck may be used to spray water on roads and work area to suppress dust as per Storm Water Pollution Prevention Plan (SWPPP) requirements. The main purpose shall be to assist in the fire prevention and fire fighting activities.

TRANSMISSION LINE PROJECT FIRE PLAN

The truck shall never have less than 300 gallons of water aboard, even when en-route to refill.

B. The water tank truck or trailer shall be located on or adjacent to the project work area and meet the following minimum specifications:

1. Contain at least 300 gallons of water;
2. A combination straight stream-fog nozzle with 300-feet of 1-inch fire hose, with no segment longer than 50-feet;
3. Fire hose with nozzle closed shall be capable of withstanding 200 psi pump pressure without leaking, slipping of couplings, distortions, or other failures;
4. Nozzle discharge rating of six to 20 gallons per minute;
5. A pump capable of delivering 23 gallons per minute at 175 pounds psi at sea level;
6. Power unit for pump shall have fuel for at least 2-hours operation, with ample transport available for immediate and safe movement of tank over roads serving the contract area; and
7. Pump outlet shall be equipped with 1-1/2 inch National Standard Fire Hose thread.

1.7.4.7.3 Support Truck

Constructor shall provide one support truck for each heavy piece of equipment operating solo while mobile. The support truck shall follow the heavy equipment as it operates. As an example, as a grader grades a road, a support truck shall follow. This does not apply to a water truck.

TRANSMISSION LINE PROJECT FIRE PLAN

1.7.4.8 For Heavy Construction Operating Equipment

For Project Activity Level C or higher, Constructor shall furnish and have available for emergency use on each heavy construction operating equipment used in conjunction with performance of the work additional firefighting capabilities as follows:

- A. An onboard self-extinguishing fire suppression system capable of extinguishing any equipment caused fire, or
- B. A portable Class A fire suppression system capable of extinguishing a 20-foot by 20-foot wild land fire within 5 minutes of discovery. The Class A system shall meet the following specifications:
 - 1. 100-feet of 1-inch hose,
 - 2. Minimum discharge distance of 50-feet,
 - 3. Minimum pressure of 100 psi at discharge orifice, and
 - 4. Sustainable for minimum of 5 minutes.

1.7.4.9 For Central Mobilization Area

For Project Activity Level C or higher, Constructor shall equip a centrally designated mobilization area, or at a concentrated long term project work area one sealed box of firefighting tools. The box shall be sealed with a Forest Service seal to be broken for emergency use only. The box shall be unlocked during transmission line project construction activities.

The box shall contain:

- 1. Three (3) five gallons backpack pump-type fire extinguishers filled with water;
- 2. Five (5) shovels;
- 3. Five (5) axes;
- 4. Five (5) McCleod fire tools;
- 5. One (1) serviceable chain saw of 3-1/2 or more horsepower with a cutting bar 20-inches in length or longer.

TRANSMISSION LINE PROJECT FIRE PLAN

1.7.4.10 For Tractor Dozer

For Project Activity Level C or higher, Constructor shall furnish two (2) tractor headlights for each tractor dozer. Tractor headlights shall be attachable to each tractor and served by an adequate power source.

1.7.5 EMERGENCY MEASURES

- A. The table set forth below establishes work restrictions and fire precautions that the Constructor shall observe at each project activity level. The restrictions are cumulative at each level.
- B. Constructor shall conform to the limitations or requirements of Project Activity Level (PAL) obtained from Forest Service before starting Work each day. If practicable, Forest Service will determine the following day's activity level by 4:00 p.m. each afternoon. Activity level may be changed at any time if, in the judgment of the Forest Service, fire danger is higher or lower than predicted and such change is consistent with forest management objectives. The decision to change the activity level, and when, and how to take weather observations for that purpose, are within the discretion of Forest Service.
- C. Project Activity Level applicable to this project shall be for Fuel Model G, National Fire Danger Rating System, and Remote Automated Weather Station (RAWS) or fire danger rating area stated in the legend of Project Area Map.

TRANSMISSION LINE PROJECT FIRE PLAN

PROJECT ACTIVITY LEVELS

Project Activity Requirements

Level

- A** 1. As required by Sections 1.7.4.1 through 1.7.4.6 above.
- B** 1. As required by Sections 1.7.4.1 through 1.7.4.7 above.
2. Furnish fire patrolperson. A fire patrolperson is required for mechanical operations, including equipment with high speed rotary heads (i.e., > 1,100 RPM) from cessation of operations until 2-hours after operations cease or sunset, whichever occurs first.
- C** 1. As required by Sections 1.7.4.1 through 1.7.4.10 above.
2. Fire patrolperson is required until sunset local time.
3. The following operations are prohibited from 1:00 PM until 8:00 PM local time:
- a) Blasting
 - b) Dead tree felling (with high speed rotary head), limbing, or bucking except recently dead trees.
 - c) Operating high speed rotary head equipment.
- D** 1. As required by Sections 1.7.4.1 through 1.7.4.10 above
2. The following operations are prohibited between hours of 10:00 AM and 8:00 PM local time:
- a) Blasting;
 - b) Mechanized operations for felling (with high speed rotary head), bucking, and limbing; and
 - c) Felling dead material.

TRANSMISSION LINE PROJECT FIRE PLAN

(Cont'd)

Project Activity Requirements

Level

- D** 3. The following activities may not operate between hours of 1:00 PM and 8:00 PM local time except by special permit:

- a) Rubber Tired Skidding
- b) Chipping on Roads or Landings
- c) Cable Yarding
- d) Welding or Cutting of Metal
- e) Road Maintenance
- f) Culvert Installation
- g) Dirt Moving
- h) Helicopter Yarding
- i) Hand Slash Disposal
- j) Chainsaw Operations on Landings and Roadbeds

4. Other operations may continue after 1:00 PM local time, if they meet the following requirements:

A fire patrolperson is required to walk all areas treated that day once per hour, until sunset local time. This includes chainsaw felling, metal track skidding, machines with chainsaw cutting heads and mastication equipment.

- Ev** 1. As required by Sections 1.7.4.1 through 1.7.4.10 above

2. The following activities may operate:

- a) Loading of trucks at landing and hauling
- b) Equipment at approved sites may be serviced
- c) Roads: Dust abatement or rock aggregate installation (does not include pit development)

3. Other operations may continue until 1:00 PM local time when Constructor and Forest Service agree to variance.

TRANSMISSION LINE PROJECT FIRE PLAN

- E
1. As required by Sections 1.7.4.1 through 1.7.4.10 above.
 2. The following activities may operate:
 - a) Loading of trucks at landing and Hauling
 - b) Equipment at approved sites may be serviced
 - c) Roads: dust abatement or rock aggregate installation (does not include pit development)

1.7.6 REPORTING FIRES

Constructor shall report all fires to any of the following Forest Service facilities and/or personnel listed below, but not necessarily in the order shown:

	Name	Address and/or Telephone Number
Dispatch Center		
Nearest FS Station		
Inspector		
COR		
District Ranger		
D.R. Designated Rep		

When reporting a fire, provide the following information:

- A. Your Name
- B. Call back Telephone Number
- C. Project Name
- D. Location
- E. Legal Description (Township, Range, Section); and Descriptive location (Reference point)

Fire Information:

- F. Acres;
- G. Rate of Spread; and
- H. Wind Conditions

TRANSMISSION LINE PROJECT FIRE PLAN

Constructor's Plan Regarding Personnel, Equipment and Organization

The Constructor shall, prior to commencing work, furnish the following information relating to key personnel, tools and equipment available for the purpose of fighting wild fires within and adjacent to the Contract Area:

KEY PERSONNEL: (In order of call preferences)

	Name	Address and/or Telephone Number
Fire Supervisor		
Fire Patrolperson		

PERSONNEL AND EQUIPMENT:

	Number	Classification, Type, Make & Model
Fire Fighters		
Fallers		
Power Saws		
Other Equipment		

Contractor's Signature

Date

Contractor's Officer's Signature

Source: EMFAC2021 (v1.0.2) Emissions Inventory

Region Type: Air Basin

Region: Mojave Desert

Calendar Year: 2025, 2026, 2027

Season: Annual

Vehicle Classification: EMFAC2007 Categories

Units: miles/day for CVMT and EVMT, trips/day for Trips, kWh/day for Energy Consumption, tons/day for Emissions, 1000 gallons/day for Fuel Consumption

Table 2: On-Road Fuel Efficiency (gallons/mile)

Vehicle Category	Year	Fuel	Efficiency	Lookup
passenger	2026	Gasoline	25.87	passenger_Gasoline
vendor	2026	Gasoline	5.18	vendor_Gasoline
hhdt	2026	Gasoline	4.02	hhdt_Gasoline
passenger	2026	Diesel	30.89	passenger_Diesel
vendor	2026	Diesel	9.21	vendor_Diesel
hhdt	2026	Diesel	6.29	hhdt_Diesel

One Innovation Way
Pomona, CA 91768

Subject: Geotechnical Investigation Report for Proposed Eagle Mountain-Blythe (WALC) Transmission Line Project, Riverside County, California.

Dear Mr. Tsarev

Geotechnical Soilutions Inc., is pleased to present this report presenting the results of our geotechnical investigation conducted in support of the design of the proposed improvements to the Eagle Mountain-Blythe (WALC) Transmission Line project.

This report presents the results of our field investigation, laboratory testing and analysis, and provides our conclusions and recommendations for geotechnical design parameters for the geotechnical aspects of the project.

Geotechnical Soilutions Inc., previously presented a Geotechnical Data Report, dated July 28, 2020, presenting the results of our field investigation and laboratory testing. We have now been authorized to prepare a complete geotechnical report, and this report is intended to provide geologic and geotechnical site conditions for SCE's design and construction of the project.

We appreciate the opportunity to be of service on this project. If you have any questions regarding this report, or if we may be of further assistance, please contact the undersigned.

Respectfully Submitted,
Geotechnical Soilutions, Inc.,
Mesrop A. Mesrop
Geotechnical Engineer

PCC – Portland Cement Concrete

PCF – pounds per cubic foot

PSF – pounds per square foot

SCE – Southern California Edison

SPT – Standard Penetration Test

SSPWC – Standard Specifications for Public Works Construction

USGS – United States Geological Survey

1.0 Introduction

Based on the Scope of Work provided, the project will consist of replacement of wooden H-frame and three wood pole structures at angle points and dead ends over the approximately 54-mile length of the existing transmission line stretching from Eagle Mountain on the west to the Blythe area to the east. The transmission line alignment is shown on the attached Transmission Line Location Map Figure A-1 and Geologic Map Figure A-2 in Appendix A.

Twenty-four borings were planned along the alignment, however boring B-7 was eliminated and twenty-three borings were drilled and sampled.

For our field investigation, Southern California Edison staff provided a KMZ map showing the 24 boring locations in the area of the transmission line. Based on our field reconnaissance prior to drilling operations, the locations of the borings were adjusted slightly to avoid overhead conductors and, in some cases, for environmental or site access concerns.

2.0 Project Description

2.1 Site Location and Description

The area of the Transmission Line Project is located primarily in desert terrain in the area between the Eagle Mountain Substation at the west end to the Blythe area Substation to the east, as shown on Figure A-1. Most of the borings were located in undeveloped, remote desert areas accessed by poor to moderately maintained dirt powerline roads. The subject transmission line is between Eagle Mountain Substation and Blythe Substation in Riverside County. Boring B-1 was located within the Eagle Mountain Substation, and boring B-24 was located just outside the Blythe Substation perimeter.

Project includes replacement of some of the existing wood poles with single, double and triple tubular steel poles supported on pier foundation, estimated at least 6 feet in diameter.

The boring locations are indicated on the attached Geologic Map Figure A-2, and Figures A-4 to A-14 in Appendix A.

A summary of TSP and Boring Locations with coordinates are shown in Table D-1 in Appendix D.

2.2 Purpose and Scope

The scope of services utilized is as follows:

- Field reconnaissance.
- Marking boring locations and contacting Underground Dig Alert

- Geophysical survey of each location on the day of the drilling to determine if underground utilities were present.
- Subsurface investigation consisting of drilling and sampling of twenty-three Hollow Stem Auger borings.
- Laboratory testing performed by AP Engineering.
- Summary of the collected data presented on the logs of borings and laboratory test results In Appendices B and C.
- Presentation of our conclusions and recommendations based on the results of our geologic and geotechnical analyses.

3.0 Field Exploration & Laboratory Testing

The scope of our investigation included a review of existing information, site reconnaissance, subsurface exploration for geotechnical soil sampling and laboratory testing and preparation of this report.

3.1 Site Marking

Drilling sites were marked with a wood stake painted white for Underground Service Alert.

3.2 Utility Clearance

Prior to beginning our field exploration program, we marked our proposed boring sites in the field for Underground Service (USA) clearance. We then contacted USA to identify potential conflicts between the planned boring locations and existing underground utilities. No conflicts with buried utilities were identified.

3.3 Geophysical Survey

A geophysical survey was performed by Spectrum Geophysics on the day of drilling at each boring site prior to the start of drilling to identify and mark underground utilities. Although no utilities were present at the drill sites, many of the proposed drill sites had been slightly relocated during the initial boring location process to provide clearance from overhead power lines, sensitive environmental areas, or at locations where equipment access was limited due to loose, sandy soils.

3.4 Permits

No permits were required to conduct the borings.

3.5 Field Exploration

Hollow stem auger borings were completed at twenty-three locations, ranging in depth from 10 to 50 feet. Boring B-1 was terminated at a depth of 10 feet due to the rocky,

caving conditions of the unconsolidated rock fill placed during grading of the substation. Borings B-2 to B-5 were terminated at depths ranging from 20 to 25 feet due to rocky conditions.

Sampling utilized both Modified California (MC) and Standard Penetration Test (SPT) sampling equipment to obtain relatively undisturbed drive samples of the soil encountered. The MC and SPT samplers were driven using a 140-pound hammer falling 30 inches. The number of hammer blows required to drive the sampler in three six- inch increments is termed the blow count and is recorded on the boring logs. The blow counts recorded on the Logs of Borings are the recorded field blow counts, and have not been corrected for sampler types, rod length, overburden pressure, sampler's liner or hammer energy. Sampler liners were not used with the SPT samplers. MC and SPT samples were obtained at approximate 5- foot intervals. The boring logs are presented in Appendix B. The borings were drilled near the locations provided to us by SCE, with adjustments to provide clearances from overhead lines or for environmental or access issues.

Samples were retrieved, sealed, and transported to AP Engineering laboratory for testing. All borings were logged by a certified engineering geologist.

3.6 Soil Cutting and Backfilling

The borings were backfilled with soil cuttings and the area restored to original conditions as much as possible.

3.7 Geotechnical Laboratory Testing

Representative samples of the site soils were tested in AP Engineering laboratory to aid in the soil classification and to evaluate relevant engineering properties of the site soils. The results of AP Engineering tests are presented in Appendix C. These tests included:

- ◆ In situ moisture contents and dry densities (ASTM Standard D2216)
- ◆ Grain size distribution and Percent Passing Sieve No. 200 (ASTM Standards D6913/D1140)
- ◆ Atterberg Limits (ASTM D4318)
- ◆ Maximum dry density and optimum-moisture content relationship (ASTM Standard D1557)
- ◆ Direct shear (ASTM Standard D3080), undisturbed and remolded
- ◆ Expansion Index
- ◆ Soil corrosivity tests (Caltrans 643, 422, 417, and 532)

4.0 Geologic Setting

The project site includes an existing 161 kV transmission line along an approximately 54-mile-long transmission line corridor in desert terrain within the Mojave Desert Geomorphic Province, an area characterized by isolated mountain ranges separated by wide

expanses of interior valley terrain. As shown on the attached geologic map (Geologic Map of California Salton Sea Sheet), Figure A-2 in Appendix A, most of the alignment is within the Chuckwalla Valley as well as other, un-named, southerly draining valleys in the eastern portion of the alignment. Chuckwalla Valley is a broad, nearly east-west trending valley that receives surface runoff and deposition of alluvial sediments from mountain ranges to the north and south ending in an interior basin at Ford Dry Lake. The eastern end of the alignment is within Palo Verde Valley, one of several valleys that the Colorado River occupies. Although the transmission line passes near several mountain ranges, including Eagle Mountain to the west, Coxcomb, Palen, and McCoy Mountains to the north, and the Chuckwalla Mountains to the south, no bedrock was encountered in the borings.

Within the Chuckwalla Valley, the transmission line traverses several alluvial soil/geologic units of Recent and Pleistocene age, including coarsely granular alluvial fan deposits, generally fine-grained valley alluvial deposits, sand dune deposits, and lacustrine deposits. No bedrock was encountered at the boring locations.

The soils characteristic encountered in the borings is as follows:

- Rock Fill of Cobbles and Boulders: Boring B-1 in the Eagle Mountain Substation pad encountered a rock fill of mostly boulders up to several feet in diameter with little or no soil matrix in between. The boring was terminated at 10 feet due to refusal. Similar rocky conditions were observed in the perimeter slopes of the substation pad. Although the thickness of the rock fill was not determined, based on the elevation of the pad relative to the surrounding terrain, it is probably on the order of 20 feet. Boring B-1 was difficult to drill due to the rock hardness, over-breaking, and caving due to the lack of soil matrix material between the boulders.
- Gravelly and Cobble Sands: Borings B-2 to B-8 encountered coarsely granular alluvial fan deposits consisting of gravelly and cobble sands with boulders in the area near and east of the Eagle Mountain Substation.
- Coarsely Granular Sand: Borings B-10 to B-12 also encountered coarsely granular sand in an alluvial fan complex north of the Chuckwalla Mountains.
- Silty Sand: Borings B-9, B-13 to B-16, and B-18 encountered primarily silty sands within the Chuckwalla Valley.
- Primarily Sand: Borings B-17 and B-19 to B-24 encountered primarily sands, also within the Chuckwalla and Palo Verde Valleys.

The approximate location of the transmission line is indicated on the attached Geologic Map, Figure A-2 in Appendix A.

5.0 Site Conditions

5.1 General

This section contains a general description of the subsurface conditions and various materials encountered at the site during the field exploration and a discussion of laboratory test results.

5.2 Subsurface Conditions

Based on the boring logs by Geotechnical Soilutions Inc., alluvial deposits of predominantly sand and gravel, slightly clayey and silty, were encountered to the total depth drilled (50 feet). The exception is the Eagle Mountain Substation pad, which is a rock fill as described above in the Geologic Setting section.

5.3 Groundwater

Groundwater was not encountered in all borings drilled to maximum 50 feet depth. The depth to groundwater along the alignment was checked utilizing the Department of Water Resources Water Data Library. The depth to groundwater in the east portion of the alignment is 90 feet. In the east portion of Chuckwalla Valley, the depth to groundwater ranges from 150 to 250 feet from ground surface. In middle portion of Chuckwalla Valley, the depth to groundwater is approximately 170 feet. In the west portion of the alignment near Eagle Mountain, the depth to groundwater is 75 feet.

5.4 Geotechnical Laboratory Testing Results

Laboratory testing was performed to determine the physical characteristics and engineering properties of the subsurface soils. Results of in situ moisture and dry density tests are presented on the Borings Logs in Appendix B, and remaining test results are included in Appendix C, Laboratory Testing Program.

6.0 Faulting

Based on the available geologic data, no portion of the transmission alignment is in a designated Alquist-Priolo Earthquake Fault Zone. The active San Andreas Fault is located approximately 30 miles to the southwest of the west end of the transmission line at the Eagle Mountain substation. A Fault Map is presented in Appendix A, Figure A-3.

The potential for surface rupture at the site due to fault plane displacement propagating to the ground surface during the design life of the project is considered nil. An active fault is defined as one that has had surface displacement within Holocene time (about the last 11,000 years).

Although the site could be subjected to strong ground shaking in the event of an earthquake, this hazard is common in Southern California and the effects of ground

shaking on the structures can be mitigated by proper engineering design and construction in conformance with latest version of California Building Code (CBC).

7.0 Summary of Engineering Conclusions

7.1 Fault Rupture

The site is not located in an Alquist-Priolo Earthquake Fault Zone and the closest active fault is approximately thirty miles away. The potential for fault rupture is considered to be nil.

7.2 Liquefaction

Liquefaction is defined as the phenomenon in which a soil mass due to the development of excess pore pressures, suffers a substantial reduction in its shear strength. During earthquakes, excess pore pressures may develop in saturated soil deposits as a result of induced cyclic shear stresses, resulting in liquefaction. Soil liquefaction occurs in submerged fine granular soils during or after strong ground shaking. Groundwater was not encountered in all borings drilled to maximum 50 feet depth, therefore there is no potential for liquefaction at the site.

7.3 Slope Stability

The proposed transmission line is located in flat terrain. The potential for slope stability is nil.

7.4 Collapsible Soils

Collapsible soils are defined as soils with a potential for a significant decrease in strength and increase in compressibility when wet or saturated (hydro-collapse). Collapsible soils typically consist of relatively sandy soils that exhibit a degree of cementation such as loess (fine-grained wind deposited soil) deposits, valley alluvium deposits within a semi-arid to arid climate, and residual soil deposits that exhibit a degree of cementation. The degree of collapse for a soil sample is defined by the collapse potential value, which is expressed as a percent colipase of the total sample.

No laboratory testing was conducted to determine the collapse potential of the soil. Since the proposed TSP's will be supported on deep foundations, hydro consolidation (collapse) of the near surface soils, if it occurs, should not significantly impact the TSP's.

7.5 Flood Hazard

Based on Flood Hazard Maps published by the Federal Emergency Management Agency (FEMA) online service, the study area lies in an area with no special flood hazard areas. Based on our field observations, although not zoned by FEMA, the areas of the highest risk are where TSP's are located directly within or adjacent to existing drainage

channels and washes. A list of TSP's within potential erosion zones are included as part of the Summary of Geologic Impact Table D-2 in Appendix D.

7.6 Erosion and Scour

Table D-2, Geologic Impact, lists those structures that may be subject to erosion and scour, based on field observations of the heights of wash channel walls. No structures are located within major drainage channels, however some structures located east of Eagle Mountains and north of Chuckwalla Mountains are in shallow drainages that exhibit the potential for erosion and scour on the order of 12-24 inches. The structures listed in Table D-2 in Appendix D with erosion and scour potential are within shallow wash areas that are subject to periodic flooding and erosion during intense rainfall events.

8.0 Design and Construction Recommendations

8.1 General Evaluation

The various design recommendations provided in this section are based on the assumption that the recommendations presented in this report will be implemented in design and construction of the TSP's foundations.

Based on the results of our field and laboratory investigations, it is our opinion that the proposed transmission line TSP's can be adequately supported on a system of drilled piers. Anticipated soil conditions vary in strength, density and in engineering characteristics along the project alignment. For that reason, design of the TSP foundations should take into account the similar soil properties in the areas where such similarities exist.

8.2 Methodology for Assigning Soil Design Parameters

The tables listed below summarize the coordinates, structure type, soil grouping, geologic impact including erosion potential, sulfate exposure and design parameters:

TABLE D-1: Summary of TSP & Soil Boring Locations,

TABLE D-2: Summary of Geologic Impact,

TABLE D-3: Summary of Drilled Pier Geotechnical Design Parameters

The tables are included in Appendix D.

Soil borings were performed near the locations of the proposed TSP's construction. For design simplicity, the entire project alignment was categorized into 5 soil profile types based on density and engineering properties.

Where the soil classification, soil strength and engineering properties were similar, the TSP's/ borings were grouped and provided with the same soil densities and strength parameters for design purposes. Design recommendations are typically based upon

average values of soil strengths for each layer encountered, which we obtained from both field and laboratory investigations.

The designer should use factors of safety in accordance with the latest SCE requirements when calculating allowable capacities for skin friction and for bearing capacity. The use of end bearing support assumes that the drilled pier will be cleaned of slough of loose material prior to pouring concrete. In the event that adequate cleaning proves difficult, we recommend the contractor be prepared to compact or densify loose soils using a board to tamp the bottom of the pier. Conversely, if proper tamping of the soil at the bottom of the pier cannot be performed, end bearing capacity should be neglected in pile capacity calculations. The TSP's are not located in the immediate vicinity of slopes. However, if any TSP is located within 10 feet of the top of a descending slope, the lateral support should be neglected to a depth where 10 feet or 2 pier diameters exist between the face of the slope and the edge of the pier.

8.3 Design Parameters

The design parameters for each soil boring/ TSP are provided in the Summary of Drilled Pier Geotechnical Design Parameters Table D-3 in Appendix D.

The soil parameters presented in the Design Summary Sheet represent ultimate values which require the use of appropriate factors of safety.

Pole 1604703E is located inside Eagle Mountain Substation. Based on boring B-1, the substation pad has rock fill consisting of mainly boulders with little soil matrix material. As indicated in the previous sections, the rock fill could extend down to 20 feet. Difficult drilling is expected at this location due to boulders and high caving potential. A large diameter pier will help removal of the boulders and facilitate the construction of the pier in this specific rock fill. The pier should penetrate the rock fill and be embedded a minimum 5 feet into the native soil. Thus, the total depth of the pier should be at least 25 feet. The following options could be used in the design and construction of the piers, and are addressed in the Drilled Pier Installation section below:

- Casing
- Pilot hole filled with slurry
- Shallow spread footing, additional design recommendations will be provided.

See Table D-2, Summary of Geologic Impact, in Appendix D for list of poles for sulfate exposure.

8.4 Drilled Pier Installation

Excavation and construction of the drilled piers shall be observed by a qualified representative of the Geotechnical Engineer. Severe caving is expected due to dry sandy soils during the drilling of the pier foundation excavations. Highest caving potential is expecting in soil groups SG-1 and SG-3. Casing, drilling mud, or other means to control caving should be made available and should be used when needed to ensure integrity of the piers.

As described in the previous sections, 20 feet of rock fill is anticipated at the location of boring

B-1, inside Eagle Mountain Substation. Based on our experience with similar sites and rockfill conditions, a pilot hole larger than the diameter of the designed pier foundation could be drilled and/ or excavated and filled with slurry first. After the slurry is completely solidified, the actual pier foundation could be drilled and constructed. Another option is to use casing or other means to control caving in rock and prevent loss of concrete. If casing method is used, all gaps outside the casing, due to the installation process, should be filled with slurry. Depending on the size and location of the gaps, pressure grouting may be considered. The slurry should be according to SCE specification.

We recommend the contractor be prepared to compact or densify loose soils using a board to tamp the bottom of the pier excavations.

8.5 Soil Corrosivity Evaluation

Soil corrosivity was evaluated based on representative samples from borings within the upper 15 feet depth. Test results are summarized in the table below. The sulfate exposure is summarized in Table D-2, Summary of Geologic Impact, in Appendix D.

Test Location	Soil Classification	Minimum Saturated Resistivity, ohm-cm	pH	Sulfate Content, ppm	Chloride Content, ppm
B-2 @ 0-5'	Silty Sand	737	8.2	162	737
B-3 @ 15'	Silty Sand	1,789	9.2	116	85

B-22 @ 7'	Sand	7,409	9.4	51	25
B-23 @ 7'	Sand	2,010	9.2	55	220
B-24 @ 0-5'	Silty Sand	7,513	9.0	25	39

8.6 Geotechnical Observation

Prior to construction, the SCE Project Manager for Construction or representative should contact SCE Geotechnical Group to coordinate field observations during construction.

The contractor should comply with the jurisdictional requirements of city and county prior to commencement of construction. The governmental agencies having jurisdiction over the project should be notified prior to beginning of construction. The contractor should be familiar with the inspection requirements of the SCE, reviewing agencies and the content of this report.

Pier drilling should be observed by the Soils Engineer/Engineering Geologist prior to placement of steel and concrete so that piers are founded on satisfactory materials and excavations are free of loose and disturbed materials. Continuous observation by the soil engineer or representative during construction allows for evaluation of the soil conditions as they are encountered, and allows the opportunity to recommend appropriate revisions where necessary.

APPENDIX C

LABORATORY TESTING

GENERAL

Laboratory tests were performed on selected samples as an aid in classifying the soils and to evaluate physical properties of the soils that may affect foundation design and construction procedures. The tests were performed by AP Engineering and Testing, Inc. in Pomona, California in general conformance with the current ASTM or California Department of Transportation (Caltrans) standards. A description of the laboratory testing program is presented below.

MOISTURE AND UNIT WEIGHT

Moisture content and dry unit weight tests were performed on selected samples recovered from the boring. Moisture contents were determined in general accordance with ASTM Test Method D 2216; dry unit weight was calculated using the entire weight of the samples collected.

SIEVE ANALYSES

Sieve analyses were performed on selected samples of the materials encountered at the site to evaluate the grain size distribution characteristics of the soils and to aid in their classification. Tests were performed in general accordance with ASTM Test Method D 6319.

ATTERBERG LIMITS

One Atterberg limits test was performed on soil samples to aid in classification and to evaluate the plasticity characteristics of the materials. The testing was performed in general accordance with ASTM Test Method D4318.

DIRECT SHEAR TEST

Selected samples were subject to direct shear testing in order to evaluate the shear strength of the in-situ soils in accordance with ASTM Standard Test Method D3080. Shear stress versus shear deformation and shear strength versus normal stress plots are presented on the test report as well as the friction angle and cohesion values determined.

SOIL CORROSIVITY TESTS

A series of chemical tests were performed on selected samples of the near-surface soils to estimate pH, resistivity and sulfate and chloride contents. The samples were tested for pH and minimum resistivity, soluble chlorides, and soluble sulfates, respectively. The tests were performed by AP Engineering and Testing of Pomona, California. Test results can be used by a qualified corrosion engineer to evaluate the general corrosion potential with respect to construction materials.

MAXIMUM DENSITY

Collected soil samples were tested to evaluate the moisture-density relation of the on-site soils in accordance with ASTM Standard Test Method D 1557, Method A, B or C. From this test, the maximum dry density and optimum moisture content of the on-site soils were determined.

EXPANSION INDEX

Expansion index testing was performed on bulk samples of the near-surface soils to evaluate its expansion characteristics. The test was performed in accordance with ASTM 4829.

Depth to Ignore in Pier Design (Feet)	5	Refer to Table D-2	Refer to Table D-2	Refer to Table D-2	Refer to Table D-2

NOTES;

1. Pole 1604703E is located inside Eagle Mountain Substation. The substation pad has rock fill, probably on the order of 20 feet, consisting of mainly boulders with little soil matrix material. Difficult drilling is expected at this location due to boulders and high caving potential. The pier should penetrate the rock fill and be embedded a minimum 5 feet into the native soil. Thus, the total depth of the pier should be at least 25 feet. The following options could be used; construction of the pier using casing, pilot hole backfilled with slurry first before drilling for the actual pier foundation, and shallow foundation. For additional information refer to Design Parameters and Drilled Pier Installation sections of the report.
2. Severe caving is expected due to dry sandy soils during the drilling of the pier foundation excavations. Highest caving potential is expecting in soil groups SG-1 and SG-3. Casing, drilling mud, or other means to control caving should be made available.
3. Pole 1580928E, B-7 was canceled.
