

Nest Survey Report

Date: 05/30/2017

Biologist(s): Amy Trexler

Survey Area/Location/Structures:

Stations: 15 to 30

Segment 5 - Section 1 and part of section 2

Proposed Construction within Survey Area:

Proposed construction activities include pot-holing and excavation and trenching for installation of new underground 230kV line and vaults.

Is Vegetation Clearing Required? Yes:	No: 🗵
Was Complete Survey Coverage Achieved? Yo	es: 🛛 No: 🗆

Details of modifications to the survey area if complete coverage was not achieved: N/A

End

Survey Conditions:

1:30 pm	2.15
1.50 pm	3:15 pm
65 °	68 °
0-5 mph	0-5 mph
90%	75%
n/a	n/a
	65 ° 0-5 mph 90%

Habitat(s) and Vegetation Description within Survey Area:

- o Southern coast live oak riparian forest
- Southern willow riparian forest
- Coastal sage scrub
- Ornamental
- Disturbed

Description of Survey Methodology:

The biologists conducted active and passive surveys within a survey buffer of 0.25 mile for white tailed kite, 500 feet for raptors, coastal California gnatcatcher, and least Bell's vireo, 250 feet for passerine birds in open space, and 150 feet for common passerines in residential, commercial and industrial areas. Active survey methods included walking meandering transects through the habitats while observing bird behavior with the aid of binoculars and directly searching in vegetation, the ground, the towers/poles, and other potential nest substrates. Passive survey methods included stationary observation periods from select vantage points that provided maximum visibility of the survey areas, using binoculars as necessary. If potential nesting behavior was observed within the survey buffers, specific shrubs were directly searched for nests in the areas where birds may have been observed exhibiting higher levels of activity or potential breeding behavior. All potential raptor nesting areas within the survey buffers were searched directly and/or with the aid of binoculars. Visibility, access, time of year and weather conditions were all conducive to collecting comprehensive breeding data, and ample time was spent surveying all potential nest sites.

Suitable Raptor Nesting Habitat: Suitable CAGN Nesting Habitat: Suitable LBV Nesting Habitat: Survey Results	Yes: ⊠ Yes: ⊠ Yes: ⊠	No:
Nest(s) Located (complete table below if yes)*: (Include previously located nests and current status)	Yes: ⊠	No:

Nest ID¹	Species ²	Listing Status ³	Nest Stage ⁴	Observation Notes ⁵	Latitude (decimal degrees)	Longitude (decimal degrees)
03212017_BSL_01	American	Common	Fledglings	3/21- Pair observed	32.88932	-117.20317
	kestrel			entering into north		
				arm of existing steel		
	(AMKE)			tower (Z119817).		
				Nest material blew		
				out of nest cavity;		
				CB		
				3/29- One adult		
				observed perched		
				on top of tower;		
				possibly incubating		
				4/13- No activity		
				observed, possibly		
				incubating.		
				5/10- Adult		
				observed bringing		
				food into the nest.		
				Number of chicks		
				unknown due to		
				location of nest		
				inside pole.		
				5/23- Observed one		
				fledgling perched		
				on a wooden power		
				pole along with the		
				adults. Potentially		
				other chicks in the		
				nest that have not		
				fledged yet.		
				5/30- No activity		
				observed at nest, no		
				birds in the vicinity		
				of nest. All chicks		
	1			might have fledged.		

^{1 –} Date (mmddyyy)_Biologist Initials (ABC)_Number ID (01)
2 – Include common name and four letter AOU species code
3 – 3 – Federally Endangered (FE), Federally Threatened (FT), State Endangered (SE), State Threatened (ST), Species of Special Concern (SSC), Watch

^{5 – 5 –} Federany Endangered (FE), Federany Infreatened (FI), State Endangered (SE), State Infreatened (SI), Species of Special Concern (SSC), water List (WL), Common

4 – Building, Incubating, Nestling, Fledged, Complete/Inactive

5 – Observation Notes: Item Carry (IC- nest material, food items, fecal sacs that indicate nesting in progress), Agitated/Territorial Behavior (ATB – indicating potential nest sites or an intent to nest), Courtship Behavior (CB – copulation, chasing flights, displays, etc.), Pair in Suitable Habitat (PSH – utilizing all or portions of the buffer zone), Other

Avian Species Observed (complete common name):

American crow (AMCR), Anna's hummingbird (ANHU), bushtit (BUSH), California gull (CAGU), California towhee (CALT), European starling (EUST), house finch (HOFI), house wren (HOWR), lesser goldfinch (LEGO), mourning dove (MODO), pacific-slope flycatcher (PSFL), red-tailed hawk (RTHA), song sparrow (SOSP), spotted towhee (SPTO), white-throated swift (WTSW), and wrentit (WREN).

<u>Additional Notes (see Avian Species Observed and Observation Notes for definition of abbreviations):</u>

• Song sparrow, lesser goldfinch: pairs observed in suitable habitat and displaying territorial behavior.

Nesting WTKI within 0.25 miles:	Yes:	No: 🛛
Nesting Raptor, CAGN, or LBV within 500 feet:	Yes:	No:
Nesting Passerine within 250 feet (open space only):	Yes:	No: 🖂
Nesting Passerine within 150 feet (residential,	Yes:	No: 🖂
commercial residential areas).		

Establishment of Nest Buffer and Justification:

03212017_BSL_01- A nest buffer reduction request was approved by the CPUC on March 31, 2017. No changes or modifications to this nest buffer reduction request are required or recommended.
