Subject: Edison High Tension Transmission Line Through Leona Valley

Dear John Boccio,

My name is Bernhard Staschik and I am writing you as a resident of Leona Valley, as a husband, and father of two children (1yr and 3 years old). In March of 2005 we purchased a house on 107th Street in Leona Valley, falling in love with the property and the secluded location set against the National Forest.

My understanding is that these high transmission lines will run along a corridor behind 107th Street and then cross the community of Leona Valley in its entire length. It is also my understanding that there has been an ongoing series of CEQA scoping meetings and that the deadline to respond to the Draft Environmental Impact Report (DEIPR) is September 18th with a last series of 3 meetings starting today in the Auditorium in Lane Park, Quartz Hills.

Much to my dismay the community of Leona Valley just learned about this proposed corridor through the newspaper this last weekend. For a project of this magnitude the gravity of your oversight to inform this community is unacceptable and unexcusable. As a concerned father, husband, homeowner and Leona Valley resident I demand an explanation why we have not been informed. I also demand an extension of the deadline to respond to the Draft Environmental Impact Report (DEIPR).

C.7-1

Conduct yourself accordingly,

Bernhard Staschik

Response to Comment Set C.7: Bernhard Staschik

- C.7-1 Please see General Response GR-5 regarding the noticing procedures for an EIR/EIS. On September 13, the CPUC and the Forest Service formally extended the public review period for the Draft EIR/EIS to October 3, 2006.
