

A **visual simulation** of the Proposed Project from Key Viewpoint 1 on eastbound San Timoteo Canyon Road, immediately north of the El Casco Substation site. This view is to the south toward the proposed substation, which is location in the Norton Younglove Reserve, immediately south of San Timoteo Canyon Road and the adjacent Southern Pacific rail line. The proposed transmission structures that would service the substation and some of the substation facilities would be prominently visible from San Timoteo Canyon Road where the adjacent vegetation is sparse.
