

The **existing view** to the east toward the Top of the World alternative substation site, on undeveloped watershed lands of Vista Irrigation District. This view is from Henshaw Overlook, off of SR 76 and just northwest of Lake Henshaw. The Top of the World site is located just beyond the furthest ridge to the east (as indicated in the image above). At a substantial viewing distance of approximately 8.5 miles, the substation would not be noticeable to viewers at the overlook, though some upper portions of the taller substation components may be visible.
