

Michael Clayton & Associates

A **visual simulation** of the I-8 Alternative as it passes north of the community of Jacumba. This view to the north-northeast from Key Viewpoint 49 on Jacumba Street, just north of Calexico Avenue, shows the I-8 Alternative adjacent and to the north of the existing SWPL line. The lower portions of the new structures would be partially screened by the crest of the ridge but would still contribute noticeable structural elements to the landscape. Structures would be paired up and the conductor spans would be matched to the extent allowable by terrain variation.
