

The **existing view** to the south from Key Viewpoint 85 in the Elliot Mine Area, approximately three miles southeast of the access point off of Old Highway 80. The **BLUE** line in the center of the photograph shows the approximate northeastern boundary of the wind development area at the northern end of the Sierra de Juarez Mountains. As indicated in the image above, the northern extent of the wind development area would be prominently visible to the Elliot Mine Area, a popular back country recreation destination.
