RE: Sunrise Powerlink Project – Mitigation Measure Compliance
Mitigation Measure V-66a for Sunrise Powerlink Transmission Project

Ms. Coronado:

Transition cable poles in the Interstate 8/Chocolate Canyon area were moved 350 feet down slope to reduce the structural prominence and visual contrast.

The April 30, 2010 Mapbook illustrates changes to the final design of the alignment incorporating the fine-tuning of the transition structures to reduce structural prominence. The Mapbook was submitted to the CPUC on May 14, 2010. Additionally, final construction design plans have been submitted for review and approval to the CPUC on June 8, 2010.

Sincerely,

Jose Lopez, Project Manager – 230 kV Underground

Cc: Alan Colton, Manager – Environmental Services
