**Prevalence Index worksheet:**

Total % Cover of:	Multiply by:	
OBL species	0	x 1 = 0
FACW species	0	x 2 = 0
FAC species	10	x 3 = 30
FACU species	10	x 4 = 40
UPL species	50	x 5 = 250
Column Totals:	70 (A)	320 (B)
Prevalence Index = B/A = 4.5714		

**Hydrophytic Vegetation Indicators:**

1 - Rapid Test for Hydrophytic Vegetation  
 No 2 - Dominance Test is >50%  
 No 3 - Prevalence Index is ≤3.0<sup>1</sup>  
 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
 5 - Wetland Non-Vascular Plants<sup>1</sup>  
 6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

**Hydrophytic Vegetation Present?**

Yes ☐ No ☒

Remarks: Sample point dominated by FAC and UPL vegetation.

[illegible]

## WETLAND DETERMINATION DATA FORM -Arid West Region

v.110918

Project/Site: Zayo Fiberoptic Interconnect Project, Group #8 City/County: Lassen County Sampling Date: 9/11/2019  
 Applicant/Owner: Zayo Group State: California Sampling Point: SP 202-8 Feature ID: NW200-8  
 Investigator(s): M. Oats, T. Kayatsky, P. Ferral Section, Township, Range: S23, T32N, R15E  
 Local relief (hillside, terrace, etc.): Hillside Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 40.27587 Long: -120.48327 Datum: NAD83  
 Soil Map Unit Name: (287) Mottsville loamy coarse sand, 2 to 9 percent slopes NWI classification: PEM1C

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)  
 Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐  
 Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present? Yes ☒ No ☐  
 Hydric Soil Present? Yes ☐ No ☒  
 Wetland Hydrology Present? Yes ☐ No ☒

Is the Sampled Area within a Wetland? Yes ☐ No ☒

**Evaluation of features designated "Other Waters"**

Characteristics: Type: \_\_\_\_\_ Width: \_\_\_\_\_ Substrate: \_\_\_\_\_  
 Indicators: Defined bed and bank: \_\_\_\_\_ Scour: \_\_\_\_\_ OHWM Mapped: \_\_\_\_\_  
 Feature Designation: Perennial: \_\_\_\_\_ Intermittent: \_\_\_\_\_ Ephemeral: \_\_\_\_\_  
 Natural Drainage: \_\_\_\_\_ Artificial Drainage: \_\_\_\_\_ Navigable Water: \_\_\_\_\_

**Remarks:** Suspect area within previously mapped NWI feature confirmed as upland where hydric soil indicators and indicators of wetland hydrology are absent. Hydrophytic vegetation is found scattered with upland species lacking recent or regular drainage patterns.

**VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER**

### Wentworth Size Classes

Inches (in)	Millimeters (mm)	Wentworth size class
10.08	256	Boulder
2.56	64	Cobble
0.157	4	Pebble
		Granule
0.079	2.00	
0.039	1.00	Very coarse sand
0.020	0.50	Coarse sand
1/2 0.0098	0.25	Medium sand
1/4 0.005	0.125	Fine sand
1/8 0.0025	0.0625	Very fine sand
1/16 0.0012	0.031	Coarse silt
1/32 0.00061	0.0156	Medium silt
1/64 0.00031	0.0078	Fine silt
1/128 0.00015	0.0039	Very fine silt
		Clay

Feature ID: D011-9

Cross section ID:

Date:

Time:

Cross section drawing:OHWM

GPS point: \_\_\_\_\_

Indicators:

- ☒ Change in average sediment texture  
☐ Change in vegetation species  
☒ Change in vegetation cover

- ☒ Break in bank slope  
☒ Other: Some sediment sorting  
☐ Other: \_\_\_\_\_

Comments:

Defined bed and bank feature with scoured channel. OHWM evidenced by change in sediment texture, break in bank slope, and change in vegetation cover. Sediment sorting observed. Sampling point documents an ephemeral stream.

Floodplain unit:☒ Low-Flow Channel☐ Active Floodplain☐ Low Terrace

GPS point: \_\_\_\_\_

## WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Sampling Point: SP 011-9

Feature ID: W001-9

Project/Site: Zayo Fiberoptic Interconnect Project, Group #8

City/County: Lassen County

Sampling Date: 8/29/2019

Applicant/Owner: Zayo Group

State: California

Investigator(s): M. Williams, J. Ahn

Section, Township, Range: S16, T27N, R14E

Local relief (hillside, terrace, etc.): Hillslope

Local Relief (concave, convex, none): Concave

Slope (%): 2

Subregion (LRR): D

Lat: 40.19376

Long: -120.40185

Datum: NAD83

Soil Map Unit Name: (287) Mottsville loamy coarse sand, 2 to 9 percent slopes

NW1 classification: PSSC

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)Are Vegetation ☐ N, Soil ☐ N, or Hydrology ☐ N significantly disturbed? ☐ Are "Normal Circumstances" present? Yes ☒ No ☐Are Vegetation ☐ N, Soil ☐ N, or Hydrology ☐ N naturally problematic? ☐ (If needed, explain any answers in Remarks.)**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**Hydrophytic Vegetation Present? Yes ☒ No ☐Hydric Soil Present? Yes ☒ No ☐Wetland Hydrology Present? Yes ☒ No ☐Is the Sampled Area  
within a Wetland?Yes ☒ No ☐

**Remarks:** Strong groundwater presence at site. Wetland parameters present and indicated by dominance of hydrophytic vegetation, hydric soil indicator F6 (redox dark surface), and primary indicators of wetland hydrology. Unidentifiable species present in large quantity onsite and was conservatively considered FAC or wetter.

**VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER**

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: _____)				
1				
2				
3				
4				
		0	= Total Cover	

Sapling/Shrub Stratum (Plot size: _____)				
1				
2				
3				
4				
5				
		0	= Total Cover	

Herb Stratum	(Plot size: 5 foot radius )			
1 leplat	Lepidium latifolium	70	YES	FAC
2 Mimgut	Mimulus guttatus	10	NO	OBL
3 Polmon	Polypogon monspeliensis	5	NO	FACW
4				
5				
6				
7				
8				
9				
10				
11				
		85	= Total Cover	

Woody Vine Stratum	(Plot size: _____)	_____	_____	_____
1	_____	_____	_____	_____
2	_____	_____	_____	_____
		0	= Total Cover	

%Bare Ground in Herb

% Cover of Biotic

Stratum: 10

Crust: 8

**Dominance Test worksheet:**

Number of Dominant Species

That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant

Species Across All Strata: 1 (B)

Percent of Dominant Species

That Are OBL, FACW, or FAC: 100% (A/B)

**Prevalence Index worksheet:**

Total % Cover of: Multiply by:

OBL species 10 x 1 = 10

FACW species 5 x 2 = 10

FAC species 70 x 3 = 210

FACU species 0 x 4 = 0

UPL species 0 x 5 = 0

Column Totals: 85 (A) 230 (B)

Prevalence Index = B/A = 2.7059

**Hydrophytic Vegetation Indicators:**

1 - Rapid Test for Hydrophytic Vegetation

Yes 2 - Dominance Test is &gt;50%

Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)5 - Wetland Non-Vascular Plants<sup>1</sup>6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

**Hydrophytic  
Vegetation**

Present?

Yes ☒ No ☐

**Remarks:** Site is dominated by hydrophytic vegetation. Unknown species at large quantity (i.e. 70%) observed on site and conservatively considered as FAC or wetter.

SOIL		Sampling Point: SP 011-9							
Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)									
Depth (inches)	Matrix		Redox Features				Texture	Remarks	
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>			
0-16	10YR 3/2	70	5YR 4/4	10	C	M	Sandy Loam	Prominent redox concentrations	
0-16	10YR 4/4	15					Sand		
<sup>1</sup> Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup> Location: PL=Pore Lining, M=Matrix.

X Water Marks (B1) (Nonriverine)			Hydrogen Sulfide Odor (C1)			Dry-Season Water Table (C2)			
Sediment Deposits (B2) (Nonriverine)			Oxidized Rhizospheres along Living Roots (C3)			Crayfish Burrows (C8)			
Drift Deposits (B3) (Nonriverine)			Presence of Reduced Iron (C4)			Saturation Visible on Aerial Imagery (C9)			
Surface Soil Cracks (B6)			Recent Iron Reduction in Tilled Soils (C6)			Shallow Aquitard (D3)			
Inundation Visible on Aerial Imagery (B7)			Thin Muck Surface (C7)			* FAC-Neutral Test (D5)			
X Water-Stained Leaves (B9)			Other (Explain in Remarks)						
Field Observations:						Wetland Hydrology Present?			
Surface Water Present?		Yes	No	X	Depth (inches):	NA			
Water Table Present?		Yes	No	X	Depth (inches):	NA			
Saturation Present?		Yes	No	X	Depth (inches):	NA			
(includes capillary fringe)						Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>			
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:									
Remarks: Primary indicators (water marks and stained leaves) are present showing recent inundation. Secondary indicator of drainage pattern is also present. *It is likely that unidentifiable dominant species is wetter than FAC and would then satisfy secondary indicators.									

## WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Sampling Point: SP 012-9

Feature ID: U001-9

Project/Site: Zayo Fiberoptic Interconnect Project, Group #8

City/County: Lassen County

Sampling Date: 8/29/2019

Applicant/Owner: Zayo Group

State: California

Investigator(s): M. Williams, J. Ahn

Section, Township, Range: S16, T27N, R14E

Local relief (hillside, terrace, etc.): Hill slope

Local Relief (concave, convex, none): Convex

Slope (%): 3

Subregion (LRR): D Lat: 40.19369

Long: -120.40182

Datum: NAD83

Soil Map Unit Name: (287) Mottsville loamy coarse sand, 2 to 9 percent slopes

NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No significantly disturbed? ☐ Are "Normal Circumstances" present? Yes ☒ No ☐Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No naturally problematic? ☐ (If needed, explain any answers in Remarks.)**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**Hydrophytic Vegetation Present? Yes ☐ No ☒Hydric Soil Present? Yes ☐ No ☒Wetland Hydrology Present? Yes ☐ No ☒Is the Sampled Area  
within a Wetland?Yes ☐ No ☒**Remarks:** Sample confirmed as upland along slope where indicators of all three parameters are absent; upland pair point to W001-9.**VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER**

		Clay

Feature ID: D100-10

Cross section ID:

Date:

Time:

Cross section drawing:OHWM

GPS point: \_\_\_\_\_

**Indicators:**

Change in average sediment texture

Change in vegetation species

Change in vegetation cover

Break in bank slope

Other: \_\_\_\_\_

Other: \_\_\_\_\_

**Comments:**

Moderate break in bank slope, cobbles and boulders present below OHWM. *Salix exigua* is present below OHWM likely helps with bank stabilization. No wetland indicators present. Sampling point documents an intermittent stream.

Floodplain unit:

Low-Flow Channel

Active Floodplain

Low Terrace

GPS point: \_\_\_\_\_

**Characteristics of the floodplain unit:**Average sediment texture: Cobbles, boulders, sandTotal veg cover: 30 % Tree: 0 % Shrub: 30 % Herb: 0 %

Community successional stage:

NA

Early (herbaceous &amp; seedlings)

Mid (herbaceous, shrubs, saplings)

Late (herbaceous, shrubs, mature trees)

**Indicators:**

Mudcracks

Ripples

Drift and/or debris

Presence of bed and bank

Benches

Soil development

Surface relief

Other: \_\_\_\_\_

Other: \_\_\_\_\_

Other: \_\_\_\_\_

**Comments:**

Intermittent stream that is currently dry at time of survey. Has some sorting (cobbles and boulders) within low-flow channel. *Salix exigua* present in low-flow channel.

Feature ID:

Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?		<b>Location Details:</b> Adjacent to US 395. <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 40.01804, -120.10420			
<b>Potential anthropogenic influences on the channel system:</b> Drainage adjacent to HWY 395. Appears to be an ephemeral drainage that is dry at time of survey.					
<b>Brief site description:</b> Ephemeral drainage, manipulated for storm drainage. OHWM and TOB are the same.					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> ESRI GIS imagery  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies: </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b>  Period of record:  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site. 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units. 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units. <div style="margin-left: 20px;"> a) Record the floodplain unit and GPS position.  b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.  c) Identify any indicators present at the location. </div> 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section. 5. Identify the OHWM and record the indicators. Record the OHWM position via:					
<input type="checkbox"/> Mapping on aerial photograph <input type="checkbox"/> Digitized on computer		<input checked="" type="checkbox"/> GPS <input type="checkbox"/> Other:

## WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Sampling Point: SP 9-10

Feature ID: W05-10

Project/Site: Zayo Fiberoptic Interconnect Project, Group #10

City/County: Lassen County

Sampling Date: 9/3/2019

Applicant/Owner: Zayo Group

State: California

Investigator(s): S. Fritz, P. Ferral

Section, Township, Range: S25, T27N, R14E

Local relief (hillside, terrace, etc.): Depression

Local Relief (concave, convex, none): Concave

Slope (%): 2

Subregion (LRR): D

Lat: 40.16562

Long: -120.35041

Datum: NAD83

Soil Map Unit Name: (328) Plinco loam, 2 to 9 percent slopes

NW1 classification:

None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)Are Vegetation ☐ N, Soil ☐ N, or Hydrology ☐ N significantly disturbed?Are "Normal Circumstances" present? Yes ☒ No ☐Are Vegetation ☐ N, Soil ☐ N, or Hydrology ☐ N naturally problematic?

(If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present?

Yes ☒ No ☐

Hydric Soil Present?

Yes ☒ No ☐

Wetland Hydrology Present?

Yes ☒ No ☐Is the Sampled Area  
within a Wetland?Yes ☒ No ☐

**Remarks:** Relatively small wetland with one culvert associated (C10-10) evidenced by indicators of hydrophytic vegetation, and primary hydrology indicators (surface water, high water table and saturation). Hydrophytic vegetation and standing water is present; hydric soils are presumed.

**VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER**

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0 (A/B)

**Prevalence Index worksheet:**

Total % Cover of:	Multiply by:	
OBL species 0	x 1 =	0
FACW species 10	x 2 =	20
FAC species 0	x 3 =	0
FACU species 40	x 4 =	160
UPL species 95	x 5 =	475
Column Totals: 145 (A)		655 (B)
Prevalence Index = B/A =		4.5172

**Hydrophytic Vegetation Indicators:**

- 1 - Rapid Test for Hydrophytic Vegetation
- No 2 - Dominance Test is >50%
- No 3 - Prevalence Index is ≤3.0<sup>1</sup>
- 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)
- 5 - Wetland Non-Vascular Plants<sup>1</sup>
- 6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

**Hydrophytic Vegetation Present?**

Yes ☐ No ☒

Remarks: Sample point dominated by UPL vegetation.

[illegible]

## WETLAND DETERMINATION DATA FORM -Arid West Region

v.110918

Project/Site: Zayo Fiberoptic Interconnect Project, Group #10 City/County: Lassen County Sampling Date: 9/3/2019  
 Applicant/Owner: Zayo Group State: California Sampling Point: SP 108-10 Feature ID: W103-10  
 Investigator(s): M. Oats, K. Daniels Section, Township, Range: S2, T24N, R17E  
 Local relief (hillside, terrace, etc.): Depression Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRRN) D Lat: 39.95929 Long: -120.04021 Datum: NAD83  
 Soil Map Unit Name: (210) Fortsage silt loam, 0 to 2 percent slopes, hydric NWI classification: PEM1C

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)  
 Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐  
 Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present? Yes ☒ No ☐  
 Hydric Soil Present? Yes ☒ No ☐  
 Wetland Hydrology Present? Yes ☒ No ☐

Is the Sampled Area within a Wetland? Yes ☒ No ☐

**Evaluation of features designated "Other Waters"**

Characteristics: Type: \_\_\_\_\_ Width: \_\_\_\_\_ Substrate: \_\_\_\_\_  
 Indicators: Defined bed and bank: \_\_\_\_\_ Scour \_\_\_\_\_ OHWM Mapped \_\_\_\_\_  
 Feature Designation: Perennial \_\_\_\_\_ Intermittent \_\_\_\_\_ Ephemeral \_\_\_\_\_  
 Natural Drainage \_\_\_\_\_ Artificial Drainage \_\_\_\_\_ Navigable Water \_\_\_\_\_

**Remarks:** Wetland parameters are present as indicated by a dominance of hydrophytic vegetation, and a primary hydrology indicator, water stained leaves, indicating recent inundation. Soils meet criteria for problematic hydric soils as low chroma may obscure total quantity of redox concentrations in this seasonally inundated area.

**VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER**

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.110918

Project/Site: Zayo Fiberoptic Interconnect Project, Group #10 City/County: Lassen County Sampling Date: 9/4/2019  
 Applicant/Owner: Zayo Group State: California Sampling Point: SP 114-10 Feature ID: W106-10  
 Investigator(s): M. Oats, K. Daniels Section, Township, Range: S34, T25N, R17E  
 Local relief (hillside, terrace, etc.): Depression Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRRN) D Lat: 39.97846 Long: -120.06165 Datum: NAD83  
 Soil Map Unit Name: (342) Rose Creek loam, sodic, 0 to 2 percent slopes NWI classification: PEM1C

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)  
 Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐  
 Are Vegetation ☐ No, Soil ☐ No, or Hydrology ☐ No naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes ☒ No ☐  
 Hydric Soil Present? Yes ☒ No ☐  
 Wetland Hydrology Present? Yes ☒ No ☐  
 Is the Sampled Area within a Wetland? Yes ☒ No ☐

## Evaluation of features designated "Other Waters"

Characteristics: Type: \_\_\_\_\_ Width: \_\_\_\_\_ Substrate: \_\_\_\_\_  
 Indicators: Defined bed and bank: \_\_\_\_\_ Scour \_\_\_\_\_ OHWM Mapped \_\_\_\_\_  
 Feature Designation: Perennial \_\_\_\_\_ Intermittent \_\_\_\_\_ Ephemeral \_\_\_\_\_  
 Natural Drainage \_\_\_\_\_ Artificial Drainage \_\_\_\_\_ Navigable Water \_\_\_\_\_

Remarks: Wetland parameters are present as indicated by hydrology indicator water marks (nonriverine), hydric soils (depleted matrix), and a dominance of hydrophytic vegetation.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

OHWM

GPS point: \_\_\_\_\_

**Indicators:**

☒ Change in average sediment texture

☐ Change in vegetation species

☒ Change in vegetation cover

☒ Break in bank slope

☐ Other: \_\_\_\_\_

☐ Other: \_\_\_\_\_

**Comments:**

Moderate break in slope. Some sediment change and there's less percent cover of vegetation within OHWM.

Floodplain unit:

☒ Low-Flow Channel

☐ Active Floodplain

☐ Low Terrace

GPS point: \_\_\_\_\_

**Characteristics of the floodplain unit:**

Average sediment texture: Sandy loam

Total veg cover: 0 % Tree: 0 % Shrub: 0 % Herb: 5 %

Community successional stage:

☐ NA

☒ Early (herbaceous & seedlings)

☐ Mid (herbaceous, shrubs, saplings)

☐ Late (herbaceous, shrubs, mature trees)

**Indicators:**

☒ Mudcracks

☐ Ripples

☐ Drift and/or debris

☒ Presence of bed and bank

☐ Benches

☐ Soil development

☒ Surface relief

☒ Other: Surface soil cracks

☐ Other: \_\_\_\_\_

☐ Other: \_\_\_\_\_

**Comments:**

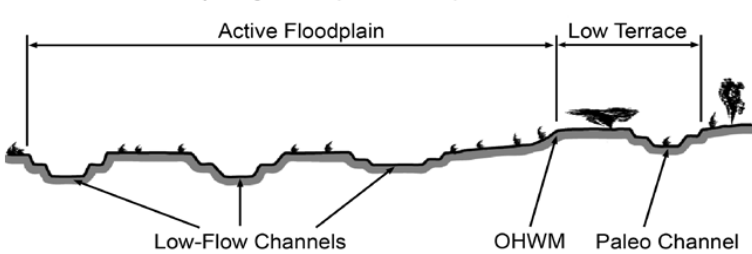

No water present in low-flow channel. Surface relief is present and the bed has surface soil cracks in the low-flow channel.

<b>Potential anthropogenic influences on the channel system:</b> Drainage crosses under HWY 395 through culvert. 20 foot section of drainage closest to road appears excavated. Appears to be an intermittent drainage that is dry at time of survey.					
<b>Brief site description:</b> Intermittent drainage runs under highway. Fence line present at ROW. Large amounts of erosion.					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> ESRI GIS imagery  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies:         </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b> _____  <b>Period of record:</b>  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event         </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b> 					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b> 1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site. 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units. 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units. a) Record the floodplain unit and GPS position. b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit. c) Identify any indicators present at the location. 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section. 5. Identify the OHWM and record the indicators. Record the OHWM position via:					
<input type="checkbox"/> Mapping on aerial photograph <input type="checkbox"/> Digitized on computer		<input checked="" type="checkbox"/> GPS <input type="checkbox"/> Other:

Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?			<b>Location Details:</b> Adjacent to US 395. <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 39.86090. -120.04043		
<b>Potential anthropogenic influences on the channel system:</b> Drainage crosses under HWY 395 through large culvert. Appears to be an intermittent drainage that is dry at time of survey.					
<b>Brief site description:</b> Intermittent drainage runs under highway. Fence line present before ROW.					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> ESRI GIS imagery  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies:         </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b> _____  <b>Period of record:</b>  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event         </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b> 					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b> 1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site. 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units. 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units. a) Record the floodplain unit and GPS position. b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit. c) Identify any indicators present at the location. 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section. 5. Identify the OHWM and record the indicators. Record the OHWM position via: <div style="display: flex; justify-content: space-between; margin-top: 10px;"> <div style="width: 45%;"> <input type="checkbox"/> Mapping on aerial photograph  <input type="checkbox"/> Digitized on computer         </div> <div style="width: 45%;"> <input checked="" type="checkbox"/> GPS  <input type="checkbox"/> Other:         </div> </div>

### Arid West Ephemeral and Intermittent Streams OHWM Datasheet

<b>Sampling Point:</b> SP 104-11		<b>Feature ID:</b> D104,105,106-11		<b>Date:</b> 9/6/2019	
<b>Project:</b> Zayo Fiberoptic Interconnect Project					
<b>Location:</b> Lassen County, CA			<b>Photo begin/end file#:</b> See Field Photos		
<b>Investigator(s):</b> SF/PF					
Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?			<b>Location Details:</b> Along Highway 395 <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 39.86898, -120.03564		
<b>Potential anthropogenic influences on the channel system:</b> Rangeland adjacent to Hwy. 395					
<b>Brief site description:</b> Small ephemeral channels running off hillside into D102-11, delineated to 10' fenceline, TOB same as OHWM, cross apply D104-11 with D105-11 and D106-11.					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> ESRI GIS imagery  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies:         </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b> _____  <b>Period of record:</b>  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event         </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHWM and record the indicators. Record the OHWM position via:					
<input type="checkbox"/> Mapping on aerial photograph			<input checked="" type="checkbox"/> GPS		
<input type="checkbox"/> Digitized on computer			<input type="checkbox"/> Other:		

### Wentworth Size Classes

Inches (in)	Millimeters (mm)	Wentworth size class
10.08	256	Boulder
2.56	64	Cobble

# **WETLAND DETERMINATION DATA FORM -Arid West Region**

v.110918

Project/Site: Zayo Fiberoptic Interconnect Project, Group #11 City/County: Lassen County Sampling Date: 9/4/2019

Applicant/Owner: Zayo Group State: California Sampling Point: SP 04-11 Feature ID: W01-11

Investigator(s): MO, KD Section, Township, Range: S20, T25N, R17E

Local relief (hillside, terrace, etc.): Depression Local Relief (concave, convex, none): Concave Slope (%): 1

Subregion (LRRN) D Lat: 39.92164 Long: -120.01854 Datum: NAD83

Soil Map Unit Name: (289) Mottsville gravelly loam, 2 to 9 percent slopes NWI classification: PEM1C

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)

Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No     

Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## **SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present? Yes x No     

Hydric Soil Present? Yes x No     

Wetland Hydrology Present? Yes x No     

Is the Sampled Area within a Wetland? Yes x No     

## **Evaluation of features designated "Other Waters"**

Characteristics: Type:      Width:      Substrate:     

Indicators: Defined bed and bank:      Scour      OHWM Mapped     

Feature Designation: Perennial      Intermittent      Ephemeral     

Natural Drainage      Artificial Drainage      Navigable Water     

**Remarks:** Wetland parameters are present as indicated by both primary and secondary hydrology indicators including saturation and a high water table, hydric soils (depleted matrix and the presence of hydrogen sulfide), and a dominance of hydrophytic vegetation.

## **VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECEENDING ORDER**

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.110918

Project/Site: Zayo Fiberoptic Interconnect Project City/County: Lassen County Sampling Date: 9/5/2019

Applicant/Owner: Zayo Group State: California Sampling Point: SP 08-11 Feature ID: W03-11

Investigator(s): MO/ KD Section, Township, Range: S34, T24, R18E

Local relief (hillside, terrace, etc.): Terrace Local Relief (concave, convex, none): Concave Slope (%): 4

Subregion (LRRN) D Lat: 39.90817 Long: -120.01221 Datum: NAD83

Soil Map Unit Name: 203 Fluvents-Riverwash complex, 0 to 1 percent slopes NWI classification: R3USC

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)

Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No     

Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No     

Hydric Soil Present? Yes x No     

Wetland Hydrology Present? Yes x No     

Is the Sampled Area within a Wetland? Yes x No     

## Evaluation of features designated "Other Waters"

Characteristics: Type:      Width:      Substrate:     

Indicators: Defined bed and bank:      Scour      OHWM Mapped     

Feature Designation: Perennial      Intermittent      Ephemeral     

Natural Drainage      Artificial Drainage      Navigable Water     

Remarks: Wetland parameters are present as indicated by hydrology indicator saturation, hydric soils (depleted matrix), and a dominance of hydrophytic vegetation.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECEENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: <u>    </u> )				
1 <u>    </u>	<u>    </u>	<u>    </u>	<u>    </u>	<u>    </u>
2 <u>    </u>	<u>    </u>	<u>    </u>	<u>    </u>	<u>    </u>

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.110918

Project/Site: Zayo Fiberoptic Interconnect Project, Group #11 City/County: Lassen County Sampling Date: 9/5/2019  
 Applicant/Owner: Zayo Group State: California Sampling Point: SP 07-11 Feature ID: NW01-11  
 Investigator(s): MO, KD Section, Township, Range: S13, T24N, R17E  
 Local relief (hillside, terrace, etc.): Depression Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 39.93826 Long: -120.02059 Datum: NAD83  
 Soil Map Unit Name: (363) Smocreek silty clay loam, 0 to 2 percent slopes NWI classification: PEM1C  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation YES, Soil YES, or Hydrology YES significantly disturbed?      Are "Normal Circumstances" present? Yes      No x  
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## **SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present?	Yes <u>x</u>	No <u>    </u>	Is the Sampled Area within a Wetland?	Yes	No	<u>x</u>
Hydric Soil Present?	Yes <u>    </u>	No <u>x</u>				
Wetland Hydrology Present?	Yes <u>    </u>	No <u>x</u>				

## **Evaluation of features designated "Other Waters"**

Characteristics: Type:      Width:      Substrate:       
 Indicators: Defined bed and bank:      Scour      OHWM Mapped       
 Feature Designation: Perennial      Intermittent      Ephemeral       
 Natural Drainage      Artificial Drainage      Navigable Water     

**Remarks:** The area was recently burned so vegetation is lacking and grasses are difficult to identify, however, the area still has a dominance of hydrophytic vegetation. The soils reveal homogeneous light brown soil with no redox features, and therefore there are no indicators of hydric soil. No hydrology indicators observed at time of survey. Therefore, this area lacks two of the three wetland

## **VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECEENDING ORDER**

### Arid West Ephemeral and Intermittent Streams OHWM Datasheet

<b>Sampling Point:</b> SP 01-12		<b>Feature ID:</b> D01-12		<b>Date:</b> 9/4/2019	
<b>Project:</b> Zayo Fiberoptic Interconnect Project					
<b>Location:</b> Lassen County			<b>Photo begin/end file#:</b> See Field Photos		
<b>Investigator(s):</b> SF PF					
Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?			<b>Location Details:</b> Lassen County <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 39.77617, 120.04173		
<b>Potential anthropogenic influences on the channel system:</b> Roadway, agriculture					
<b>Brief site description:</b> Ephemeral stream, top of bank and OHWM are the same, 2 associated culverts (C01-12- and C02-12). D02-12 is tributary to D01-12. D01-12 crosses County Road 70 via C01-12.					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> ESRI GIS Imagery  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies:         </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b> _____  <b>Period of record:</b>  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event         </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHWM and record the indicators. Record the OHWM position via:					
<input type="checkbox"/> Mapping on aerial photograph			<input checked="" type="checkbox"/> GPS		
<input type="checkbox"/> Digitized on computer			<input type="checkbox"/> Other:

<b>Project:</b> Zayo Fiberoptic Interconnect Project					
<b>Location:</b> Lassen County			<b>Photo begin/end file#:</b> See Field Photos		
<b>Investigator(s):</b> SF PF					
Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?			<b>Location Details:</b> Lassen County <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 39.76824, -120.03970		
<b>Potential anthropogenic influences on the channel system:</b> Roadway, agriculture					
<b>Brief site description:</b> Ephemeral stream. A&B top of bank and OHWM are the same, B is a tributary of A. C05-12 associated with B.					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> ESRI GIS Imagery  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies:         </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b> _____  <b>Period of record:</b>  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event         </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b> 					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b> 1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site. 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units. 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units. a) Record the floodplain unit and GPS position. b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit. c) Identify any indicators present at the location. 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section. 5. Identify the OHWM and record the indicators. Record the OHWM position via: <div style="display: flex; justify-content: space-between; margin-top: 10px;"> <div style="width: 45%;"> <input type="checkbox"/> Mapping on aerial photograph  <input type="checkbox"/> Digitized on computer         </div> <div style="width: 45%;"> <input checked="" type="checkbox"/> GPS  <input type="checkbox"/> Other: _____         </div> </div>					

### Wentworth Size Classes

Inches (in)	Millimeters (mm)	Wentworth size class
10.08	256	Boulder

# **Arid West Ephemeral and Intermittent Streams OHWM Datasheet**

<b>Sampling Point:</b> SP 08-12		<b>Feature ID:</b> D08-12		<b>Date:</b> 9/5/2019	
<b>Project:</b> Zayo Fiberoptic Interconnect Project					
<b>Location:</b> Lassen County			<b>Photo begin/end file#:</b> See Field Photos		
<b>Investigator(s):</b> SF PF					
Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?			<b>Location Details:</b> Lassen County <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 39.74153, -120.04033		
<b>Potential anthropogenic influences on the channel system:</b> Roadways (hwy 395 and frontage road)					
<b>Brief site description:</b> Deeply incised ephemeral stream between C11-12 and C12-12, heavily eroded around C12-12, TOB wider than OHWM (see below)					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> ESRI GIS Imagery  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies:         </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b> _____  <b>Period of record:</b>  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event         </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHWM and record the indicators. Record the OHWM position via:					
<input type="checkbox"/> Mapping on aerial photograph			<input checked="" type="checkbox"/> GPS		
<input type="checkbox"/> Digitized on computer			<input type="checkbox"/> Other:		

### Wentworth Size Classes

### Arid West Ephemeral and Intermittent Streams OHWM Datasheet

<b>Sampling Point:</b> SP 12-12		<b>Feature ID:</b> D12-12		<b>Date:</b> 9/5/2019	
<b>Project:</b> Zayo Fiberoptic Interconnect Project					
<b>Location:</b> Sierra County			<b>Photo begin/end file#:</b> See Field Photos		
<b>Investigator(s):</b> SF PF					
Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Is the site significantly disturbed?		<b>Location Details:</b> Sierra County <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 39.70612, -120.03473			
<b>Potential anthropogenic influences on the channel system:</b> Roadway (hwy 395)					
<b>Brief site description:</b> Small ephemeral stream flowing through C15-12, excavated/vegetation removed around C15-12 and banks (see photos), TOB same as OHWM					
<b>Checklist of resources (if available):</b>					
<input checked="" type="checkbox"/> Aerial photography <b>Dates:</b> ESRI GIS Imagery		<input type="checkbox"/> Stream gage data <b>Gage number:</b> _____			
<input checked="" type="checkbox"/> Topographic maps <input type="checkbox"/> Geologic maps <input type="checkbox"/> Vegetation maps <input checked="" type="checkbox"/> Soils maps <input type="checkbox"/> Rainfall/precipitation maps <input type="checkbox"/> Existing delineation(s) for site <input checked="" type="checkbox"/> Global positioning system (GPS) <input type="checkbox"/> Other studies:		Period of record: <input type="checkbox"/> History of recent effective discharges <input type="checkbox"/> Results of flood frequency analysis <input type="checkbox"/> Most recent shift-adjusted rating <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event			
<b>Hydrogeomorphic Floodplain Units</b>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHWM and record the indicators. Record the OHWM position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:

OHWM

GPS point: \_\_\_\_\_

Indicators:

☒ Change in average sediment texture

☐ Change in vegetation species

☒ Change in vegetation cover

☒ Break in bank slope

☐ Other: \_\_\_\_\_

☐ Other: \_\_\_\_\_

Comments:

Change in vegetation cover present at OHWM. Moderate break in slope present. Sediment change with boulders present in the bed of the channel.

Floodplain unit:

☒ Low-Flow Channel

☐ Active Floodplain

☐ Low Terrace

GPS point: \_\_\_\_\_

**Characteristics of the floodplain unit:**

Average sediment texture: Sandy loam

Total veg cover: 0 % Tree: 0 % Shrub: 0 % Herb: 0 %

Community successional stage:

☒ NA

☐ Early (herbaceous & seedlings)

☐ Mid (herbaceous, shrubs, saplings)

☐ Late (herbaceous, shrubs, mature trees)

Indicators:

☐ Mudcracks

☐ Ripples

☐ Drift and/or debris

☒ Presence of bed and bank

☐ Benches

☐ Soil development

☐ Surface relief

☐ Other: \_\_\_\_\_

☐ Other: \_\_\_\_\_

☐ Other: \_\_\_\_\_

Comments:

No water present in low-flow channel. Surface relief is present and the bed has boulders in the low-flow channel.

#### Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
  - a) Record the floodplain unit and GPS position.
  - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
  - c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHW M and record the indicators. Record the OHW M position via:

<input type="checkbox"/> Mapping on aerial photograph	<input checked="" type="checkbox"/> GPS
<input type="checkbox"/> Digitized on computer	<input type="checkbox"/> Other:

Hydrogeomorphic Floodplain Units

#### **Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:**

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
  - a) Record the floodplain unit and GPS position.
  - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
  - c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHW M and record the indicators. Record the OHW M position via:

<input type="checkbox"/> Mapping on aerial photograph	<input checked="" type="checkbox"/> GPS

## **Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:**

1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.
  - a) Record the floodplain unit and GPS position.
  - b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.
  - c) Identify any indicators present at the location.
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.
5. Identify the OHW M and record the indicators. Record the OHW M position via:

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 3-1x Feature ID: W01-1x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/9/2020  
 Investigator(s): B. Cohen, L. Morris, M. Oats, T. Kayatski Section, Township, Range: 25, 48N, 14E  
 Local relief (hillside, terrace, etc.): Depression Local Relief (concave, convex, none): Concave Slope (%): 0  
 Subregion (LRR): D Lat: 41.9725 Long: -120.3022 Datum: NAD 83  
 Soil Map Unit Name: Donica Gravelly Clay Loam, 2 to 9 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes x No     

Remarks: Hydric soils are problematic (see below), hydrology and hydrophytic vegetation present.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator
Tree Stratum	(Plot size: 30')	% Cover	Species?	Status
1 Alnvir	Alnus viridis	60	YES	FACW
2				
3				
4				
		60	= Total Cover	
Sapling/Shrub Stratum	(Plot size: 15')			
1 Roscal	Rosa californica	20	YES	FAC
2				
3				
4				
5				
		20	= Total Cover	
Herb Stratum	(Plot size: 5')			
1 Conmac	Conium maculatum	10	NO	FACW
2 Elytra	Elymus trachycaulus	65	YES	FACU
3				
4				
5				
6				
7				
8				
9				
10				
11				
		75	= Total Cover	
Woody Vine Stratum	(Plot size: )			
1				
2				
		0	= Total Cover	

%Bare Ground in Herb Stratum: 5 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)  
 Total Number of Dominant Species Across All Strata: 3 (B)  
 Percent of Dominant Species That Are OBL, FACW, or FAC: 67% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>70</u>	x 2 = <u>140</u>
FAC species <u>20</u>	x 3 = <u>60</u>
FACU species <u>65</u>	x 4 = <u>260</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>155</u> (A)	<u>460</u> (B)
Prevalence Index = B/A = <u>2.9677</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes X No     

Remarks: Hydrophytic vegetation indicators observed throughout the sample area. Sample area passes Dominance test and Prevalence index for hydrophytic vegetation.

SOIL							Sampling Point:	3-1x

<sup>3</sup> Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.								
<b>Restrictive Layer (if present):</b> Type: _____ None Depth (inches): _____ 16"						<b>Hydric Soil Present?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Soil is assumed hydric and therefore problematic. Soil has a dark matrix color and is adjacent to a highway with gravel fill. The area has active grazed ranch land and agriculture. These factors may affect the soils sufficiently to mask hydric soil. The depression landscape position with drainage patterns and drift deposits shows this location has Seasonally Pondered Soils (Char. 5 Problematic).

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 36-1 Feature ID: W3-1x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/12/2020  
 Investigator(s): L. Morris, T. Kayatski Section, Township, Range: 46N, 14E, 21  
 Local relief (hillside, terrace, etc.): Wetland swale Local Relief (concave, convex, none): Concave Slope (%): 3  
 Subregion (LRR): D Lat: 41.8134 Long: -120.3549 Datum: NAD 83  
 Soil Map Unit Name: Kinkel Loam, 2 to 15 percent slopes NWI classification: Riparian wetland/ FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes x No     

Remarks: Wetland swale sourced from culvert outfall conveying flows linearly east to southwest beyond property fence. Burn piles observed within survey area during March 2020 surveys suggesting significant recent disturbance. Under normal circumstances unburned area may have been a more robust shrub wetland.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

(includes capillary fringe)								
<b>Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:</b>								
<b>Remarks:</b> Primary hydrology observed through surface water and saturation and water table observed within 12 inches of the soil surface. Secondary indicators observed include FAC-neutral test and saturation visible on aerial imagery, meeting wetland hydrology.								

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 37-1x Feature ID: U3-1x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/12/2020  
 Investigator(s): L. Morris, T. Kayatski Section, Township, Range: 46N, 14E, 21  
 Local relief (hillside, terrace, etc.): Roadside Local Relief (concave, convex, none): Convex Slope (%): 3  
 Subregion (LRR): D Lat: 41.8134 Long: -120.3549 Datum: NAD 83  
 Soil Map Unit Name: Kinkel Loam, 2 to 15 percent slopes NWI classification: Riparian wetland/ FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes      No x  
 Wetland Hydrology Present? Yes      No x  
 Is the Sampled Area within a Wetland? Yes      No X

Remarks: Upland pair point to wetland swale. Area appears significantly disturbed due to burn piles. However hydrophytic vegetation still identifiable. Area confirmed as upland where both hydrology and soils did not meet wetland criteria.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 41-1x Feature ID: U5-1x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/12/2020  
 Investigator(s): L. Morris, T. Kayatski Section, Township, Range: 46N, 14E, 28  
 Local relief (hillside, terrace, etc.): Roadside Local Relief (concave, convex, none): Convex Slope (%): 6  
 Subregion (LRR): D Lat: 41.7948 Long: 120.3676 Datum: NAD 83  
 Soil Map Unit Name: Pit Silty Clay Loam, 0 to 2 percent slopes NWI classification: FEW/Seasonal Wetland  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>x</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>x</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>x</u>	

**Remarks:** Upland pair point to wetland swale along roadside slope where a dominance of hydrophytic vegetation, wetland hydrology, and hydric soils were not observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc county Feature ID: NW2-1x  
 Applicant/Owner: Zayo Group State: CA Sampling Date: 3/11/2020  
 Investigator(s): L. Morris, T. Kayatski Section, Township, Range: 47N, 14E, 34  
 Local relief (hillside, terrace, etc.): Depression Local Relief (concave, convex, none): Concave Slope (%): 1  
 Subregion (LRR): D Lat: 41.876 Long: -120.3458 Datum: NAD 83  
 Soil Map Unit Name: Sailsbury Gravelly Loam, 0 to 9 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes      No x  
 Hydric Soil Present? Yes      No x  
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes      No X

Remarks: NW2-1x was suspect area due to visible saturation on aerial imagery in shallow depression. Standing water present at time of survey. Area confirmed as upland, where dominance of hydrophytic vegetation and hydric soils are absent.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

 Local relief (hillside, terrace, etc.): Hillside Local Relief (concave, convex, none): Convex Slope (%): 15  
 Subregion (LRR): D Lat: 41.8236 Long: -120.3517 Datum: NAD 83  
 Soil Map Unit Name: Lorella Cobbly Clay Loam, 30 to 50 percent slopes NWI classification: PEM  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>X</u>
Hydric Soil Present?	Yes <u>    </u> No <u>x</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>x</u>	

**Remarks:** Suspect area with hydrophytic species along steep hillside west of highway. Area confirmed as upland as wetland hydrology and hydric soils were not observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

<p style="text-align: center;"><b>Hydrogeomorphic Floodplain Units</b></p>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHW M and record the indicators. Record the OHW M position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:

<p style="text-align: center;"><b>Hydrogeomorphic Floodplain Units</b></p>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHW M and record the indicators. Record the OHW M position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:			

### Wentworth Size Classes

Inches (in)	Millimeters (mm)	Wentworth size class	
10.08	256	Boulder	Gravel
2.56	64	Cobble	
0.157	4	Pebble	
0.079	2.00	Granule	
0.039	1.00	Very coarse sand	Sand
0.020	0.50	Coarse sand	
1/2 0.0098	0.25	Medium sand	
1/4 0.005	0.125	Fine sand	
1/8 0.0025	0.0625	Very fine sand	
1/16 0.0012	0.031	Coarse silt	Silt
1/32 0.00061	0.0156	Medium silt	
1/64 0.00031	0.0078	Fine silt	
1/128 0.00015	0.0039	Very fine silt	
		Clay	Mud

Feature ID: D15-2x

Cross section ID:

Date: 3/10/2020 Time:

**Cross section drawing:****OHW**

GPS point: \_\_\_\_\_

**Indicators:**

Change in average sediment texture

Break in bank slope

Change in vegetation species

Other: \_\_\_\_\_

Change in vegetation cover

Other: \_\_\_\_\_

**Comments:**

Intermittent stream; water present at time of survey. Water has low flow. Cobbles, gravel and pebble sized sediment in bed.

**Floodplain unit:**

Low-Flow Channel

Active Floodplain

Low Terrace

GPS point: \_\_\_\_\_

**Characteristics of the floodplain unit:**

Average sediment texture: Silty clay loam

Total veg cover: 90 % Tree: 0 % Shrub: 10 % Herb: 80 %

Community successional stage:

NA

Mid (herbaceous, shrubs, saplings)

Early (herbaceous &amp; seedlings)

Late (herbaceous, shrubs, mature trees)

**Indicators:**

Mudcracks

Soil development

Ripples

Surface relief

Drift and/or debris

Other: \_\_\_\_\_

Presence of bed and bank

Other: \_\_\_\_\_

Benches

Other: \_\_\_\_\_

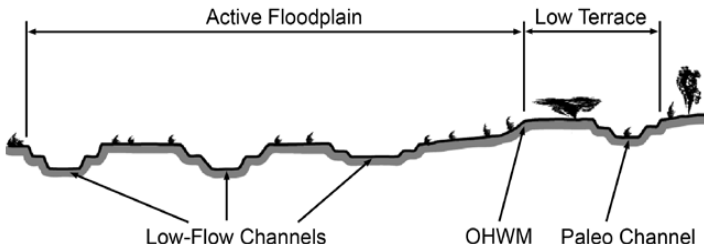

**Comments:**

Low floodplain above OHWM as indicated by noted indicators and some riparian vegetation.

# Arid West Ephemeral and Intermittent Streams OHW M Datasheet

<b>Sampling Point:</b> <u>123-2</u>		<b>Feature ID:</b> <u>D109-2bx</u>		<b>Date:</b> <u>3/10/2020</u>	
<b>Project:</b> <u>Zayo Fiberoptic</u>					
<b>Location:</b> <u>Modoc County</u>			<b>Photo begin/end file#:</b> <u>See Field Photos</u>		
<b>Investigator(s):</b> <u>M. Oats, B. Cohen</u>					
Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?		<b>Location Details:</b> <b>Projection:</b> <u>Lambert</u> <b>Datum:</b> <u>NAD83</u> <b>Coordinates:</b> <u>41.7407, -120.3760</u>			
<b>Potential anthropogenic influences on the channel system:</b> Potentially influenced by use of irrigation water.					
<b>Brief site description:</b> Appears to be an ephemeral stream; flows under Highway 395. Flows through metal culvert.					
<b>Checklist of resources (if available)</b>					
<input checked="" type="checkbox"/> Aerial photography <b>Dates:</b> _____		<input type="checkbox"/> Stream gage data <b>Gage number:</b> _____			
<input checked="" type="checkbox"/> Topographic maps <input type="checkbox"/> Geologic maps <input type="checkbox"/> Vegetation maps <input checked="" type="checkbox"/> Soils maps <input type="checkbox"/> Rainfall/precipitation maps <input type="checkbox"/> Existing delineation(s) for site <input checked="" type="checkbox"/> Global positioning system (GPS) <input type="checkbox"/> Other studies		Period of record: <input type="checkbox"/> History of recent effective discharges <input type="checkbox"/> Results of flood frequency analysis <input type="checkbox"/> Most recent shift-adjusted rating <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event			
<b>Hydrogeomorphic Floodplain Units</b>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHW M and record the indicators. Record the OHW M position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 3-2x Feature ID: W01-2x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/10/2020  
 Investigator(s): M. Oats, B. Cohen Section, Township, Range: 45N, 14E, 8  
 Local relief (hillside, terrace, etc.): flat meadow Local Relief (concave, convex, none): None Slope (%): 0  
 Subregion (LRR): D Lat: 41.7485 Long: -120.3757 Datum: NAD 83  
 Soil Map Unit Name: Drews Clay Loam, wet, 0 to 2 percent slopes NWI classification: Seasonal wetland/ FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed? No Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic? No (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Sample point satisfies all three wetland parameters.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator
Tree Stratum	(Plot size: <u>30' radius</u> )	% Cover	Species?	Status

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Feature ID: W4-2x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/10/2020  
 Investigator(s): M. Oats, B. Cohen Section, Township, Range: 45N, 14E, 17  
 Local relief (hillside, terrace, etc.): Roadside depression Local Relief (concave, convex, none): Concave Slope (%): 1  
 Subregion (LRR): D Lat: 41.7338 Long: -120.3754 Datum: NAD 83  
 Soil Map Unit Name: Salisbury Gravelly Loam, 0 to 9 percent slopes NWI classification: Seasonal wetland/FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: All three wetland indicators present. Positive Alpha Alpha Dipyrldyl test and hydrogen sulfide detected.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 26-2x Feature ID: W6-2x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/11/2020  
 Investigator(s): M. Oats, B. Cohen Section, Township, Range: 45N, 14E, 32  
 Local relief (hillside, terrace, etc.): Valley floor Local Relief (concave, convex, none): concave Slope (%): 0  
 Subregion (LRR): D Lat: 41.691 Long: -120.3755 Datum: NAD 83  
 Soil Map Unit Name: Pit Silty Clay Loam, 0 to 2 percent slopes NWI classification: Wetland swale/FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes x No     

Remarks: All three wetland indicators present. Soils are problematic and assumed hydric, see soil remarks. Sample location is the wetland boundary.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 29-2x Feature ID: W7-2x  
Applicant/Owner: Zayo Group State: California Sampling Date: 3/11/2020  
Investigator(s): M. Oats, B. Cohen Section, Township, Range: 44N, 14E, 5  
Local relief (hillside, terrace, etc.): Valley floor Local Relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR): D Lat: 41.6847 Long: -120.3777 Datum: NAD 83  
Soil Map Unit Name: Drews Clay Loam, 2 to 5 percent slopes NWI classification: Seasonal Wetland/FEW  
Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
Hydric Soil Present? Yes x No       
Wetland Hydrology Present? Yes x No       
Is the Sampled Area within a Wetland? Yes x No     

Remarks: All three wetland indicators present, sample area confirmed as wetland.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: 30' radius)				
1				
2				
3

2				
		0		= Total Cover

%Bare Ground in Herb Stratum: 0 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:	
OBL species	95	x 1 = 95
FACW species	0	x 2 = 0
FAC species	5	x 3 = 15
FACU species	0	x 4 = 0
UPL species	0	x 5 = 0
Column Totals:	100 (A)	110 (B)
Prevalence Index = B/A =		1.1

### Hydrophytic Vegetation Indicators:

1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
5 - Wetland Non-Vascular Plants<sup>1</sup>  
6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes X No     

Remarks: Presence of dominant OBL vegetation indicates hydrophytic vegetation dominance.

<b>Woody Vine Stratum</b> (Plot size: <u>30' radius</u> )				
1				
2				
		<u>0</u>		

%Bare Ground in Herb Stratum: 20 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:	
OBL species	<u>0</u> x 1 =	<u>0</u>
FACW species	<u>0</u> x 2 =	<u>0</u>
FAC species	<u>80</u> x 3 =	<u>240</u>
FACU species	<u>0</u> x 4 =	<u>0</u>
UPL species	<u>0</u> x 5 =	<u>0</u>
Column Totals:	<u>80</u> (A)	<u>240</u> (B)
Prevalence Index = B/A =		<u>3</u>

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

**Hydrophytic Vegetation Present?**

Yes X No     

**Remarks:** No grass heads to ID species, however it is an Elymus. Because species could not be discerned, we assume a FAC species. Therefore, there is a dominance of hydrophytic vegetation.

<input type="checkbox"/> Histosol (A1) <input type="checkbox"/> Histic Epipedon (A2) <input type="checkbox"/> Black Histic (A3) <input type="checkbox"/> Hydrogen Sulfide (A4) <input type="checkbox"/> Stratified Layers (A5) ( <b>LRR C</b> ) <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR D</b> ) <input type="checkbox"/> Depleted Below Dark Surface (A11) <input type="checkbox"/> Thick Dark Surface (A12) <input type="checkbox"/> Sandy Mucky Mineral (S1) <input type="checkbox"/> Sandy Gleyed Matrix (S4)	<input type="checkbox"/> Sandy Redox (S5) <input type="checkbox"/> Stripped Matrix (S6) <input type="checkbox"/> Loamy Mucky Mineral (F1) <input type="checkbox"/> Loamy Gleyed Matrix (F2) <input type="checkbox"/> Depleted Matrix (F3) <input type="checkbox"/> Redox Dark Surface (F6) <input type="checkbox"/> Depleted Dark Surface (F7) <input type="checkbox"/> Redox Depressions (F8) <input type="checkbox"/> Vernal Pools (F9)	<b>Indicators for Problematic Hydric Soils<sup>3</sup>:</b> <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR C</b> ) <input type="checkbox"/> 2 cm Muck (A10) ( <b>LRR B</b> ) <input type="checkbox"/> Reduced Vertic (F18) <input type="checkbox"/> Red Parent Material (TF2) <input checked="" type="checkbox"/> Other (Explain in Remarks)
--	---	---

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**  
 Type: \_\_\_\_\_ None  
 Depth (inches): \_\_\_\_\_ N/A

**Hydric Soil Present?**  
 Yes ☒ No ☐

**Remarks:** Dark soil matrix color may be obscuring redox features. The site is in a concave position and has a dominance of hydrophytic vegetation and has a primary and secondary indicator of hydrology therefore soils are assumed hydric. The site is assumed to have Seasonally Ponded Soils and the region lacks redox features in wetland areas.

**HYDROLOGY**

<b>Wetland Hydrology Indicators:</b>		<b>Secondary Indicators (2 or more required)</b>
<b>Primary Indicators (minimum of one required; check all that apply)</b> <input type="checkbox"/> Surface Water (A1) <input type="checkbox"/> High Water Table (A2) <input type="checkbox"/> Saturation (A3) <input type="checkbox"/> Water Marks (B1) ( <b>Nonriverine</b> ) <input type="checkbox"/> Sediment Deposits (B2) ( <b>Nonriverine</b> ) <input type="checkbox"/> Drift Deposits (B3) ( <b>Nonriverine</b> ) <input type="checkbox"/> Surface Soil Cracks (B6) <input type="checkbox"/> Inundation Visible on Aerial Imagery (B7) <input checked="" type="checkbox"/> Water-Stained Leaves (B9)		<input type="checkbox"/> Salt Crust (B11) <input type="checkbox"/> Biotic Crust (B12) <input type="checkbox"/> Aquatic Invertebrates (B13) <input type="checkbox"/> Hydrogen Sulfide Odor (C1) <input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3) <input type="checkbox"/> Presence of Reduced Iron (C4) <input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Other (Explain in Remarks)

**Field Observations:**  
 Surface Water Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_  
 Saturation Present? Yes ☐ No ☒ Depth (inches): \_\_\_\_\_  
 (includes capillary fringe)

**Wetland Hydrology Present?**  
 Yes ☒ No ☐

**Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:**

**Remarks:** Wetland hydrology indicators present as there is some water stained leaves and there is a secondary indicator of drainage patterns.

UPL species	20	x 5 = 100
Column Totals:	<u>80</u> (A)	<u>280</u> (B)
Prevalence Index = B/A =		<u>3.5</u>

### Hydrophytic Vegetation Indicators:

- 1 - Rapid Test for Hydrophytic Vegetation  
No 2 - Dominance Test is >50%  
No 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

**Hydrophytic Vegetation Present?**

Yes      No X

Remarks: No grass heads to ID species, however it is an Elymus. Because species could not be discerned, we assume a FAC species. However, due to the Elymus caput-medusae, there is not a dominance of hydrophytic vegetation.

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>60</u>	x 2 = <u>120</u>
FAC species <u>40</u>	x 3 = <u>120</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>100</u> (A)	<u>240</u> (B)
Prevalence Index = B/A = <u>2.4</u>	

### Hydrophytic Vegetation Indicators:

- 1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes X No     

Remarks: Presence of dominant FACW and FAC vegetation indicates hydrophytic vegetation dominance.

SOIL		Sampling Point: 44-2x				
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>						
Depth (inches)	Matrix		Redox Features		Texture	Remarks
	Color (moist)	%	Color (moist)	%		
0-16	10 YR 2/2	100			Clay loam	
<sup>1</sup> Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains.			<sup>4</sup> Location: PL=Pore Lining, M=Matrix.

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Feature ID: W12-2x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 3/13/2020  
 Investigator(s): M. Oats, B. Cohen Section, Township, Range: 43N, 13E, 01  
 Local relief (hillside, terrace, etc.): Terrace Local Relief (concave, convex, none): Concave Slope (%): 1  
 Subregion (LRR): D Lat: 41.6014 Long: -120.4231 Datum: NAD 83  
 Soil Map Unit Name: Lorella Loam, 30 to 50 percent slopes NWI classification: FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes x No     

Remarks: All three wetland indicators present. Soil is problematic and assumed hydric, see soil remarks. Adjacent to river system.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Feature ID: W05-3x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 3/31/2020  
 Investigator(s): B. Cohen, M. Gould Section, Township, Range: 43N, 13E, 33  
 Local relief (hillside, terrace, etc.): Floodplain Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 41.5226 Long: -120.4762 Datum: NAD 83  
 Soil Map Unit Name: Buntington Clay Loam, 0 to 2 percent slopes NWI classification: pond,FEW,riparian wet  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Fresh Emergent Wetland with all three indicators present.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status

%Bare Ground in Herb Stratum: 5 % Cover of Biotic Crust:           

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>40</u>	x 1 = <u>40</u>
FACW species <u>50</u>	x 2 = <u>100</u>
FAC species <u>0</u>	x 3 = <u>0</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>90</u> (A)	<u>140</u> (B)
Prevalence Index = B/A = <u>1.5556</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present?

Yes X No     

Remarks: Dominated by FACW and OBL veg, sample area has dominance of hydrophytic vegetation.

SOIL							Sampling Point: 26-3x

<b>Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:</b>								
<b>Remarks:</b> Only FAC-Neutral Test secondary indicator observed, does not meet criteria for wetland hydrology.								

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Sampling Point: 30-3x Feature ID: W06-3x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 3/31/2020  
 Investigator(s): B. Cohen, M. Gould Section, Township, Range: 43N, 13E, 33  
 Local relief (hillside, terrace, etc.): Floodplain Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 41.5188 Long: -120.4796 Datum: NAD 83  
 Soil Map Unit Name: Buntington Clay Loam, 0 to 2 percent slopes NWI classification: Riparian Wetland  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>X</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

**Remarks:** Riparian Wetland with all three indicators present, mapped via aerial imagery, data points obtained in field to verify boundaries via GPS. Soils are problematic and assumed hydric, see soil remarks.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECEENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator
Tree Stratum	(Plot size: _____)	% Cover	Species?	Status
1	_____	_____	_____	_____
2	_____	_____	_____	_____
3	_____	_____	_____	_____

2	_____	_____	_____	_____
		0	= Total Cover	

%Bare Ground in Herb Stratum:      % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)  
  
 Total Number of Dominant Species Across All Strata: 2 (B)  
  
 Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>120</u>	x 2 = <u>240</u>
FAC species <u>0</u>	x 3 = <u>0</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>120</u> (A)	<u>240</u> (B)
Prevalence Index = B/A = <u>2</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

**Hydrophytic Vegetation Present?**

Yes X No     

**Remarks:** Most willows appear dead with some new growth but lots of old dead larger individuals. Dominance of hydrophytic vegetation present.

<b>SOIL</b>		Sampling Point: 30-3x						
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>								
Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0-3	10 YR 2/2	100					Clay loam

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Feature ID: W12-3x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/1/2020  
 Investigator(s): B. Cohen, M. Gould Section, Township, Range: 42N, 12E, 13  
 Local relief (hillside, terrace, etc.): Pond bank Local Relief (concave, convex, none): Concave Slope (%): 3  
 Subregion (LRR): D Lat: 41.4765 Long: -120.5436 Datum: NAD83  
 Soil Map Unit Name: Pit Silty Clay Loam, 0 to 2 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes x No     

Remarks: All three wetland indicators observed, sample point has high surface water therefore soil pit not dug and point passes rapid test therefore soils are assumed hydric.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Modoc County Feature ID: W17-4x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/3/2020  
 Investigator(s): B. Cohen, M. Gould Section, Township, Range: 39N, 13E, 05  
 Local relief (hillside, terrace, etc.): Stream bank Local Relief (concave, convex, none): Concave Slope (%): 7  
 Subregion (LRR): D Lat: 41.2458 Long: -120.5046 Datum: NAD83  
 Soil Map Unit Name: Barnard Gravelly Loam, 0 to 9 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks:

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

%Bare Ground in Herb Stratum: 20 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>140</u>	x 2 = <u>280</u>
FAC species <u>0</u>	x 3 = <u>0</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>140</u> (A)	<u>280</u> (B)
Prevalence Index = B/A = <u>2</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present?

Yes X No     

Remarks: Sample area dominated by FACW vegetation, passes dominance test for hydrophytic vegetation.

SOIL							Sampling Point: 52-4x	
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>

<b>Restrictive Layer (if present):</b> Type: _____ Depth (inches): _____						<b>Hydric Soil Present?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Soil is depleted and shows depleted matrix indicators although the target layer starts 11 inches from the mineral soil surface the layer above the target has a matrix value of 4 or more and a chroma of 2 or less. The target layer has a matrix value of 4 and a chroma of 1 and has a high percentage of prominent redox concentrations and thus the target layer plus the depleted layer above can qualify for indicator F3 depleted matrix and soil is considered hydric.

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Likey, Modoc County Sampling Point: 56-4x Feature ID: W20-4x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/3/2020

Investigator(s): B. Cohen, M. Gould Section, Township, Range: 39N, 13E, 05  
 Local relief (hillside, terrace, etc.): Linear depression Local Relief (concave, convex, none): Concave Slope (%): 1

Subregion (LRR): D Lat: 41.2421 Long: -120.5045 Datum: NAD83  
 Soil Map Unit Name: Buntingville Clay Loam, 0 to 2 percent slopes NWI classification: FEW

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No     

Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Fresh Emergent Wetland, all three wetland parameters observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Likely, Modoc County Sampling Point: 59-4x Feature ID: U23-4x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/3/2020  
 Investigator(s): B. Cohen, M. Gould Section, Township, Range: 39N, 13E, 05  
 Local relief (hillside, terrace, etc.): Road slope Local Relief (concave, convex, none): Concave Slope (%): 5  
 Subregion (LRR): D Lat: 41.2383 Long: -120.5042 Datum: NAD83  
 Soil Map Unit Name: Modoc Sandy Loam, 0 to 9 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>x</u>
Hydric Soil Present?	Yes <u>    </u> No <u>x</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>x</u>	

**Remarks:** Upland pair point to W23-4x. Sample area has a dominance of hydrophytic vegetation but no hydrology or hydric soil indicators were observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Likely, Modoc County Sampling Point: 62-4x Feature ID: W29-4x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/7/2020  
 Investigator(s): B. Cohen, M. Gould Section, Township, Range: 39N, 13E, 05  
 Local relief (hillside, terrace, etc.): Roadside ditch Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 41.2346 Long: -120.5041 Datum: NAD83  
 Soil Map Unit Name: Lakeview Loam, 0 to 2 percent slopes, pit river area, mrla 21 NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: All three wetland parameters observed, soils are problematic and assumed hydric - see soil remarks.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator
Tree Stratum	(Plot size: 30 ft )	% Cover	Species?	Status

<b>Restrictive Layer (if present):</b> Type: _____ Depth (inches): _____						<b>Hydric Soil Present?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Redox is deeper than needed for standard F6 indicator but due to wet conditions and dark soil color redox above may be obscured and proximity to stream may influence upper layer redox presence. Sample area is dominated by hydrophytic vegetation and has a high water table in a concave surface, therefore soil is assumed hydric.								
<b>HYDROLOGY</b>								
<b>Wetland Hydrology Indicators:</b> Primary Indicators (minimum of one required; check all that apply)						Secondary Indicators (2 or more required)		
<input type="checkbox"/> Surface Water (A1)			<input type="checkbox"/> Salt Crust (B11)			<input type="checkbox"/> Water Marks (B1) ( <b>Riverine</b> )

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Feature ID: W38-4x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/8/2020  
 Investigator(s): B. Cohen, M. Gould Section, Township, Range: 38N, 13E, 17  
 Local relief (hillside, terrace, etc.): Swale Local Relief (concave, convex, none): Concave Slope (%): 1  
 Subregion (LRR): D Lat: 41.1308 Long: -120.5023 Datum: NAD83  
 Soil Map Unit Name: Searles-Orhood-Devada Association, 5 to 30 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes x No     

Remarks: All three wetland parameters observed. Soil is problematic and assumed hydric - see soil remarks.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

FAC species <u>100</u>	x 3 =	<u>300</u>
FACU species <u>0</u>	x 4 =	<u>0</u>
UPL species <u>0</u>	x 5 =	<u>0</u>
Column Totals: <u>115</u> (A)		<u>330</u> (B)
Prevalence Index = B/A = <u>2.8696</u>		

## Hydrophytic Vegetation Indicators:

1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes X No     

Remarks: Unknown carex dominant, likely FACW or greater but labelled FAC. Passes dominance test for hydrophytic vegetation.

SOIL							Sampling Point: 75-4x	
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>								
Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0-16	10 YR 2/2	100					Clay loam	Roots throughout
<sup>1</sup> Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains.						<sup>2</sup> Location: PL=Pore Lining, M=Matrix.		
<b>Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)</b>								
<input type="checkbox"/> Histosol (A1) <input type="checkbox"/> Histic Epipedon (A2) <input type="checkbox"/> Black Histic (A3) <input type="checkbox"/> Hydrogen Sulfide (A4) <input type="checkbox"/> Stratified Layers (A5) ( <b>LRR C</b> ) <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR D</b> ) <input type="checkbox"/> Depleted Below Dark Surface (A11) <input type="checkbox"/> Thick Dark Surface (A12) <input type="checkbox"/> Sandy Mucky Mineral (S1) <input type="checkbox"/> Sandy Gleyed Matrix (S4)			<input type="checkbox"/> Sandy Redox (S5) <input type="checkbox"/> Stripped Matrix (S6) <input type="checkbox"/> Loamy Mucky Mineral (F1) <input type="checkbox"/> Loamy Gleyed Matrix (F2) <input type="checkbox"/> Depleted Matrix (F3) <input type="checkbox"/> Redox Dark Surface (F6) <input type="checkbox"/> Depleted Dark Surface (F7) <input type="checkbox"/> Redox Depressions (F8) <input type="checkbox"/> Vernal Pools (F9)			<b>Indicators for Problematic Hydric Soils<sup>3</sup>:</b> <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR C</b> ) <input type="checkbox"/> 2 cm Muck (A10) ( <b>LRR B</b> ) <input type="checkbox"/> Reduced Vertic (F18) <input type="checkbox"/> Red Parent Material (TF2) <input checked="" type="checkbox"/> Other (Explain in Remarks)		
<sup>3</sup> Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.								
<b>Restrictive Layer (if present):</b>						<b>Hydric Soil Present?</b>		
Type: _____ Depth (inches): _____						Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Soil is problematic and is totally inundated and dark which could obscure redox features. Soil is assumed hydric due to high water table (ponding/flooding; Chapter 5 soils) and dominance of hydrophytic vegetation in a concave position.

<p style="text-align: center;"><b>Hydrogeomorphic Floodplain Units</b></p>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHW M and record the indicators. Record the OHW M position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:

<b>Restrictive Layer (if present):</b> Type: _____ Depth (inches): _____						<b>Hydric Soil Present?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Soil is problematic. Although redox not seen in target depleted layer soil is still believed to be hydric with a matrix value of 4 or more and a chroma of 1 or less. Layer above depleted layer is dark in color and may have redox features within it that may be obscured by dark color. Feature is in a concave position with dominant hydrophytic vegetation and primary hydrology, therefore soil likely ponds and is assumed to be hydric.

 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes      No x  
 Hydric Soil Present? Yes      No x  
 Wetland Hydrology Present? Yes      No x  
 Is the Sampled Area within a Wetland? Yes      No x

Remarks: Upland pair point to W4-5x, no wetland indicators observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

### Dominance Test worksheet:

Number of Dominant Species  
 That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant  
 Species Across All Strata: 3 (B)

Percent of Dominant Species  
 That Are OBL, FACW, or FAC: 0% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species 0	x 1 = 0
FACW species 0	x 2 = 0
FAC species 0	x 3 = 0
FACU species 15	x 4 = 60
UPL species 35	x 5 = 175
Column Totals: 50 (A)	235 (B)
Prevalence Index = B/A = 4.7	

### Hydrophytic Vegetation Indicators:

1 - Rapid Test for Hydrophytic Vegetation  
 No 2 - Dominance Test is >50%  
 No 3 - Prevalence Index is ≤3.0<sup>1</sup>  
 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
 5 - Wetland Non-Vascular Plants<sup>1</sup>  
 6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic  
 Vegetation  
 Present?

Yes ☐ No ☒

Remarks: No hydrophytic vegetation present

SOIL							Sampling Point: 6-5x	
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>								
Depth (inches)	Matrix		Redox Features				Texture	Remarks

<p style="text-align: center;"><b>Hydrogeomorphic Floodplain Units</b></p>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHW M and record the indicators. Record the OHW M position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Feature ID: W01-6x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/7/2020  
 Investigator(s): M. Oats, B. Cohen Section, Township, Range: 33N, 15E, 06  
 Local relief (hillside, terrace, etc.): valley floor Local Relief (concave, convex, none): concave Slope (%): 1  
 Subregion (LRR): D Lat: 40.7533 Long: -120.3295 Datum: NAD83  
 Soil Map Unit Name: Ravendale Silty Clay, 0 to 2 percent slopes NWI classification: FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Hydrophytic vegetation and hydrology are present. Soil is problematic and assumed hydric - see soil remarks.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator
Tree Stratum	(Plot size: _____)	% Cover	Species?	Status

		0	= Total Cover	

%Bare Ground in Herb Stratum: 0 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>100</u>	x 2 = <u>200</u>
FAC species <u>0</u>	x 3 = <u>0</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>100</u> (A)	<u>200</u> (B)
Prevalence Index = B/A = <u>2</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present?

Yes X No     

Remarks: Sample area dominated by FACW vegetation.

SOIL							Sampling Point: 01-6x	
Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)								
Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0-3	10YR-2/2	100					Loam	Organic matter present
3-16	10YR-3/3	100					Clay loam	

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains.      <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

<input type="checkbox"/> Histosol (A1) <input type="checkbox"/> Histic Epipedon (A2) <input type="checkbox"/> Black Histic (A3) <input type="checkbox"/> Hydrogen Sulfide (A4) <input type="checkbox"/> Stratified Layers (A5) ( <b>LRR C</b> ) <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR D</b> ) <input type="checkbox"/> Depleted Below Dark Surface (A11) <input type="checkbox"/> Thick Dark Surface (A12) <input type="checkbox"/> Sandy Mucky Mineral (S1) <input type="checkbox"/> Sandy Gleyed Matrix (S4)	<input type="checkbox"/> Sandy Redox (S5) <input type="checkbox"/> Stripped Matrix (S6) <input type="checkbox"/> Loamy Mucky Mineral (F1) <input type="checkbox"/> Loamy Gleyed Matrix (F2) <input type="checkbox"/> Depleted Matrix (F3) <input type="checkbox"/> Redox Dark Surface (F6) <input type="checkbox"/> Depleted Dark Surface (F7) <input type="checkbox"/> Redox Depressions (F8) <input type="checkbox"/> Vernal Pools (F9)	<b>Indicators for Problematic Hydric Soils<sup>3</sup>:</b> <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR C</b> ) <input type="checkbox"/> 2 cm Muck (A10) ( <b>LRR B</b> ) <input type="checkbox"/> Reduced Vertic (F18) <input type="checkbox"/> Red Parent Material (TF2) <input checked="" type="checkbox"/> Other (Explain in Remarks)
--	---	---

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

<b>Restrictive Layer (if present):</b> Type: _____ Depth (inches): _____	<b>Hydric Soil Present?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
--	--

**Remarks:** Soils are problematic. Upper layer has a dark matrix color. Sample area is in a concave position with dominant wetland vegetation and primary hydrology, soils are likely seasonally ponded; therefore soils are assumed hydric. In addition region lacks redox features in wetland areas.

**HYDROLOGY**

<b>Wetland Hydrology Indicators:</b> Primary Indicators (minimum of one required; check all that apply) <input type="checkbox"/> Surface Water (A1) <input type="checkbox"/> Salt Crust (B11) <input type="checkbox"/> High Water Table (A2) <input type="checkbox"/> Biotic Crust (B12) <input checked="" type="checkbox"/> Saturation (A3) <input type="checkbox"/> Aquatic Invertebrates (B13) <input type="checkbox"/> Water Marks (B1) ( <b>Nonriverine</b> ) <input type="checkbox"/> Hydrogen Sulfide Odor (C1) <input type="checkbox"/> Sediment Deposits (B2) ( <b>Nonriverine</b> ) <input type="checkbox"/> Oxidized Rhizospheres along Living Roots (C3) <input type="checkbox"/> Drift Deposits (B3) ( <b>Nonriverine</b> ) <input type="checkbox"/> Presence of Reduced Iron (C4) <input type="checkbox"/> Surface Soil Cracks (B6) <input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6) <input type="checkbox"/> Inundation Visible on Aerial Imagery (B7) <input type="checkbox"/> Thin Muck Surface (C7) <input checked="" type="checkbox"/> Water-Stained Leaves (B9) <input type="checkbox"/> Other (Explain in Remarks)	Secondary Indicators (2 or more required) <input type="checkbox"/> Water Marks (B1) ( <b>Riverine</b> ) <input type="checkbox"/> Sediment Deposits (B2) ( <b>Riverine</b> ) <input type="checkbox"/> Drift Deposits (B3) ( <b>Riverine</b> ) <input type="checkbox"/> Drainage Patterns (B10) <input type="checkbox"/> Dry-Season Water Table (C2) <input type="checkbox"/> Crayfish Burrows (C8) <input type="checkbox"/> Saturation Visible on Aerial Imagery (C9) <input type="checkbox"/> Shallow Aquitard (D3) <input checked="" type="checkbox"/> FAC-Neutral Test (D5)

<b>Restrictive Layer (if present):</b>						<b>Hydric Soil Present?</b>		
Type: <u>Shovel refusal</u>								
Depth (inches): <u>12</u>						Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Soil is problematic. Soil shows depleted matrix colors with values 4 or more and chroma of 1 or less but is not 60 percent dominant in the target layer. The target layer shows faint redox concentrations. These elements do not strictly meet the criteria for indicators F3 or F6 but show nearly all requirements. Since the sample area is in a concave position, seasonally flooded, and on the edge of the wetland, soil is assumed hydric. In addition many wetlands in region lack redox features.

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 09-6x Feature ID: W03-6x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/8/2020  
 Investigator(s): M. Oats, R. Stoddard Section, Township, Range: 33N, 15E, 17  
 Local relief (hillside, terrace, etc.): Valley floor Local Relief (concave, convex, none): Concave Slope (%): 0  
 Subregion (LRR): D Lat: 40.7193 Long: -120.3061 Datum: NAD83  
 Soil Map Unit Name: Indiano-Searles Association, 5 to 30 percent slopes NWI classification: FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation Yes, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes      No x  
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes      No x

**Remarks:** Area dominated by FACU species however, sample point contains hydric soil indicator F6 and has indicators of hydrology, therefore vegetation is problematic and area is considered wetland.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: <u>    </u> )

Woody Vine Stratum (Plot size: <u>    </u> )				
1				
2				
		<u>0</u>		= Total Cover

%Bare Ground in Herb Stratum: 0 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:	
OBL species <u>0</u>	x 1 =	<u>0</u>
FACW species <u>0</u>	x 2 =	<u>0</u>
FAC species <u>30</u>	x 3 =	<u>90</u>
FACU species <u>70</u>	x 4 =	<u>280</u>
UPL species <u>0</u>	x 5 =	<u>0</u>
Column Totals: <u>100</u> (A)		<u>370</u> (B)
Prevalence Index = B/A =		<u>3.7</u>

### Hydrophytic Vegetation Indicators:

1 - Rapid Test for Hydrophytic Vegetation  
No 2 - Dominance Test is >50%  
No 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes      No X

**Remarks:** Area dominated by FACU species but feature is in a concave position with hydric soil indicators and hydrology which likely indicate vegetation has not changed in recent wetland development or hydrology has changed and area is likely wetland with problematic vegetation. FACU species may occur in wet areas and the presence of two other species that are both FAC supports this assertion that the wet area has problematic vegetation and is wetland.

<b>Remarks:</b> Area ponded with 6 inches of stranding water. Potential seep. Many primary and secondary hydrology indicators present.						

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Feature ID: U05-6x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/8/2020  
 Investigator(s): M. Oats, R. Stoddard Section, Township, Range: 33N, 15E, 33  
 Local relief (hillside, terrace, etc.): slope Local Relief (concave, convex, none): Convex Slope (%): 4  
 Subregion (LRR): D Lat: 40.6819 Long: -120.2894 Datum: NAD83  
 Soil Map Unit Name: Tunnison Very Cobbly Clay, 2 to 9 percent slopes NWI classification: None  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>x</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>x</u>
Hydric Soil Present?	Yes <u>    </u> No <u>x</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>x</u>	

Remarks: Upland pair point to W05-6x. No wetland parameters observed. Upland area has large rocks (small boulders), along with cobble rocks throughout soil. Upland plant community exists in the upland area amongst the rocks and no hydrology indicators observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 50-6x Feature ID: W50-6x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/28/2020

Investigator(s): M. Oats, R. Stoddard Section, Township, Range: 32N, 15E, 14  
 Local relief (hillside, terrace, etc.): Slight depression Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 40.6325 Long: -120.2515 Datum: NAD83  
 Soil Map Unit Name: Shinnpeak Very Cobbly Loam, 2 to 15 percent slopes NWI classification: FEW

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: All three wetland indicators observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

### Dominance Test worksheet:

Number of Dominant Species  
That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant  
Species Across All Strata: 2 (B)

Percent of Dominant Species  
That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species	<u>0</u> x 1 = <u>0</u>
FACW species	<u>90</u> x 2 = <u>180</u>
FAC species	<u>10</u> x 3 = <u>30</u>
FACU species	<u>0</u> x 4 = <u>0</u>
UPL species	<u>0</u> x 5 = <u>0</u>
Column Totals:	<u>100</u> (A) <u>210</u> (B)
Prevalence Index = B/A = <u>2.1</u>	

### Hydrophytic Vegetation Indicators:

- 1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic  
Vegetation  
Present?

Yes X No     

Remarks: Area dominated by FACW vegetation.

 Subregion (LRR): D Lat: 40.2877 Long: -120.4806 Datum: NAD83  
 Soil Map Unit Name: Truckee Loam, 0 to 2 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes x No       
 Wetland Hydrology Present? Yes x No       
 Is the Sampled Area within a Wetland? Yes x No     

Remarks: Adjacent to irrigated pasture/wetland outside ROW. All three wetland indicators present. Soils are problematic and assumed hydric - see soil remarks.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator

<b>Restrictive Layer (if present):</b>						<b>Hydric Soil Present?</b>			
Type: _____						Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>			
Depth (inches): _____									
<b>Remarks:</b> Soil is problematic. Very small gravel or sandy material present. Soil matrix is a dark color and may obscure redox features. Feature is in a concave position with a dominance of hydrophytic vegetation and hydrology and therefore soil is assumed hydric. In addition, many wetlands in region lack hydric soil indicators and soil hydrology is seasonal and influenced by agriculture.

<b>Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:</b>								
<b>Remarks:</b> Hydrology is problematic. Dominance of hydrophytic vegetation and hydric soils in concave area present. Hydrology has likely been manipulated or cutoff. Evidence of past stream likely due to culvert, landform through agricultural features, and hydrology on other side of road. Current hydrology may be seasonal and potential human influenced through agricultural releases.

Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>x</u>	

Remarks: Relic hydric soil may be present,. Area is dominated by hydrophytic vegetation but does not show hydrology.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator
Tree Stratum	(Plot size: _____)	% Cover	Species?	Status
1	_____	_____	_____	_____
2	_____	_____	_____	_____
3	_____	_____	_____	_____
4	_____	_____	_____	_____
		0	= Total Cover	
Sapling/Shrub Stratum	(Plot size: _____)			
1	_____	75	_____	_____
2	_____	20	_____	_____
3	_____	_____	_____	_____
4	_____	_____	_____	_____
5	_____	_____	_____	_____
		95	= Total Cover	
Herb Stratum	(Plot size: 6 ft _____)			
1	Leplat <i>Lepidium latifolium</i>	80	YES	FAC
2	Conmac <i>Conium maculatum</i>	10	NO	FACW
3	_____	_____	_____	_____
4	_____	_____	_____	_____
5	_____	_____	_____	_____
6	_____	_____	_____	_____
7	_____	_____	_____	_____
8	_____	_____	_____	_____
9	_____	_____	_____	_____
10	_____	_____	_____	_____
11	_____	_____	_____	_____
		90	= Total Cover	
Woody Vine Stratum	(Plot size: _____)			
1	_____	_____	_____	_____
2	_____	_____	_____	_____
		0	= Total Cover	

%Bare Ground in Herb Stratum: 10 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species  
That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species  
That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>10</u>	x 2 = <u>20</u>
FAC species <u>80</u>	x 3 = <u>240</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>90</u> (A)	<u>260</u> (B)
Prevalence Index = B/A = <u>2.8889</u>	

### Hydrophytic Vegetation Indicators:

1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

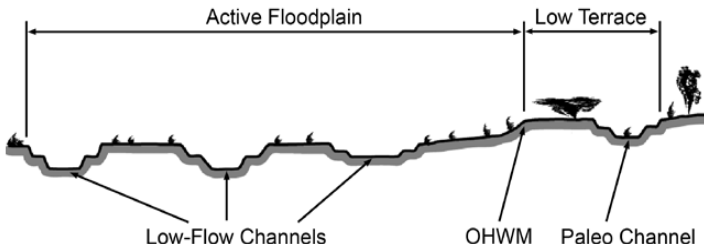

Hydrophytic  
Vegetation  
Present?

Yes X No     

Remarks: Hydrophytic vegetation is dominant in sample point.

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 100-9x Feature ID: W100-9x  
 Applicant/Owner: Zayo Group State: California Sampling Date: 4/29/2020  
 Investigator(s): M. Oats, B. Cohen Section, Township, Range: 27N, 14E, 08  
 Local relief (hillside, terrace, etc.): Roadside depression Local Relief (concave, convex, none): Concave Slope (%): 1  
 Subregion (LRR): D Lat: 40.2074 Long: -120.4174 Datum: NAD 83  
 Soil Map Unit Name: Bonta Coarse Sandy Loam, 9 to 15 percent slopes NWI classification: None  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Seasonal wetland with all three wetland parameters met.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: <u>    </u> )

%Bare Ground in Herb Stratum: 30 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>30</u>	x 1 = <u>30</u>
FACW species <u>80</u>	x 2 = <u>160</u>
FAC species <u>0</u>	x 3 = <u>0</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>110</u> (A)	<u>190</u> (B)
Prevalence Index = B/A = <u>1.7273</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present?

Yes X No     

Remarks: Hydrophytic vegetation observed as indicated by a dominance of OBL and FACW vegetation.

SOIL		Sampling Point: 100-9x

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 2-9x Feature ID: NW2-9x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/16/2020

Investigator(s): B. Cohen, M. Gould Section, Township, Range: 27N, 14E, 06  
 Local relief (hillside, terrace, etc.): Roadside depression Local Relief (concave, convex, none): Concave Slope (%): 2

Subregion (LRR): D Lat: 40.2338 Long: -120.4459 Datum: NAD83  
 Soil Map Unit Name: Mottsville Loamy Coarse Sand, 2 to 9 percent slopes NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)

Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No     

Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes x No       
 Hydric Soil Present? Yes      No x  
 Wetland Hydrology Present? Yes      No x

Is the Sampled Area within a Wetland? Yes      No x

Remarks: Suspect depression on roadside, dominant hydrophytic vegetation but lacks two secondary hydrology indicators and hydric soil indicators.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: <u>    </u> )				
1				
2				
3				
4				
		<u>0</u>		= Total Cover

Sapling/Shrub Stratum (Plot size: <u>15 ft</u> )				
1 Roscal	Rosa californica	35	YES	FAC
2 Salexi	Salix exigua	85	YES	FACW
3				
4				
5				
		<u>120</u>		= Total Cover

Herb Stratum (Plot size: <u>    </u> )				
1				
2				
3				
4				
5				
6				
7				
8				
9				
10				
11				
		<u>0</u>		= Total Cover

Woody Vine Stratum (Plot size: <u>    </u> )				
1				
2				
		<u>0</u>		= Total Cover

%Bare Ground in Herb Stratum: 100 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>85</u>	x 2 = <u>170</u>
FAC species <u>35</u>	x 3 = <u>105</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>120</u> (A)	<u>275</u> (B)
Prevalence Index = B/A = <u>2.2917</u>	

### Hydrophytic Vegetation Indicators:

- 1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

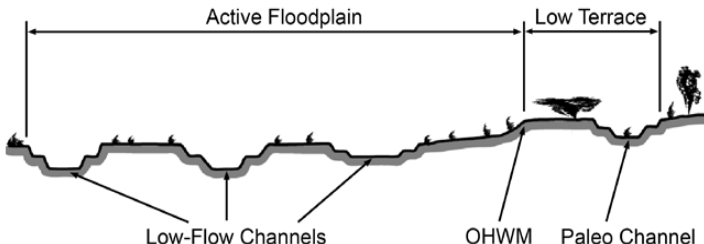

Hydrophytic Vegetation Present?

Yes X No     

Remarks: Area dominated by hydrophytic vegetation.

SOIL							Sampling Point:	2-9x
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>								
Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 01-10x Feature ID: W01-10x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/17/2020

Investigator(s): B. Cohen, M. Gould Section, Township, Range: 27N, 14E, 26  
 Local relief (hillside, terrace, etc.): Valley floor Local Relief (concave, convex, none): Concave Slope (%): 1  
 Subregion (LRR): D Lat: 40.1686 Long: -120.3645 Datum: NAD83  
 Soil Map Unit Name: Mottsville Loamy Coarse Sand, 2 to 9 percent slopes NWI classification: FEW

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Riparian/Fresh Emergent Wetland with all three wetland parameters met. Stream feature across highway connected through culverts however on this side of highway there may be a relict channel or hydrological connection through culverts.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: <u>    </u> )				
1 <u>    </u>	<u>    </u>	<u>    </u>	<u>    </u>	<u>    </u>

%Bare Ground in Herb Stratum: 0 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species  
That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species  
That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>100</u>	x 2 = <u>200</u>
FAC species <u>130</u>	x 3 = <u>390</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>230</u> (A)	<u>590</u> (B)
Prevalence Index = B/A = <u>2.5652</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic  
Vegetation  
Present?

Yes X No     

Remarks: Area dominated by hydrophytic vegetation.

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 10-10x Feature ID: W4-10x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/20/2020  
 Investigator(s): B. Cohen, R. Stoddard Section, Township, Range: 26N, 15E, 12  
 Local relief (hillside, terrace, etc.): Valley floor Local Relief (concave, convex, none): Convex Slope (%): 5  
 Subregion (LRR): D Lat: 40.1181 Long: -120.2353 Datum: NAD83  
 Soil Map Unit Name: Mottsville Gravelly Loamy Coarse Sand, 2 to 9 percent slopes NWI classification: FEW  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Strange indicators present with artmesia growing in wetland and wetland on slope in convex position. Still meets all 3 wetland indicators.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: <u>    </u> )

<b>Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:</b>  								
<b>Remarks:</b> Primary hydrology evidenced by surface water and saturation and water table within 12 inches of the soil surface. In addition saturation is visible on aerial imagery and passes FAC-Neutral Test.								

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 13-10x Feature ID: U05-10x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/21/2020  
 Investigator(s): B. Cohen, R. Stoddard Section, Township, Range: 26N, 16E, 18  
 Local relief (hillside, terrace, etc.): Road slope Local Relief (concave, convex, none): Convex Slope (%): 15  
 Subregion (LRR): D Lat: 40.115 Long: -120.2273 Datum: NAD83  
 Soil Map Unit Name: Truckee Loam, 0 to 2 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>    </u> No <u>x</u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>x</u>
Hydric Soil Present?	Yes <u>    </u> No <u>x</u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Upland pair point to U05-10x, hydrology present as saturation but not dominated by hydrophytic vegetation and lacks hydric soil indicators.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECEENDING ORDER

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 19-10x Feature ID: W9-10x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/22/2020  
 Investigator(s): B. Cohen, R. Stoddard Section, Township, Range: 25N, 17E, 21  
 Local relief (hillside, terrace, etc.): Roadside depression Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 40.0013 Long: -120.0865 Datum: NAD83  
 Soil Map Unit Name: Calpine Sandy Loam, 0 to 2 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil Yes, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: Potentially in relict channel or connect to water movement or changed hydrology. Classified as riparian/fresh emergent wetland.  
 All three wetland indicators present, soils are problematic and assumed hydric - see soil remarks.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESEENDING ORDER

3/3 Abbrev.	Species Name	Absolute	Dominant	Indicator

<b>Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)</b>								
<input type="checkbox"/> Histosol (A1) <input type="checkbox"/> Histic Epipedon (A2) <input type="checkbox"/> Black Histic (A3) <input type="checkbox"/> Hydrogen Sulfide (A4) <input type="checkbox"/> Stratified Layers (A5) ( <b>LRR C</b> ) <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR D</b> ) <input type="checkbox"/> Depleted Below Dark Surface (A11) <input type="checkbox"/> Thick Dark Surface (A12) <input type="checkbox"/> Sandy Mucky Mineral (S1) <input type="checkbox"/> Sandy Gleyed Matrix (S4)			<input checked="" type="checkbox"/> Sandy Redox (S5) <input type="checkbox"/> Stripped Matrix (S6) <input type="checkbox"/> Loamy Mucky Mineral (F1) <input type="checkbox"/> Loamy Gleyed Matrix (F2) <input type="checkbox"/> Depleted Matrix (F3) <input type="checkbox"/> Redox Dark Surface (F6) <input type="checkbox"/> Depleted Dark Surface (F7) <input type="checkbox"/> Redox Depressions (F8) <input type="checkbox"/> Vernal Pools (F9)			<b>Indicators for Problematic Hydric Soils<sup>3</sup>:</b> <input type="checkbox"/> 1 cm Muck (A9) ( <b>LRR C</b> ) <input type="checkbox"/> 2 cm Muck (A10) ( <b>LRR B</b> ) <input type="checkbox"/> Reduced Vertic (F18) <input type="checkbox"/> Red Parent Material (TF2) <input checked="" type="checkbox"/> Other (Explain in Remarks)		
<sup>3</sup> Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.								
<b>Restrictive Layer (if present):</b> Type: _____ Depth (inches): _____						<b>Hydric Soil Present?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Soils are problematic. They do not strictly meet indicator S5 or show a depleted matrix. However the feature is in a concave position with likely seasonally ponded soils, primary hydrology and a dominance of hydrophytic vegetation. Soil nearly meets indicator S5 and nearly has a depleted matrix however the target layer does not have a chroma of 2 or less. The layer directly above target layer is dark and has redox and target layer has high percentage of prominent redox. For these reasons soil is assumed hydric

<input type="checkbox"/> Sandy Gleyed Matrix (S4)			<sup>3</sup> Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.					
<b>Restrictive Layer (if present):</b> Type: _____ Depth (inches): _____						<b>Hydric Soil Present?</b> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
<b>Remarks:</b> Large rocks present that seem introduced. Soil is problematic. Region lacks redox features in many wetlands. The soil is disturbed and likely manipulated but has primary hydrology and a dominance of hydrophytic plants in a concave surface and likely seasonally ponded. Soil matrix is depleted at 6 inches and below but lacks redox features to satisfy criteria for indicator F3 but shows strong depletion matrix value and chroma therefore soil is assumed hydric.

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 16-10x Feature ID: NW2-10x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/22/2020  
 Investigator(s): B. Cohen, R. Stoddard Section, Township, Range: 25N, 16E, 01  
 Local relief (hillside, terrace, etc.): Floodplain Local Relief (concave, convex, none): Concave Slope (%): 3  
 Subregion (LRR): D Lat: 40.052 Long: -120.127 Datum: NAD83  
 Soil Map Unit Name: Fluvents-Riverwash Complex, 0 to 1 percent slopes NWI classification: none  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation Yes, Soil No, or Hydrology Yes significantly disturbed?      Are "Normal Circumstances" present? Yes      No X  
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>    </u> No <u>x</u>
Hydric Soil Present?	Yes <u>    </u> No <u>x</u>	
Wetland Hydrology Present?	Yes <u>    </u> No <u>x</u>	

Remarks: Part of the riparian zone on both sides of river may have been graded or disturbed. May have been riparian wetland at one time especially on south side of river. Dominant hydrophytic vegetation but lacks hydrology and hydric soils.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

<b>Sampling Point:</b> 10-11x		<b>Feature ID:</b> D01-11x		<b>Date:</b> 4/21/2020	
<b>Project:</b> Zayo Fiberoptic					
<b>Location:</b> Lassen County			<b>Photo begin/end file#:</b> See Field Photos		
<b>Investigator(s):</b> M. Oats, L. Hoffman					
Y <input checked="" type="checkbox"/> / N <input type="checkbox"/> Do normal circumstances exist on the site? Y <input type="checkbox"/> / N <input checked="" type="checkbox"/> Is the site significantly disturbed?		<b>Location Details:</b>  <b>Projection:</b> Lambert <b>Datum:</b> NAD83 <b>Coordinates:</b> 39.8920, -120.0181			
<b>Potential anthropogenic influences on the channel system:</b> Manipulated drainage that flows from culvert.					
<b>Brief site description:</b> Drainage flows from culvert potentially going to sheet flow out of ROW.					
<b>Checklist of resources (if available):</b> <div style="display: flex; justify-content: space-between;"> <div style="width: 45%;"> <input checked="" type="checkbox"/> Aerial photography  <b>Dates:</b> _____  <input checked="" type="checkbox"/> Topographic maps  <input type="checkbox"/> Geologic maps  <input type="checkbox"/> Vegetation maps  <input checked="" type="checkbox"/> Soils maps  <input type="checkbox"/> Rainfall/precipitation maps  <input type="checkbox"/> Existing delineation(s) for site  <input checked="" type="checkbox"/> Global positioning system (GPS)  <input type="checkbox"/> Other studies: _____         </div> <div style="width: 45%;"> <input type="checkbox"/> Stream gage data  <b>Gage number:</b> _____  <b>Period of record:</b> _____  <input type="checkbox"/> History of recent effective discharges  <input type="checkbox"/> Results of flood frequency analysis  <input type="checkbox"/> Most recent shift-adjusted rating  <input type="checkbox"/> Gage heights for 2-, 5-, 10-, and 25-year events and the most recent event exceeding a 5-year event         </div> </div>					
<b>Hydrogeomorphic Floodplain Units</b> 					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHWM:</b> 1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site. 2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units. 3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units. a) Record the floodplain unit and GPS position. b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit. c) Identify any indicators present at the location. 4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section. 5. Identify the OHWM and record the indicators. Record the OHWM position via: <div style="display: flex; justify-content: space-between; margin-top: 10px;"> <div style="width: 45%;"> <input type="checkbox"/> Mapping on aerial photograph  <input type="checkbox"/> Digitized on computer         </div> <div style="width: 45%;"> <input checked="" type="checkbox"/> GPS  <input type="checkbox"/> Other: _____         </div> </div>

<p style="text-align: center;"><b>Hydrogeomorphic Floodplain Units</b></p>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHW M and record the indicators. Record the OHW M position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 01-11x Feature ID: W01-11x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/20/2020  
 Investigator(s): M. Oats, L. Hoffman Section, Township, Range: 24N, 17E, 12  
 Local relief (hillside, terrace, etc.): Roadside depression Local Relief (concave, convex, none): Concave Slope (%): 2  
 Subregion (LRR): D Lat: 39.9514 Long: -120.0323 Datum: NAD 83  
 Soil Map Unit Name: Pits and Dumps NWI classification: None  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: All three wetland parameters observed, indicating a wetland sample point.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status

%Bare Ground in Herb Stratum: 5 % Cover of Biotic Crust:     

### Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>50</u>	x 2 = <u>100</u>
FAC species <u>75</u>	x 3 = <u>225</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>125</u> (A)	<u>325</u> (B)
Prevalence Index = B/A = <u>2.6</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation

Yes 2 - Dominance Test is >50%

Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>

     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)

     5 - Wetland Non-Vascular Plants<sup>1</sup>

     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic Vegetation Present?

Yes X No     

Remarks: Hydrophytic vegetation observed as indicated by a dominance of FAC and FACW vegetation.

SOIL							Sampling Point: 01-11x	
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>

--	--	--

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**  
 Type: None  
 Depth (inches): N/A

**Hydric Soil Present?**  
 Yes ☒ No ☐

**Remarks:** Sample point satisfies indicator F8, Redox Depressions as wetland is within a depressional feature, with two culverts, likely subject to ponding occasionally in the wetter months. Soil has 5 percent or more prominent redox concentrations occurring as soft masses and pore linings in a layer that is 2 inches or more thick and starts at a depth less than 4 inches from the soil surface.

**HYDROLOGY**

# WETLAND DETERMINATION DATA FORM -Arid West Region

v.111618

Project/Site: Zayo Fiberoptic City/County: Lassen County Sampling Point: 04-11x Feature ID: W02-11x  
 Applicant/Owner: Zayo Group State: Ca Sampling Date: 4/20/2020  
 Investigator(s): M. Oats, L. Hoffman Section, Township, Range: 24N, 17E, 24  
 Local relief (hillside, terrace, etc.): River terrace Local Relief (concave, convex, none): Convex Slope (%): 1  
 Subregion (LRR): D Lat: 39.9217 Long: -120.019 Datum: NAD 83  
 Soil Map Unit Name: Fluvents Riverwash Complex, 0 to 1 percent slopes NWI classification: None  
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No      (If no, explain in Remarks.)  
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed?      Are "Normal Circumstances" present? Yes X No       
 Are Vegetation No, Soil No, or Hydrology No naturally problematic?      (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <u>x</u> No <u>    </u>	Is the Sampled Area within a Wetland? Yes <u>x</u> No <u>    </u>
Hydric Soil Present?	Yes <u>x</u> No <u>    </u>	
Wetland Hydrology Present?	Yes <u>x</u> No <u>    </u>	

Remarks: All three wetland parameters observed.

## VEGETATION – Use scientific names of plants. List all species in the plot. MUST LIST COVER IN DESECCENDING ORDER

3/3 Abbrev.	Species Name	Absolute % Cover	Dominant Species?	Indicator Status
Tree Stratum (Plot size: <u>    </u> )

### Dominance Test worksheet:

Number of Dominant Species  
That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant  
Species Across All Strata: 2 (B)

Percent of Dominant Species  
That Are OBL, FACW, or FAC: 100% (A/B)

### Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species <u>0</u>	x 1 = <u>0</u>
FACW species <u>135</u>	x 2 = <u>270</u>
FAC species <u>0</u>	x 3 = <u>0</u>
FACU species <u>0</u>	x 4 = <u>0</u>
UPL species <u>0</u>	x 5 = <u>0</u>
Column Totals: <u>135</u> (A)	<u>270</u> (B)
Prevalence Index = B/A = <u>2</u>	

### Hydrophytic Vegetation Indicators:

     1 - Rapid Test for Hydrophytic Vegetation  
Yes 2 - Dominance Test is >50%  
Yes 3 - Prevalence Index is ≤3.0<sup>1</sup>  
     4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
     5 - Wetland Non-Vascular Plants<sup>1</sup>  
     6 - Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
<sup>1</sup> Indicators of hydric soil and wetland hydrology must be present unless disturbed or problematic.

Hydrophytic  
Vegetation  
Present?

Yes X No     

Remarks: Hydrophytic vegetation observed as indicated by a dominance of FACW vegetation.

SOIL							Sampling Point: 04-11x	
<b>Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)</b>

<input checked="" type="checkbox"/> Global positioning system (GPS)					
<input type="checkbox"/> Other studies					
<p style="text-align: center;"><b>Hydrogeomorphic Floodplain Units</b></p>					
<b>Procedure for identifying and characterizing the floodplain units to assist in identifying the OHW M:</b>					
1. Walk the channel and floodplain within the study area to get an impression of the geomorphology and vegetation present at the site.					
2. Select a representative cross section across the channel. Draw the cross section and label the floodplain units.					
3. Determine a point on the cross section that is characteristic of one of the hydrogeomorphic floodplain units.					
a) Record the floodplain unit and GPS position.					
b) Describe the sediment texture (using the Wentworth class size) and the vegetation characteristics of the floodplain unit.					
c) Identify any indicators present at the location.					
4. Repeat for other points in different hydrogeomorphic floodplain units across the cross section.					
5. Identify the OHW M and record the indicators. Record the OHW M position via:					
<input type="checkbox"/> Mapping on aerial photograph		<input checked="" type="checkbox"/> GPS			
<input type="checkbox"/> Digitized on computer		<input type="checkbox"/> Other:

1/32 0.00061	0.0156	Medium silt	
1/64 0.00031	0.0078	Fine silt	
1/128 0.00015	0.0039	Very fine silt	
		Clay	Mud

Feature ID: D01-12x

Cross section ID:

Date: 4/22/2020 Time:

**Cross section drawing:****OHW**

GPS point: \_\_\_\_\_

**Indicators:**

Change in average sediment texture

Change in vegetation species

Change in vegetation cover

Break in bank slope

Other: \_\_\_\_\_

Other: \_\_\_\_\_

**Comments:**

No water present, likely non-vegetated roadside drainage ditch. Change in sediment as stream bed has small boulders in upper reach and a silty bottom with pebbles in lower reach. Drainage predominantly has *Artemisia* and *Sarcobatus* on slopes.

**Floodplain unit:**

Low-Flow Channel

Active Floodplain

Low Terrace

GPS point: \_\_\_\_\_

**Characteristics of the floodplain unit:**

Average sediment texture: \_\_\_\_\_

Total veg cover: \_\_\_\_\_ % Tree: \_\_\_\_\_ % Shrub: \_\_\_\_\_ % Herb: \_\_\_\_\_ %

Community successional stage:

NA

Early (herbaceous &amp; seedlings)

Mid (herbaceous, shrubs, saplings)

Late (herbaceous, shrubs, mature trees)

**Indicators:**

Mudcracks

Ripples

Drift and/or debris

Presence of bed and bank

Benches

Soil development

Surface relief

Other: \_\_\_\_\_

Other: \_\_\_\_\_

Other: \_\_\_\_\_

**Comments:**

# **APPENDIX E**

## **PLANT LIST**

The species listed in this table include all plant species observed at each sample point for wetlands, uplands, and other waters data points, as well as any other plant species observed within the entire study area for the project.

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Achillea millefolium</i>	Yarrow	Asteraceae	native	FACU
<i>Acmispon americanus</i> var. <i>americanus</i>	Spanish lotus	Fabaceae	native	UPL
<i>Acroptilon repens</i>	Russian knapweed	Asteraceae	non-native (invasive)	-
<i>Agastache parvifolia</i>	Small leaved horsemint	Lamiaceae	native	-
<i>Agoseris x elata</i>	Tall agoseris	Asteraceae	native	FAC
<i>Agoseris glauca</i> var. <i>glauca</i>	Short beaked agoseris	Asteraceae	native	FACU
<i>Agoseris grandiflora</i>	Giant mountain dandelion	Asteraceae	native	-
<i>Agoseris heterophylla</i>	Mountain dandelion	Asteraceae	native	-
<i>Agoseris parviflora</i>	False dandelion	Asteraceae	native	FACU
<i>Agropyron cristatum</i> ssp. <i>pectinatum</i>	Crested wheatgrass	Poaceae	non-native	-
<i>Aliciella micromeria</i>	Dainty gilia	Polemoniaceae	native	-
<i>Allium acuminatum</i>	Taper tipped onion	Alliaceae	native	-
<i>Allium anceps</i>	Twin leaved onion	Alliaceae	native	-
<i>Allium bisceptrum</i>	Twincrest onion	Alliaceae	native	FACU
<i>Allium lemmonii</i>	Lemmon's onion	Alliaceae	native	FACU
<i>Alopecurus pratensis</i>	Meadow foxtail	Poaceae	non-native	FACW
<i>Alyssum simplex</i>	Alyssum	Brassicaceae	non-native	-
<i>Amaranthus albus</i>	Tumbleweed	Amaranthaceae	non-native	FACU
<i>Amaranthus powellii</i>	Powell's amaranth	Amaranthaceae	native	-
<i>Amelanchier utahensis</i>	Pale leaved serviceberry	Rosaceae	native	FACU
<i>Amsinckia menziesii</i>	Fiddleneck	Boraginaceae	native	-
<i>Amsinckia tessellata</i>	Devil's lettuce	Boraginaceae	native	-
<i>Antennaria dimorpha</i>	Gray cushion pussytoes	Asteraceae	native	-
<i>Antennaria geyeri</i>	Geyer's pussytoes	Asteraceae	native	-
<i>Antennaria luzuloides</i>	Silvery brown pussytoes	Asteraceae	native	-
<i>Apera interrupta</i>	Dense silky bent	Poaceae	non-native	-
<i>Arctium lappa</i>	Greater burdock	Asteraceae	non-native	-
<i>Arnica fulgens</i>	Hillside arnica	Asteraceae	native	FACU
<i>Arnica sororia</i>	Twin arnica	Asteraceae	native	-
<i>Artemisia douglasiana</i>	California mugwort	Asteraceae	native	FAC
<i>Artemisia ludoviciana</i>	Silver wormwood	Asteraceae	native	FACU

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Artemisia spinescens</i>	Budsage	Asteraceae	native	-
<i>Artemisia tridentata</i> ssp. <i>tridentata</i>	Big sagebrush	Asteraceae	native	-
<i>Asclepias fascicularis</i>	Milkweed	Apocynaceae	native	FAC
<i>Asclepias speciosa</i>	Showy milkweed	Apocynaceae	native	FAC
<i>Astragalus agrestis</i>	Purple loco weed	Fabaceae	native	FAC
<i>Astragalus curvicaupus</i> var. <i>curvicaupus</i>	Curved pod milk vetch	Fabaceae	native	-
<i>Astragalus filipes</i>	Narrow pod locoweed	Fabaceae	native	-
<i>Astragalus iodanthus</i> var. <i>diaphanoides</i>	Snake milk vetch	Fabaceae	native	-
<i>Astragalus lentiginosus</i>	Freckled milk vetch	Fabaceae	native	UPL
<i>Astragalus malacus</i>	Shaggy milk vetch	Fabaceae	native	-
<i>Astragalus pulsiferae</i> var. <i>coronensis</i>	Modoc plateau milk vetch	Fabaceae	native	-
<i>Astragalus purshii</i>	Pursh's sheeppod	Fabaceae	native	-
<i>Astragalus whitneyi</i> var. <i>confusus</i>	Whitney's milk vetch	Fabaceae	native	-
<i>Atriplex confertifolia</i>	Spiny saltbush	Chenopodiaceae	native	-
<i>Atriplex gardneri</i> var. <i>falcata</i>	Sickle saltbush	Chenopodiaceae	native	-
<i>Balsamorhiza hirsuta</i>	Hairy balsam root	Asteraceae	native	-
<i>Balsamorhiza sagittata</i>	Arrow leaved balsamroot	Asteraceae	native	-
<i>Barbarea orthoceras</i>	Winter cress	Brassicaceae	native	FACW
<i>Beckmannia syzigachne</i>	American sloughgrass	Poaceae	native	OBL
<i>Blepharipappus scaber</i>	Blepharipappus	Asteraceae	native	-
<i>Boechera retrofracta</i>	Reflexed rockcress	Brassicaceae	native	-
<i>Boechera sparsiflora</i>	Sicklepod rockcress	Brassicaceae	native	-
<i>Brickellia</i> sp.	-	Asteraceae	-	-
<i>Briza maxima</i>	Rattlesnake grass	Poaceae	non-native (invasive)	-
<i>Bromus carinatus</i>	California brome grass	Poaceae	native	-
<i>Bromus hordeaceus</i>	Soft chess	Poaceae	non-native (invasive)	FACU
<i>Bromus inermis</i>	Smooth brome	Poaceae	non-native	FACU
<i>Bromus tectorum</i>	Downy chess	Poaceae	non-native (invasive)	-
<i>Calamagrostis canadensis</i> var. <i>canadensis</i>	Bluejoint	Poaceae	native	FACW
<i>Calystegia occidentalis</i>	Bush morning glory	Convolvulaceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Camassia quamash</i> ssp. <i>breviflora</i>	Small camas	Agavaceae	native	FACW
<i>Camelina microcarpa</i>	False flax	Brassicaceae	non-native	FACU
<i>Carduus nutans</i>	Nodding plumeless thistle	Asteraceae	non-native (invasive)	FACU
<i>Carex abrupta</i>	Abrupt beaked sedge	Cyperaceae	native	FAC
<i>Carex atherodes</i>	Slough sedge	Cyperaceae	native	OBL
<i>Carex athrostachya</i>	Slender leaved sedge	Cyperaceae	native	FACW
<i>Carex douglasii</i>	Douglas sedge	Cyperaceae	native	FAC
<i>Carex nebrascensis</i>	Nebraska sedge	Cyperaceae	native	OBL
<i>Carex pellita</i>	Woolly sedge	Cyperaceae	native	OBL
<i>Carex praegracilis</i>	Field sedge	Cyperaceae	native	FACW
<i>Carex rossii</i>	Ross' sedge	Cyperaceae	native	-
<i>Carex sheldonii</i>	Sheldon's sedge	Cyperaceae	native	OBL
<i>Castilleja chromosa</i>	Desert paintbrush	Orobanchaceae	native	-
<i>Castilleja nana</i>	Dwarf alpine paintbrush	Orobanchaceae	native	-
<i>Castilleja pilosa</i>	Pilose paintbrush	Orobanchaceae	native	-
<i>Castilleja tenuis</i>	Hairy owl's clover	Orobanchaceae	native	FAC
<i>Ceanothus prostratus</i>	Mahala mats	Rhamnaceae	native	-
<i>Centaurea solstitialis</i>	Yellow starthistle	Asteraceae	non-native (invasive)	-
<i>Centaurea stoebe</i> ssp. <i>micranthos</i>	Spotted knapweed	Asteraceae	non-native (invasive)	-
<i>Centromadia pungens</i> ssp. <i>pungens</i>	Common tarweed	Asteraceae	native	FAC
<i>Cercocarpus ledifolius</i>	Desert mountainmahogany	Rosaceae	native	-
<i>Chaenactis douglasii</i> var. <i>douglasii</i>	Dusty maidens	Asteraceae	native	-
<i>Chenopodium album</i>	Lambs quarters	Chenopodiaceae	non-native	FACU
<i>Chenopodium desiccatum</i>	Dry goosefoot	Chenopodiaceae	native	-
<i>Chenopodium simplex</i>	Large seeded goosefoot	Chenopodiaceae	native	-
<i>Chorispora tenella</i>	Crossflower	Brassicaceae	non-native (invasive)	-
<i>Chorizanthe watsonii</i>	Watson's spineflower	Polygonaceae	native	-
<i>Chylismia claviformis</i> ssp. <i>cruciformis</i>	Cruciform evening-primrose	Onagraceae	native	-
<i>Cichorium intybus</i>	Chicory	Asteraceae	non-native	FACU
<i>Cirsium arvense</i>	Canada thistle	Asteraceae	non-native (invasive)	FACU

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Cirsium inamoenum</i> var. <i>inamoenum</i>	Greene's thistle	Asteraceae	native	-
<i>Cirsium neomexicanum</i>	Desert thistle	Asteraceae	native	-
<i>Cirsium scariosum</i>	Elk thistle	Asteraceae	native	FAC
<i>Cirsium vulgare</i>	Bullthistle	Asteraceae	non-native (invasive)	FACU
<i>Clarkia lassenensis</i>	Lassen clarkia	Onagraceae	native	-
<i>Clarkia purpurea</i>	Purple clarkia	Onagraceae	native	-
<i>Clarkia purpurea</i> ssp. <i>quadrivulnera</i>	Purple clarkia	Onagraceae	native	-
<i>Clarkia</i> sp.	-	Onagraceae	-	-
<i>Claytonia rubra</i>	Red stemmed spring beauty	Montiaceae	native	-
<i>Collinsia parviflora</i>	Few flowered blue eyed mary	Plantaginaceae	native	-
<i>Collomia grandiflora</i>	Large flowered collomia	Polemoniaceae	native	-
<i>Conium maculatum</i>	Poison hemlock	Apiaceae	non-native (invasive)	FACW
<i>Convolvulus arvensis</i>	Field bindweed	Convolvulaceae	non-native (invasive)	-
<i>Cordylanthus ramosus</i>	Bushy bird's beak	Orobanchaceae	native	FACU
<i>Crepis acuminata</i>	Tall hawksbeard	Asteraceae	native	-
<i>Crepis bakeri</i>	Baker's hawksbeard	Asteraceae	native	-
<i>Crepis intermedia</i>	Intermediate hawksbeard	Asteraceae	native	-
<i>Crepis modocensis</i> ssp. <i>modocensis</i>	Modoc hawksbeard	Asteraceae	native	-
<i>Crepis modocensis</i> ssp. <i>subacaulis</i>	Modoc hawksbeard	Asteraceae	native	-
<i>Crepis occidentalis</i> ssp. <i>occidentalis</i>	Largeflower hawksbeard	Asteraceae	native	-
<i>Crepis occidentalis</i> ssp. <i>pumila</i>	Largeflower hawksbeard	Asteraceae	native	-
<i>Cressa truxillensis</i>	Alkali weed	Convolvulaceae	native	FACW
<i>Cryptantha circumscissa</i> var. <i>circumscissa</i>	Cushion cryptantha	Boraginaceae	native	-
<i>Cryptantha echinella</i>	Prickly cryptantha	Boraginaceae	native	-
<i>Cryptantha intermedia</i>	Common cryptanth	Boraginaceae	native	-
<i>Cuscuta</i> sp.	-	Convolvulaceae	-	-
<i>Cusickiella douglasii</i>	Alkali draba	Brassicaceae	native	-
<i>Danthonia californica</i>	California oatgrass	Poaceae	native	FAC
<i>Danthonia unispicata</i>	One spiked oatgrass	Poaceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Delphinium andersonii</i>	Anderson larkspur	Ranunculaceae	native	-
<i>Delphinium nuttallianum</i>	Nuttall's larkspur	Ranunculaceae	native	FAC
<i>Deschampsia cespitosa</i>	Tufted hair grass	Poaceae	native	FACW
<i>Descurainia sophia</i>	Herb sophia	Brassicaceae	non-native (invasive)	-
<i>Dipsacus</i> sp.	-	Dipsacaceae	-	-
<i>Distichlis spicata</i>	Saltgrass	Poaceae	native	FAC
<i>Downingia insignis</i>	Harlequin downingia	Campanulaceae	native	OBL
<i>Downingia laeta</i>	Great basin downingia	Campanulaceae	native	OBL
<i>Draba verna</i>	Whitlow grass	Brassicaceae	native	-
<i>Drymocallis glandulosa</i>	Sticky cinquefoil	Rosaceae	native	FAC
<i>Eleocharis palustris</i>	Common spikerush	Cyperaceae	native	OBL
<i>Elymus caput-medusae</i>	Medusa head	Poaceae	non-native	-
<i>Elymus cinereus</i>	Great basin wild rye	Poaceae	native	FAC
<i>Elymus elymoides</i>	Squirreltail grass	Poaceae	native	FACU
<i>Elymus glaucus</i> ssp. <i>glaucus</i>	Blue wild rye	Poaceae	native	FACU
<i>Elymus hispidus</i>	Intermediate wheatgrass	Poaceae	non-native	-
<i>Elymus ponticus</i>	Tall wheatgrass	Poaceae	non-native	-
<i>Elymus spicatus</i>	Blue bunch wheatgrass	Poaceae	native	-
<i>Elymus triticoides</i>	Beardless wild rye	Poaceae	native	FAC
<i>Ephedra viridis</i>	Green ephedra	Ephedraceae	native	-
<i>Epilobium brachycarpum</i>	Willow herb	Onagraceae	native	-
<i>Epilobium densiflorum</i>	Willow herb	Onagraceae	native	FACW
<i>Equisetum hyemale</i> ssp. <i>affine</i>	Giant scouring rush	Equisetaceae	native	FACW
<i>Equisetum laevigatum</i>	Smooth scouring rush	Equisetaceae	native	FACW
<i>Eremogone aculeata</i>	Prickly sandwort	Caryophyllaceae	native	-
<i>Eremogone congesta</i> var. <i>crassula</i>	Rough sandwort	Caryophyllaceae	native	-
<i>Eremothera boothii</i> ssp. <i>alyssooides</i>	Pine creek evening-primrose	Onagraceae	native	-
<i>Eriastrum signatum</i>	-	Polemoniaceae	native	-
<i>Eriastrum sparsiflorum</i>	Great basin eriastrum	Polemoniaceae	native	-
<i>Ericameria bloomeri</i>	Bloomer's goldenbrush	Asteraceae	native	-
<i>Ericameria nauseosa</i>	Rubber rabbitbrush	Asteraceae	native	-
<i>Ericameria nauseosa</i> var. <i>hololeuca</i>	Common rabbitbrush	Asteraceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Ericameria nauseosa</i> var. <i>speciosa</i>	Rubber rabbitbrush	Asteraceae	native	-
<i>Erigeron aphanactis</i>	Rayless shaggy fleabane	Asteraceae	native	-
<i>Erigeron bloomeri</i> var. <i>bloomeri</i>	Scabland fleabane	Asteraceae	native	-
<i>Erigeron divergens</i>	Diffuse daisy	Asteraceae	native	-
<i>Erigeron elegantulus</i>	Volcanic daisy	Asteraceae	native	-
<i>Erigeron linearis</i>	Narrow leaved fleabane	Asteraceae	native	-
<i>Erigeron pumilus</i> var. <i>intermedius</i>	Shaggy fleabane	Asteraceae	native	-
<i>Eriogonum caespitosum</i>	Clumping buckwheat	Polygonaceae	native	-
<i>Eriogonum collinum</i>	Hill buckwheat	Polygonaceae	native	-
<i>Eriogonum elatum</i> var. <i>elatum</i>	Tall buckwheat	Polygonaceae	native	-
<i>Eriogonum heracleoides</i> var. <i>heracleoides</i>	Parsnip flowered buckwheat	Polygonaceae	native	-
<i>Eriogonum microthecum</i> var. <i>ambiguum</i>	Obscure buckwheat	Polygonaceae	native	-
<i>Eriogonum microthecum</i> var. <i>laxiflorum</i>	Bush eriogonum	Polygonaceae	native	-
<i>Eriogonum nudum</i> var. <i>nudum</i>	Nude buckwheat	Polygonaceae	native	-
<i>Eriogonum nudum</i> var. <i>pubiflorum</i>	Hairy flowered buckwheat	Polygonaceae	native	-
<i>Eriogonum sphaerocephalum</i>	Round headed buckwheat	Polygonaceae	native	-
<i>Eriogonum sphaerocephalum</i> var. <i>sphaerocephalum</i>	Round headed buckwheat	Polygonaceae	native	-
<i>Eriogonum strictum</i> var. <i>anserinum</i>	Blue mountain buckwheat	Polygonaceae	native	-
<i>Eriogonum umbellatum</i> var. <i>dumosum</i>	Many flowered sulfur flower	Polygonaceae	native	-
<i>Eriogonum umbellatum</i> var. <i>modocense</i>	Sulphur flower buckwheat	Polygonaceae	native	-
<i>Eriogonum vimineum</i>	Wicker stemmed eriogonum	Polygonaceae	native	-
<i>Eriophyllum lanatum</i>	Wooly sunflower	Asteraceae	native	-
<i>Eriophyllum lanatum</i> var. <i>achilleoides</i>	Yarrow leaved woolly sunflower	Asteraceae	native	-
<i>Eriophyllum lanatum</i> var. <i>integrifolium</i>	Oregon sunshine	Asteraceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Erodium cicutarium</i>	Coastal heron's bill	Geraniaceae	non-native (invasive)	-
<i>Erythranthe inflatula</i>	Ephemeral monkeyflower	Phrymaceae	native	-
<i>Festuca bromoides</i>	Brome fescue	Poaceae	non-native	FAC
<i>Festuca octoflora</i>	Sixweeks grass	Poaceae	native	UPL
<i>Festuca pratensis</i>	Meadow fescue	Poaceae	non-native	FACU
<i>Frasera albicaulis</i> var. <i>modocensis</i>	Modoc fraseria	Gentianaceae	native	-
<i>Fritillaria atropurpurea</i>	Spotted mountain bells	Liliaceae	native	-
<i>Galium aparine</i>	Cleavers	Rubiaceae	native	FACU
<i>Gayophytum humile</i>	Dwarf groundsmoke	Onagraceae	native	FAC
<i>Gayophytum ramosissimum</i>	Pinyon gayophytum	Onagraceae	native	-
<i>Geum triflorum</i> var. <i>ciliatum</i>	Prairie-smoke	Rosaceae	native	FACU
<i>Gilia salticola</i>	Granite gilia	Polemoniaceae	native	-
<i>Gnaphalium palustre</i>	Lowland cudweed	Asteraceae	native	FACW
<i>Gratiola ebracteata</i>	Common hedge hyssop	Plantaginaceae	native	OBL
<i>Gratiola heterosepala</i>	Boggs lake hedge hyssop	Plantaginaceae	native	OBL
<i>Grayia spinosa</i>	Hop sage	Chenopodiaceae	native	-
<i>Grindelia nana</i>	Idaho gumweed	Asteraceae	native	FACW
<i>Grindelia</i> sp.	-	Asteraceae	-	-
<i>Grindelia squarrosa</i> var. <i>serrulata</i>	Curlycup gumweed	Asteraceae	non-native	FACU
<i>Hackelia cusickii</i>	Cusick stickweed	Boraginaceae	native	-
<i>Halogeton glomeratus</i>	Halogeton	Chenopodiaceae	non-native (invasive)	-
<i>Helianthus annuus</i>	Hairy leaved sunflower	Asteraceae	native	FACU
<i>Helianthus cusickii</i>	Cusick's sunflower	Asteraceae	native	-
<i>Hemizonella minima</i>	Opposite leaved tarweed	Asteraceae	native	-
<i>Hesperochiron californicus</i>	California hesperochiron	Boraginaceae	native	FACU
<i>Hesperolinon micranthum</i>	Small flower western flax	Linaceae	native	-
<i>Heterocodon rariflorum</i>	Heterocodon	Campanulaceae	native	FACW
<i>Holosteum umbellatum</i> ssp. <i>umbellatum</i>	Jagged chickweed	Caryophyllaceae	non-native	-
<i>Hordeum brachyantherum</i>	Meadow barley	Poaceae	native	FACW
<i>Hordeum jubatum</i> ssp. <i>jubatum</i>	Foxtail barley, squirreltail barley	Poaceae	native	FAC

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Hordeum murinum</i> ssp. <i>murinum</i>	Wall barley	Poaceae	non-native	FACU
<i>Hydrophyllum</i> sp.	-	Boraginaceae	-	-
<i>Hymenoxys lemmonii</i>	Lemmon's goldflower	Asteraceae	native	-
<i>Hypericum perforatum</i> ssp. <i>perforatum</i>	Klamathweed	Hypericaceae	non-native	FACU
<i>Isatis tinctoria</i>	Dyers woad	Brassicaceae	non-native (invasive)	-
<i>Isoetes</i> sp.	-	Isoetaceae	-	-
<i>Iva axillaris</i>	Povertyweed	Asteraceae	native	FAC
<i>Juncus balticus</i> ssp. <i>ater</i>	Baltic rush	Juncaceae	native	FACW
<i>Juncus bufonius</i>	Common toad rush	Juncaceae	native	FACW
<i>Juncus effuses</i>	Soft rush	Juncaceae	Native	FACW
<i>Juncus hemiendytus</i> var. <i>abjectus</i>	Center basin rush	Juncaceae	native	OBL
<i>Juncus leiospermus</i> var. <i>leiospermus</i>	Red bluff dwarf rush	Juncaceae	native	OBL
<i>Juncus nevadensis</i>	Sierra rush	Juncaceae	native	FACW
<i>Juncus tenuis</i>	Slender rush	Juncaceae	native	FACW
<i>Juncus tiehmii</i>	Tiehm's rush	Juncaceae	native	FACW
<i>Juniperus occidentalis</i>	Western juniper	Cupressaceae	native	-
<i>Koeleria macrantha</i>	June grass	Poaceae	native	-
<i>Lactuca serriola</i>	Prickly lettuce	Asteraceae	non-native (invasive)	FACU
<i>Lactuca</i> sp.	-	Asteraceae	-	-
<i>Lagophylla ramosissima</i>	Common hareleaf	Asteraceae	native	-
<i>Lathyrus jepsonii</i> var. <i>californicus</i>	California tule pea	Fabaceae	native	OBL
<i>Lathyrus lanszwertii</i> var. <i>lanszwertii</i>	Nevada pea	Fabaceae	native	UPL
<i>Lathyrus rigidus</i>	Rigid pea	Fabaceae	native	-
<i>Lepidium draba</i>	Whitetop	Brassicaceae	non-native (invasive)	-
<i>Lepidium latifolium</i>	Perennial pepperweed	Brassicaceae	non-native (invasive)	FAC
<i>Lepidium perfoliatum</i>	Klamath pepper grass	Brassicaceae	non-native	FACU
<i>Lewisia rediviva</i>	Bitter root	Montiaceae	native	-
<i>Linum lewisii</i> var. <i>lewisii</i>	Lewis' flax	Linaceae	native	-
<i>Lithophragma glabrum</i>	Bulbed woodland star	Saxifragaceae	native	-
<i>Lithospermum ruderales</i>	Western gromwell	Boraginaceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Lomatium canbyi</i>	Canby's lomatium	Apiaceae	native	-
<i>Lomatium grayi</i>	Gray's lomatium	Apiaceae	native	-
<i>Lomatium hendersonii</i>	Henderson's lomatium	Apiaceae	native	-
<i>Lomatium macrocarpum</i>	Large fruited lomatium	Apiaceae	native	-
<i>Lomatium nudicaule</i>	Pestle lomatium	Apiaceae	native	UPL
<i>Lomatium ravenii</i>	Raven's lomatium	Apiaceae	native	-
<i>Lomatium ravenii</i> var. <i>ravenii</i>	Raven's lomatium	Apiaceae	native	-
<i>Lomatium roseanum</i>	Biscuitroot	Apiaceae	native	-
<i>Lomatium triternatum</i>	Lewis's lomatium	Apiaceae	native	-
<i>Lomatium vaginatum</i>	Sheathed lomatium	Apiaceae	native	-
<i>Lotus corniculatus</i>	Bird's foot trefoil	Fabaceae	non-native (invasive)	FAC
<i>Lupinus arbustus</i>	Long spurred lupine	Fabaceae	native	-
<i>Lupinus argenteus</i> var. <i>argenteus</i>	Silvery lupine	Fabaceae	native	-
<i>Lupinus argenteus</i> var. <i>heteranthus</i>	Silvery lupine	Fabaceae	native	-
<i>Lupinus brevicaulis</i>	Short stemmed blue lupine	Fabaceae	native	-
<i>Lupinus latifolius</i> var. <i>barbatus</i>	Hair tuft lupine	Fabaceae	native	FACW
<i>Lupinus lepidus</i> var. <i>confertus</i>	Clustered tidy lupine	Fabaceae	native	-
<i>Lupinus microcarpus</i>	Chick lupine	Fabaceae	native	-
<i>Lupinus pusillus</i> var. <i>intermontanus</i>	Intermountain lupine	Fabaceae	native	-
<i>Lupinus saxosus</i>	Rock lupine	Fabaceae	native	-
<i>Madia citriodora</i>	Lemon scented tarweed	Asteraceae	native	-
<i>Madia glomerata</i>	Mountain tarweed	Asteraceae	native	FACU
<i>Matricaria discoidea</i>	Pineapple weed	Asteraceae	native	FACU
<i>Melica bulbosa</i>	Oniongrass	Poaceae	native	FACU
<i>Melilotus officinalis</i>	Yellow sweetclover	Fabaceae	non-native (invasive)	FACU
<i>Mentzelia albicaulis</i>	White stemmed blazing star	Loasaceae	native	-
<i>Mentzelia</i> sp.	-	Loasaceae	-	-
<i>Mertensia ciliata</i> var. <i>stomatechoides</i>	Streamside bluebells	Boraginaceae	native	FACW
<i>Mertensia oblongifolia</i> var. <i>nevadensis</i>	Sagebrush bluebells	Boraginaceae	native	FAC

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Mertensia oblongifolia</i> var. <i>oblongifolia</i>	Sagebrush bluebells	Boraginaceae	native	FAC
<i>Micranthes aprica</i>	Sierra saxifrage	Saxifragaceae	native	FACW
<i>Micranthes bryophora</i>	Bud saxifrage	Saxifragaceae	native	-
<i>Microseris laciniata</i> ssp. <i>laciniata</i>	Cut leaved scorzonella	Asteraceae	native	FACU
<i>Microsteris gracilis</i>	Slender phlox	Polemoniaceae	native	FACU
<i>Mimulus evanescens</i>	Disappearing monkeyflower	Phrymaceae	native	-
<i>Mimulus guttatus</i>	Yellow monkeyflower	Phrymaceae	native	OBL
<i>Mimulus pilosus</i>	Snouted monkeyflower	Phrymaceae	native	FACW
<i>Mimulus pulsiferae</i>	Candelabrum monkeyflower	Phrymaceae	native	-
<i>Mimulus suksdorfii</i>	Suksdorf's monkeyflower	Phrymaceae	native	FACU
<i>Monardella odoratissima</i>	Mountain monardella	Lamiaceae	native	FACU
<i>Monardella odoratissima</i> ssp. <i>glauc</i>	Follett's monardella	Lamiaceae	native	FACU
<i>Montia chamissoi</i>	Spring beauty	Montiaceae	native	OBL
<i>Montia fontana</i>	Water montia	Montiaceae	native	OBL
<i>Montia linearis</i>	Narrow leaved water chickweed	Montiaceae	native	FAC
<i>Muhlenbergia asperifolia</i>	Scratchgrass	Poaceae	native	FACW
<i>Muhlenbergia richardsonis</i>	Richardson's muhly	Poaceae	native	FAC
<i>Muilla transmontana</i>	Great basin muilla	Themidaceae	native	-
<i>Myosurus apetalus</i> var. <i>borealis</i>	Bristly mousetail	Ranunculaceae	native	OBL
<i>Myosurus minimus</i>	Little mousetail	Ranunculaceae	native	OBL
<i>Nama aretioides</i>	Purple nama	Boraginaceae	native	-
<i>Navarretia breweri</i>	Brewer's navarretia	Polemoniaceae	native	FAC
<i>Navarretia divaricata</i> ssp. <i>vividior</i>	Mountain navarretia	Polemoniaceae	native	-
<i>Navarretia intertexta</i>	Interwoven navarretia	Polemoniaceae	native	FACW
<i>Navarretia leucocephala</i> ssp. <i>leucocephala</i>	White headed navarretia	Polemoniaceae	native	OBL
<i>Navarretia sinistra</i>	Alva day's pincushionplant	Polemoniaceae	native	-
<i>Nemophila pedunculata</i>	Meadow nemophila	Boraginaceae	native	FAC
<i>Neoholmgrenia andina</i>	Plateau evening primrose	Onagraceae	native	UPL
<i>Nepeta cataria</i>	Catnip	Lamiaceae	non-native	FACU
<i>Nitrophila occidentalis</i>	Western nitrophila	Amaranthaceae	native	FACW

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Onopordum acanthium</i> ssp. <i>acanthium</i>	Scottish thistle	Asteraceae	non-native (invasive)	-
<i>Orobanche corymbosa</i>	Flat topped broomrape	Orobanchaceae	native	-
<i>Orobanche fasciculata</i>	Pinyon broomrape	Orobanchaceae	native	-
<i>Packera cana</i>	Woolly groundsel	Asteraceae	native	-
<i>Packera eurycephala</i>	Widehead groundsel	Asteraceae	native	-
<i>Paeonia brownii</i>	Peony	Paeoniaceae	native	-
<i>Panicum acuminatum</i>	Western witchgrass	Poaceae	native	FAC
<i>Pedicularis centranthera</i>	Dwarf lousewort	Orobanchaceae	native	-
<i>Penstemon deustus</i>	Rock penstemon	Plantaginaceae	native	-
<i>Penstemon roezlii</i>	Regel's mountain penstemon	Plantaginaceae	native	-
<i>Penstemon rydbergii</i> var. <i>oreocharis</i>	Meadow beardtongue	Plantaginaceae	native	FACU
<i>Penstemon speciosus</i>	Showy penstemon	Plantaginaceae	native	-
<i>Penstemon sudans</i>	Volcanic beardtongue	Plantaginaceae	native	-
<i>Peraphyllum ramosissimum</i>	Wild crab apple	Rosaceae	native	-
<i>Perideridia bolanderi</i> ssp. <i>bolanderi</i>	Bolander's yampah	Apiaceae	native	-
<i>Phacelia adenophora</i>	Glandular yellow phacelia	Boraginaceae	native	-
<i>Phacelia bicolor</i>	Twocolor phacelia	Boraginaceae	native	-
<i>Phacelia heterophylla</i> var. <i>virgata</i>	Varied leaf phacelia	Boraginaceae	native	FACU
<i>Phacelia humilis</i>	Low phacelia	Boraginaceae	native	-
<i>Phacelia humilis</i> var. <i>humilis</i>	Low phacelia	Boraginaceae	native	-
<i>Phacelia insularis</i>	Santa Rosa island phacelia	Boraginaceae	native	-
<i>Phacelia linearis</i>	Thread leaf phacelia	Boraginaceae	native	-
<i>Phacelia ramosissima</i>	Branching phacelia	Boraginaceae	native	FACU
<i>Phacelia thermalis</i>	Heat phacelia	Boraginaceae	native	-
<i>Phalaris arundinacea</i>	Reed canarygrass	Poaceae	native	FACW
<i>Phleum pratense</i>	Common timothy	Poaceae	non-native	FACU
<i>Phlox hoodii</i> ssp. <i>canescens</i>	Hood's phlox	Polemoniaceae	native	-
<i>Phlox stansburyi</i>	Cold desert phlox	Polemoniaceae	native	-
<i>Phoenicaulis cheiranthoides</i>	Dagger pod	Brassicaceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Phoradendron juniperinum</i>	Mistletoe	Viscaceae	native	-
<i>Phragmites australis</i>	Common reed	Poaceae	native	FACW
<i>Pinus jeffreyi</i>	Jeffrey pine	Pinaceae	native	-
<i>Pinus ponderosa</i>	Yellow pine	Pinaceae	native	FACU
<i>Plagiobothrys kingii</i>	Great basin popcornflower	Boraginaceae	native	-
<i>Plagiobothrys leptocladus</i>	Alkali plagiobothrys	Boraginaceae	native	OBL
<i>Plagiobothrys tenellus</i>	Slender popcornflower	Boraginaceae	native	FACU
<i>Plantago lanceolata</i>	Ribwort	Plantaginaceae	non-native (invasive)	FAC
<i>Plantago major</i>	Common plantain	Plantaginaceae	non-native	FAC
<i>Platanthera dilatata</i> var. <i>leucostachys</i>	Sierra bog orchid	Orchidaceae	native	FACW
<i>Plectritis ciliosa</i>	Long spurred plectritis	Valerianaceae	native	FACU
<i>Plectritis macrocera</i>	Plectritis	Valerianaceae	native	FACU
<i>Pleiocanthus spinosus</i>	Thorn skeletonweed	Asteraceae	native	-
<i>Poa bulbosa</i>	Bulbous bluegrass	Poaceae	non-native	FACU
<i>Poa cusickii</i> ssp. <i>cusickii</i>	Cusick's bluegrass	Poaceae	native	-
<i>Poa pratensis</i> ssp. <i>pratensis</i>	Kentucky bluegrass	Poaceae	non-native (invasive)	FAC
<i>Poa secunda</i>	Pine bluegrass	Poaceae	native	FACU
<i>Poa secunda</i> ssp. <i>juncifolia</i>	Rush bluegrass	Poaceae	native	FACU
<i>Poa secunda</i> ssp. <i>secunda</i>	Sandberg's bluegrass	Poaceae	native	FACU
<i>Polemonium micranthum</i>	Annual sky pilot	Polemoniaceae	native	FACU
<i>Polyctenium fremontii</i>	Fremont's polyctenium	Brassicaceae	native	FAC
<i>Polyctenium fremontii</i> var. <i>fremontii</i>	Fremont's polyctenium	Brassicaceae	native	FAC
<i>Polygala subspinoso</i>	Spiny milkwort	Polygonaceae	native	-
<i>Polygonum aviculare</i> ssp. <i>depressum</i>	Prostrate knotweed	Polygonaceae	non-native	FAC
<i>Polygonum aviculare</i> ssp. <i>rurivagum</i>	Prostrate knotweed	Polygonaceae	non-native	FAC
<i>Polygonum polygaloides</i> ssp. <i>esotericum</i>	Modoc county knotweed	Polygonaceae	native	FACW
<i>Polygonum polygaloides</i> ssp. <i>kelloggii</i>	Kellogg's knotweed	Polygonaceae	native	FACW
<i>Polygonum sawatchense</i> ssp. <i>sawatchense</i>	-	Polygonaceae	native	FACU

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Polypogon monspeliensis</i>	Annual beardgrass	Poaceae	non-native (invasive)	FACW
<i>Populus nigra</i>	Lombardy poplar	Salicaceae	non-native	-
<i>Populus</i> sp.	-	Salicaceae	-	-
<i>Populus tremuloides</i>	Quaking aspen	Salicaceae	native	FACU
<i>Potentilla biennis</i>	Biennial cinquefoil	Rosaceae	native	FACW
<i>Potentilla gracilis</i>	Northwest cinquefoil	Rosaceae	native	FAC
<i>Potentilla gracilis</i> var. <i>fastigiata</i>	Slender cinquefoil	Rosaceae	native	FAC
<i>Potentilla gracilis</i> var. <i>flabelliformis</i>	Cupform leaf cinquefoil	Rosaceae	native	FAC
<i>Poterium sanguisorba</i>	Garden burnet	Rosaceae	non-native	FACU
<i>Primula conjugens</i>	Bonneville shooting star	Primulaceae	native	FACU
<i>Prunus andersonii</i>	Desert peach	Rosaceae	native	-
<i>Prunus emarginata</i>	Bitter cherry	Rosaceae	native	FACU
<i>Prunus subcordata</i>	Sierra plum	Rosaceae	native	-
<i>Prunus virginiana</i> var. <i>demissa</i>	Western choke cherry	Rosaceae	native	FAC
<i>Psilocarphus oregonus</i>	Woolly marbles	Asteraceae	native	OBL
<i>Puccinellia nuttalliana</i>	Nuttall's alkali grass	Poaceae	native	FACW
<i>Purshia tridentata</i>	Antelope bush	Rosaceae	native	-
<i>Pyrrocoma lanceolata</i>	Intermountain pyrrocoma	Asteraceae	native	FAC
<i>Quercus kelloggii</i>	California black oak	Fagaceae	native	-
<i>Ranunculus californicus</i>	Common buttercup	Ranunculaceae	native	FACU
<i>Ranunculus glaberrimus</i> var. <i>glaberrimus</i>	Smooth buttercup	Ranunculaceae	native	FAC
<i>Ranunculus occidentalis</i> var. <i>dissectus</i>	Western buttercup	Ranunculaceae	native	FAC
<i>Ranunculus sceleratus</i>	Cursed crowfoot	Ranunculaceae	native	OBL
<i>Ranunculus testiculatus</i>	Tubercled crowfoot	Ranunculaceae	non-native	-
<i>Ribes aureum</i>	Golden currant	Grossulariaceae	native	FAC
<i>Ribes velutinum</i>	Desert gooseberry	Grossulariaceae	native	-
<i>Ribes viscosissimum</i>	Sticky current	Grossulariaceae	native	FAC
<i>Rigiopappus leptocladus</i>	Wire weed	Asteraceae	native	-
<i>Robinia pseudoacacia</i>	Black locust	Fabaceae	non-native (invasive)	FACU
<i>Rosa woodsii</i>	Woods' rose	Rosaceae	native	FACU
<i>Rosa woodsii</i> ssp. <i>ultramontana</i>	Interior rose	Rosaceae	native	FACU

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Rumex acetosella</i>	Sheep sorrel	Polygonaceae	non-native (invasive)	FACU
<i>Rumex crispus</i>	Curly dock	Polygonaceae	non-native (invasive)	FAC
<i>Rumex lacustris</i>	Lake dock	Polygonaceae	native	OBL
<i>Rumex triangulivalvis</i>	Willow dock	Polygonaceae	native	FACW
<i>Rumex venosus</i>	Winged dock	Polygonaceae	native	UPL
<i>Salix exigua</i>	Narrowleaf willow	Salicaceae	native	FACW
<i>Salix lasiandra</i>	Pacific willow	Salicaceae	native	FACW
<i>Salix lasiandra</i> var. <i>caudata</i>	Shining willow	Salicaceae	native	FACW
<i>Salix lasiolepis</i>	Arroyo willow	Salicaceae	native	FACW
<i>Salix lutea</i>	Yellow willow	Salicaceae	native	OBL
<i>Salsola tragus</i>	Russian thistle	Chenopodiaceae	non-native (invasive)	FACU
<i>Salvia aethiopis</i>	Mediterranean sage	Lamiaceae	non-native (invasive)	-
<i>Salvia dorrii</i> var. <i>dorrii</i>	Dorr's sage	Lamiaceae	native	-
<i>Sambucus nigra</i> ssp. <i>caerulea</i>	Blue elderberry	Adoxaceae	native	FAC
<i>Sarcobatus vermiculatus</i>	Greasewood	Sarcobataceae	native	FACU
<i>Schoenoplectus acutus</i> var. <i>occidentalis</i>	Tule	Cyperaceae	native	OBL
<i>Schoenoplectus americanus</i>	Chairmaker's bulrush	Cyperaceae	native	OBL
<i>Schoenoplectus</i> sp.	-	Cyperaceae	-	-
<i>Scirpus microcarpus</i>	Mountain bog bulrush	Cyperaceae	native	OBL
<i>Scrophularia californica</i>	California bee plant	Scrophulariaceae	native	FAC
<i>Scrophularia desertorum</i>	Desert figwort	Scrophulariaceae	native	-
<i>Scutellaria nana</i>	Little skullcap	Lamiaceae	native	-
<i>Secale cereale</i>	Rye	Poaceae	non-native	-
<i>Senecio hydrophiloides</i>	Sweet marsh ragwort	Asteraceae	native	FACW
<i>Senecio integerrimus</i>	Mountain butterweed	Asteraceae	native	FACU
<i>Senecio integerrimus</i> var. <i>exaltatus</i>	Columbia mountain butterweed	Asteraceae	native	FACU
<i>Senecio serra</i> var. <i>serra</i>	Tall ragwort	Asteraceae	native	FACU
<i>Sidalcea glaucescens</i>	Glaucous checker mallow	Malvaceae	native	-
<i>Sidalcea oregana</i>	Oregon checker mallow	Malvaceae	native	FACW
<i>Silene lemmonii</i>	Lemmon's catchfly	Caryophyllaceae	native	-
<i>Sisymbrium altissimum</i>	Tumble mustard	Brassicaceae	non-native	FACU

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Sisymbrium orientale</i>	Indian hedge mustard	Brassicaceae	non-native	-
<i>Solidago elongata</i>	West Coast Canada goldenrod	Asteraceae	native	FACU
<i>Spirodela polyrhiza</i>	Giant duckmeat	Araceae	native	OBL
<i>Sporobolus cryptandrus</i>	Sand dropseed	Poaceae	native	FACU
<i>Stanleya viridiflora</i>	Green flowered prince's plume	Brassicaceae	native	-
<i>Stenotus acaulis</i>	Stemless mock goldenweed	Asteraceae	native	-
<i>Stenotus lanuginosus</i> var. <i>lanuginosus</i>	Woolly stenotus	Asteraceae	native	-
<i>Stipa comata</i>	Needle-and-thread	Poaceae	native	-
<i>Stipa hymenoides</i>	Indian rice grass	Poaceae	native	UPL
<i>Stipa lemmonii</i>	Lemmon's needle grass	Poaceae	native	-
<i>Stipa nelsonii</i> var. <i>dorei</i>	Mountain needle grass	Poaceae	native	FACU
<i>Stipa occidentalis</i>	Western needlegrass	Poaceae	native	-
<i>Stipa occidentalis</i> var. <i>pubescens</i>	Common western needle grass	Poaceae	native	-
<i>Stipa thurberiana</i>	Thurber's needle grass	Poaceae	native	-
<i>Streptanthus cordatus</i> var. <i>cordatus</i>	Heartleaf jewelflower	Brassicaceae	native	-
<i>Suaeda calceoliformis</i>	Horned sea blite	Chenopodiaceae	native	FACW
<i>Symphoricarpos longiflorus</i>	Desert snowberry	Caprifoliaceae	native	-
<i>Symphoricarpos rotundifolius</i>	Mountain snowberry	Caprifoliaceae	native	-
<i>Symphyotrichum spathulatum</i>	Western mountain aster	Asteraceae	native	FAC
<i>Taraxacum officinale</i>	Red seeded dandelion	Asteraceae	non-native (invasive)	FACU
<i>Taraxia subacaulis</i>	Long leaved suncup	Onagraceae	native	FACW
<i>Taraxia tanacetifolia</i>	Tansy leaf evening primrose	Onagraceae	native	FACU
<i>Tetradymia canescens</i>	Gray horsebrush	Asteraceae	native	-
<i>Tetradymia glabrata</i>	Little leaf horsebrush	Asteraceae	native	-
<i>Tetradymia spinosa</i>	Spiny horsebrush	Asteraceae	native	-
<i>Thelypodium flexuosum</i>	Nodding thelypodium	Brassicaceae	native	-
<i>Thlaspi arvense</i>	Fan weed	Brassicaceae	non-native	UPL
<i>Tiquilia nuttallii</i>	Nuttall's coldenia	Boraginaceae	native	UPL
<i>Toxicoscordion paniculatum</i>	Foothill deathcamas	Melanthiaceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Toxicoscordion venenosum</i> var. <i>venenosum</i>	Meadow deathcamas	Melanthiaceae	native	FACU
<i>Tragopogon dubius</i>	Goat's beard	Asteraceae	non-native (invasive)	-
<i>Tragopogon porrifolius</i>	Salsify	Asteraceae	non-native	-
<i>Tribulus terrestris</i>	Puncture vine	Zygophyllaceae	non-native (invasive)	-
<i>Trifolium cyathiferum</i>	Cup clover	Fabaceae	native	FAC
<i>Trifolium gymnocarpon</i> ssp. <i>plummerae</i>	Plummer's clover	Fabaceae	native	-
<i>Trifolium hybridum</i>	Alsike clover	Fabaceae	non-native	FAC
<i>Trifolium macrocephalum</i>	Big headed clover	Fabaceae	native	FACU
<i>Trifolium microcephalum</i>	Small head clover	Fabaceae	native	FAC
<i>Trifolium variegatum</i>	Variegated clover	Fabaceae	native	FAC
<i>Trifolium willdenovii</i>	Tomcat clover	Fabaceae	native	FACW
<i>Triglochin maritima</i>	Seaside arrowgrass	Juncaginaceae	native	OBL
<i>Triticum aestivum</i>	Common wheat	Poaceae	non-native	-
<i>Typha angustifolia</i>	Narrow leaf cattail	Typhaceae	non-native	OBL
<i>Typha latifolia</i>	Boradleaf cattail	Typhaceae	native	OBL
<i>Ulmus pumila</i>	Siberian elm	Ulmaceae	non-native (invasive)	UPL
<i>Urtica dioica</i> ssp. <i>holosericea</i>	Stinging nettle	Urticaceae	native	FAC
<i>Ventenata dubia</i>	Ventenata grass	Poaceae	non-native	-
<i>Veratrum californicum</i> var. <i>californicum</i>	California corn lily	Melanthiaceae	native	FACW
<i>Verbascum blattaria</i>	Moth mullein	Scrophulariaceae	non-native	UPL
<i>Verbascum thapsus</i>	Woolly mullein	Scrophulariaceae	non-native (invasive)	FACU
<i>Verbena bracteata</i>	Bracted verbena	Verbenaceae	native	FAC
<i>Veronica americana</i>	American brooklime	Plantaginaceae	native	OBL
<i>Veronica anagallis-aquatica</i>	Water speedwell	Plantaginaceae	non-native	OBL
<i>Veronica arvensis</i>	Speedwell	Plantaginaceae	non-native	FACU
<i>Veronica peregrina</i> ssp. <i>xalapensis</i>	Speedwell	Plantaginaceae	native	FAC
<i>Veronica scutellata</i>	Marsh speedwell	Plantaginaceae	native	OBL
<i>Vicia americana</i> ssp. <i>americana</i>	American vetch	Fabaceae	native	FAC
<i>Viola beckwithii</i>	Great basin violet	Violaceae	native	-

Scientific Name	Common Name	Family	Origin	Wetland Status (AW 2016)
<i>Viola praemorsa</i>	Astoria violet	Violaceae	native	-
<i>Viola praemorsa</i> ssp. <i>linguifolia</i>	Astoria violet	Violaceae	native	-
<i>Viola purpurea</i> ssp. <i>aurea</i>	Golden violet	Violaceae	native	-
<i>Viola purpurea</i> ssp. <i>quercetorum</i>	Goosefoot yellow violet	Violaceae	native	-
<i>Vitis californica</i>	California wild grape	Vitaceae	native	FACU
<i>Wyethia mollis</i>	Woolly mule's ears	Asteraceae	native	-
<i>Xanthium strumarium</i>	Cocklebur	Asteraceae	native	FAC
<i>Zannichellia palustris</i>	Horned pondweed	Zannichelliaceae	native	OBL

# **APPENDIX F**

## **REPRESENTATIVE PHOTOGRAPHS**

## Segment 1

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
<p>Photo 1. Intermittent stream (D50-1bx, 50-1) with a break in bank slope and change in vegetation cover indicating the ordinary high water mark (OHWM).</p>	<p>Photo 2. Intermittent stream (D51-bx, 51-1) with OHWM same as top of bank (TOB).</p>
	
<p>Photo 3. Fresh emergent wetland (W50-1, 52-1) dominated by <i>Carex</i> sp.</p>	<p>Photo. 4 Upland (U50-, 53-1) adjacent to fresh emergent wetland dominated by perennial grasses.</p>

	
<p>Photo 5. Riparian wetland (W1-1x, 3-1x) adjacent to highway 395 dominated by <i>Salix</i> sp.</p>	<p>Photo 6. Upland (U1-1x, 4-1x) adjacent to riparian wetland dominated by perennial grasses.</p>
	
<p>Photo 7. Intermittent stream (D3-1x, 5-x) with TOB the same as OHWM.</p>	<p>Photo 8. Intermittent stream (D4-1x, 6-1x) with TOB the same as OHWM.</p>

Photo 9. Non-wetland (NW1-1x, 7-1x) across highway from wetland. Suspect area confirmed as upland.

Photo 10. Perennial stream (D5-1x, D8-1x) dominated by *Carex* sp.

Photo 11. Intermittent stream (D07-1bx, 15-1) with a break in bank slope and change in vegetation cover indicating the OHWM.

Photo 12. Intermittent stream (D7-1x, 10-1) with a break in bank slope and change in vegetation cover indicating the OHWM.

Photo 13. Perennial Stream (D06-1, 14-1) dominated by *Carex* sp.

Photo 14. Intermittent stream (D05-1bx, 11-1) with TOB the same as OHWM.

Photo 15. Riparian wetland (W06-1, 12-1) with sub-surface water and dominated by *Carex* sp.

Photo 16. Upland (U06-1, 13-1) adjacent to riparian wetland dominated by perennial grasses.

Photo 17. Intermittent stream (D04-1bx, 10-1) with break in bank slope indicating OHWM.

Photo 18. Non-vegetated ditch (D11-1x, 14-1x) with TOB the same as OHWM.

Photo 19. Riparian and fresh emergent wetland complex (W04-1c, 08-1) dominated by *Carex* sp.

Photo 20. Upland (U04-1, 09-1) adjacent to riparian wetland dominated by perennial grasses.

Photo 21. Intermittent stream (D12-1x, 15-1x) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 22. Perennial stream (D03-1, 7-1) with TOB the same as OHWM.

Photo 23. Intermittent stream (D016-1x, 19-1) with TOB the same as OHWM.

Photo 24. Intermittent stream (D017-1x, 20-1x) with break in bank slope and change in vegetation cover indicating OHWM.

	
<p>Photo 25. Intermittent stream (D018-1x, 21-1x) with TOB the same as OHWM.</p>	<p>Photo 26. Ephemeral stream (D52-1, 54-1) with break in bank slope and change in vegetation cover indicating OHWM.</p>
	
<p>Photo 27. Intermittent stream (D019-1x, 22-1x) with TOB the same as OHWM.</p>	<p>Photo 28. Intermittent stream (D53-1, 55-1x) with TOB the same as OHWM.</p>

Photo 29. Intermittent stream (D100-1x, 100-1x) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 30. Perennial stream (D20-1x, 23-1x) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 31. Perennial stream (D21-1x, 24-1x) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 32. Perennial stream (D107-1, 115-1) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 33. Small pond (D22-1x, 26-1x) adjacent to Highway 395.

Photo 34. Non-wetland (NW2-1x, 25-1x) in suspect area near small pond.

Photo 35. Seasonal wetland (W2-1x), 27-1x) with soil and hydrology wetland indicators but lacking wetland vegetation.

Photo 36. Upland (U2-1x), 28-1x) adjacent to seasonal wetland dominated by perennial grasses and sagebrush.

Photo 37. Intermittent stream (D106-1bx, 112-1) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 38. Intermittent stream (D24-1x, 30-1) with TOB the same as OHWM.

Photo 39. Intermittent stream (D105-1, 111-1) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 40. Intermittent stream (D104-1, 110-1) with TOB the same as OHWM.

Photo 41. Intermittent stream (D25-1x, 31-1x) with TOB the same as OHWM.

Photo 42. Wetland (W103-1, 113-1) fed by a seep or spring.

Photo 43. Upland (U103-1, 114-1) dominated by perennial grasses and sagebrush.

Photo 44. Ephemeral stream (D103-1, 109-1) with TOB the same as OHWM.

Photo 45. Ephemeral stream (D102-1, 108-1) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 46. Ephemeral stream (D26-1x, 31-1x) with TOB the same as OHWM.

Photo 47. Ephemeral stream (D26-1x, 31-1x) with TOB the same as OHWM.

Photo 48. Wetland (W102-1, 106-1) created by a seep or spring.

Photo 49. Upland (U102-1, 107-1) adjacent to wetland created by a seep or spring dominated by perennial grasses.

Photo 50. Non-vegetated ditch (D101-1, 105-1) with TOB the same as OHWM.

Photo 51. Wetland (W101-1, 103-1) created by a seep or spring.

Photo 52. Upland (U101-1, 104-1) adjacent to wetland created by a seep or spring.

Photo 53. Intermittent stream (D27-1x, 33-1x) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 54. Non-wetland (NW3-1x, 34-1x) with suspect riparian habitat confirmed as non-wetland.

Photo 55. Ephemeral stream (D100-1, 102-1) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 56. Wetland swale (W3-1x, 36-1x) that turns into a drainage outside the survey area.

Photo 57. Upland (U3-1x, 37-1x) adjacent to wetland swale dominated by perennial grasses.

Photo 58. Wetland swale (W100-1, 100-1) dominated by *Carex* sp.

Photo 59. Upland (U100-1, 101-1) adjacent to wetland swale dominated by perennial grasses.

Photo 60. Swale/ fresh emergent wetland (W5-1x, 40-1x) with minimal vegetation cover.

Photo 61. Upland (U5-1x, 41-1) adjacent to emergent wetland dominated by perennial grasses.

Photo 62. Riparian/ fresh emergent wetland complex (W03-1, 04-1) dominated by *Salix* sp. and *Carex* sp.

Photo 63. Upland (U03-1, 05-1) adjacent to riparian/ fresh emergent wetland complex dominated by perennial grasses.

Photo 64. Seasonal wetland (W01-1, 02-1) dominated by *Carex* sp.

Photo 65. Upland (U01-1, 03-1) adjacent to seasonal wetland dominated by perennial grasses.

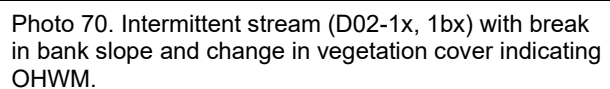

Photo 66. Non-wetland (NW5-1x, 42-1x) with suspect habitat confirmed as non-wetland.

Photo 67. Intermittent stream (D01-1, 01-1) with break in bank slope and change in vegetation cover indicating OHWM.

Photo 68. Fresh emergent wetland (W6-1x, 43-1x) situated within a swale.

## Segment 2

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
	
<p>Photo 1. Fresh emergent wetland (W64-2, 68-2) dominated by <i>Carex</i> sp.</p>	<p>Photo 2. Upland (U64-2, 69-2) adjacent to fresh emergent wetland and dominated by perennial grasses.</p>
<p>Photo 3. Fresh emergent wetland (W62-2, 66-2) appearing to be fed by nearby agricultural fields.</p>	<p>Photo 4. Upland (U62-2, 67-2) adjacent to fresh emergent wetland and dominated by perennial grasses.</p>

Photo 5. Fresh emergent wetland (W61-2, 64-2) appearing to be fed by nearby agricultural fields.

Photo 6. Upland (U61-2, 65-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 7. Ephemeral stream (D54-2bx, 63-2) with TOB the same as OHWM.

Photo 8. Fresh emergent wetland (W117-2, 128-2) dominated by *Carex* sp.

Photo 9. Upland (U117-2, 129-2) adjacent to fresh emergent wetland on road slope.

Photo 10. Seasonal wetland (W1-2x, 3-2x) dominated by *Carex* sp.

Photo 11. Upland (U1-2x, 4-2) adjacent to seasonal wetland and dominated by perennial grasses.

Photo 12. Irrigation canal (D3-2x, 5-2x) used to divert stream for agricultural purposes.

Photo 13. Irrigation canal (D5-2x, 7-2x) used to divert stream for agricultural purposes.

Photo 14. Perennial stream (D111-2bx, 127-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 15. Perennial stream (D110-2bx, 126-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 16. Non-wetland (NW1-2x, 10-2x) with suspect features confirmed as being upland.

Photo 17. Fresh emergent wetland (W115-2, 124-2) dominated by *Carex* sp.

Photo 18. Upland (U115-2, 125-2) with gravel fill material associated with roadway slope and dominated by perennial grasses.

Photo 19. Perennial stream (D108-2, 122-2) with OHWM the same as TOB.

Photo 20. Seasonal wetland (W3-2x, 13-2) dominated by *Carex* sp.

Photo 21. Upland (U3-2x, 14-2x) adjacent to seasonal wetland and dominated by perennial grasses.

Photo 22. Ephemeral stream (D9-2x, 12-2x) with TOB the same as OHWM.

Photo 23. Ephemeral stream (D107-2, 121-2) with TOB the same as OHWM.

Photo 24. Perennial stream (D106-2bx, 118-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 25. Fresh emergent wetland (W112-2, 119-2) dominated by *Salix* sp. and *Carex* sp.

Photo 26. Upland (U112-2, 120-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 27. Perennial stream (D105-2bx, 117-2) with break and bank slope and change in vegetation cover indicating OHWM.

Photo 28. Fresh emergent wetland (W4-2x, 17-2x) with hydrogen sulfide present in soils.

Photo 29. Upland (U4-2x, 18-2x) adjacent to fresh emergent wetland on road slope.

Photo 30. Perennial stream (D104-2, 116-2) with adjacent riparian wetland.

Photo 31. Fresh emergent wetland (W110-2, 114-2) dominated by *Carex* sp.

Photo 32. Upland (U110-2, 115-2) adjacent to fresh emergent wetland on road slope.

Photo 33. Intermittent stream (D12-2x, 19-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 34. Fresh emergent wetland (W108-2, 112-2) dominated by *Carex* sp. and *Salix* sp.

Photo 35. Upland (U108-2, 113-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 36. Intermittent stream (D13-2x, 113-2) with TOB the same as OHWM.

Photo 37. Irrigation canal (D14-2x, 21-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 38. Intermittent stream (D102-2, 110-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 39. Intermittent stream (D15-2x, 22-2x) with TOB the same as OHWM.

Photo 40. Intermittent stream (D16-2x, 23-2x) with TOB the same as OHWM.

Photo 41. Ephemeral stream (D100-2, 108-2) with TOB the same as OHWM.

Photo 42. Intermittent stream (D16-2bx, 23-2x) with TOB the same as OHWM.

Photo 43. Ephemeral stream (D103-2, 111-2) with TOB the same as OHWM.

Photo 44. Intermittent stream (D116-2cx, 23-2x) where change and slope and vegetation cover indicate OHWM.

Photo 45. Fresh emergent wetland (W103-2, 106-2) dominated by *Carex* sp.

Photo 46. Upland (U102-2, 105-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 47. Fresh emergent wetland (W101-2, 102-2) dominated by *Carex* sp.

Photo 48. Upland (U101-2, 103-2) adjacent to fresh emergent wetland on road slope.

Photo 49. Fresh emergent wetland (W5-2x, 24-2x) dominated by *Carex* sp.

Photo 50. Upland (U5-2x, 25-2x) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 51. Fresh emergent wetland (W100-2, 100-2) dominated by *Carex* sp.

Photo 52. Upland (U100-2, 101-2) adjacent to fresh emergent wetland on road slope.

Photo 53. Seasonal wetland (W6-2x, 26-2x) dominated by *Carex* sp.

Photo 54. Upland (U6-2x, 27-2x) adjacent to seasonal wetland and dominated by perennial grasses.

Photo 55. Ephemeral stream (D18-2x, 28-2x) with TOB the same as OHWM.

Photo 56. Fresh emergent wetland (W55-2, 57-2) dominated by *Carex* sp.

Photo 57. Upland (U55-2, 58-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 58. Seasonal wetland (W7-2x, 29-2x) dominated by *Carex* sp.

Photo 59. Upland (U7-2x, 30-2x) adjacent to seasonal wetland and dominated by perennial grasses.

Photo 60. Seasonal wetland (W8-2x, 31-2x) dominated by *Carex* sp.

Photo 61. Upland (U8-2x, 32-2x) adjacent to seasonal wetland and dominated by perennial grasses.

Photo 62. Perennial stream (D19-2x, 33-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 63. Perennial stream (D53-2, 56-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 64. Intermittent stream (D20-2x, 43-2x) with break in slope and change in vegetation cover indicating OHWM.

	
<p>Photo 65. Ephemeral stream (D52-2bx, 55-2) with break in slope and change in vegetation cover indicating OHWM.</p>	<p>Photo 66. Irrigation canal (D51-2bx, 54-2) with break in slope and change in vegetation cover indicating OHWM.</p>
	
<p>Photo 67. Riparian wetland (W9-2x, 37-2x) dominated by <i>Carex</i> sp.</p>	<p>Photo 68. Upland (U9-2x, 38-2x) adjacent to riparian wetland and dominated by perennial grasses.</p>

	
<p>Photo 69. Ephemeral stream (D24-2x, 40-2x) with break in slope and change in vegetation cover indicating OHWM.</p>	<p>Photo 70. Non-wetland (NW50-2) in suspect depressional feature.</p>
	
<p>Photo 71. Irrigation canal (D50-2bx, 52-2) with break in slope and change in vegetation cover indicating OHWM.</p>	<p>Photo 72. Irrigation canal (D25-2x, 41-2x) with break in slope and change in vegetation cover indicating OHWM.</p>

Photo 73. Fresh emergent wetland (W50-2, 50-2) dominated by *Carex* sp. and perennial grass sp.

Photo 74. Upland (U50-2, 51-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 75. Irrigation canal (D26-2x, 42-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 76. Fresh emergent wetland (W59-2, 59-2) dominated by *Carex* sp.

Photo 77. Upland (U59-2, 60-2) adjacent to riparian wetland and dominated by perennial grasses.

Photo 78. Fresh emergent wetland (W60-2, 61-2) dominated by *Carex* sp.

Photo 79. Upland (U60-2, 62-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 80. Irrigation canal (D27-2x, 43-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 81. Non-wetland (NW002-2) with suspect wetland features.

Photo 82. Non-vegetated ditch (D005-2, 019-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 83. Wetland swale (W012-2, 016-2) dominated by *Carex* sp. and perennial grass sp.

Photo 84. Upland (U012-2, 017-2) adjacent to wetland swale and dominated by perennial grasses.

Photo 85. Fresh emergent wetland (W007-2, 014-2) dominated by *Carex* sp.

Photo 86. Upland (U007-2, 015-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 87. Ephemeral stream (D004-2, 013-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 88. Perennial stream (D003-2, 012-2) where break in bank slope and vegetation cover indicate OHWM.

Photo 89. Non-wetland (NW001-2, 011-2) with suspicious wetland features, confirmed upland.

Photo 90. Perennial stream (D002-2, 010-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 91. Riparian/ fresh emergent wetland complex (W005-2, 008-2) dominated by *Salix* sp.

Photo 92. Upland (U005-2, 009-2) adjacent to riparian/ fresh emergent wetland complex and dominated by perennial grasses.

Photo 93. Perennial stream (D28-2x, 49-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 94. Riparian wetland (W12-2x, 50-2x) dominated by *Salix* sp. and *Carex* sp.

Photo 95. Upland (U12-2x, 51-2x) adjacent to riparian wetland and dominated by perennial grasses.

Photo 96. Non-wetland (NW2-2x, 48-2x) with suspicious features but lacking in wetland soil indicators.

Photo 97. Fresh emergent wetland (W003-2, 006-2) dominated by *Carex* sp.

Photo 98. Upland (U003-2, 007-2) adjacent to fresh emergent wetland and dominated by perennial grasses.

Photo 99. Riparian wetland (W13-2x, 52-2x) dominated by *Salix* sp.

Photo 100. Upland (U13-2x, 53-2x) adjacent to riparian wetland and dominated by perennial grasses.

Photo 101. Perennial stream (D29-2x, 54-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 102. Perennial stream (D001-2, 003-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 103. Riparian/ fresh emergent wetland complex (W002-2, 004-2) dominated by emergent grasses and *Salix* sp.

Photo 104. Upland (U002-2, 005-2) adjacent to riparian/ fresh emergent wetland complex and dominated by perennial grasses.

Photo 105. Seasonal wetland (W001-2, 001-2) dominated by *Salix* sp.

Photo 106. Upland (U001-2, 001-2) adjacent to seasonal wetland and dominated by perennial grasses.

Photo 107. Intermittent stream (D17-2x, 24-2x) with break in slope and change in vegetation cover indicating OHWM.

Photo 108. Ephemeral stream (D117-2, 137-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 109. Ephemeral stream (D116-2, 136-2) with break in slope and change in vegetation cover indicating OHWM.

Photo 110. Fresh emergent wetland (W118-2, 133-2) dominated by *Carex* sp.

Photo 111. Upland (U118-2, 134-2) adjacent to fresh emergent wetland dominated by perennial grasses.

Photo 112. Ephemeral stream (D115-2, 135-2) with break in slope and change in vegetation cover indicating OHWM.

	
<p>Photo 113. Ephemeral stream (D114-2, 132-2) with TOB the same as OHWM.</p>	<p>Photo 114. Ephemeral stream (D113-2, 131-2) with break in slope and change in vegetation cover indicating OHWM.</p>
	<p>No Photograph</p>
<p>Photo 115. Ephemeral stream (D112-2, 131-2) with break in slope and change in vegetation cover indicating OHWM.</p>	

### Segment 3

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

Photo 1. Ephemeral stream (D202-3, 202-3) adjacent to Hwy 395 in perennial grassland.	Photo 2. Ephemeral stream (D203-3, 203-3) with TOB the same as OHWM.
Photo 3. Ephemeral stream (D200-3, 200-3) with TOB the same as OHWM.	Photo 4. Ephemeral stream (D201-3, 201-3) with TOB the same as OHWM.

Photo 5. Riparian wetland (W06-3x) dominated by *Salix* sp. and *Carex* sp.

Photo 6. Seasonal wetland (U06-3x) adjacent to riparian wetland.

Photo 7. Riparian/fresh emergent wetland complex (W07-3x, 32-3x) dominated by *Salix* sp.

Photo 8. Upland (U7-3x, 33-3x) adjacent to riparian/fresh emergent wetland.

Photo 9. Riparian wetland (W09-3x, 36-3x) dominated by *Salix* sp.

Photo 10. Upland (U9-3x, 37-3x) adjacent to riparian wetland.

Photo 11. Riparian/fresh emergent wetland complex (W08-3x, 34-3x) dominated by *Salix* sp.

Photo 12. Upland (U08-3x, 35-3x) adjacent to riparian/fresh emergent wetland.

Photo 13. Riparian wetland (W205-3, 206-3) dominated by *Typha* sp.

Photo 14. Upland (U205-3, 207-3) adjacent to riparian wetland.

Photo 15. Perennial stream (D205-3, 205-3) with OHWM the same as TOB.

Photo 16. Riparian/fresh emergent wetland complex (W206-3, 208-3) dominated by *Salix* sp.

Photo 17. Upland (U206-3, 209-3) adjacent to riparian/fresh emergent wetland complex.

Photo 18. Perennial stream (D01-3, 01-3) in riparian/fresh emergent wetland complex.

Photo 19. Riparian/fresh emergent wetland complex (W01-3, 02-3) dominated by *Carex* sp.

Photo 20. Upland (U01-3, 03-3) adjacent to riparian/fresh emergent wetland complex.

Photo 21. Fresh emergent wetland (W02-3, 04-3) dominated by *Carex* sp.

Photo 22. Upland (U02-3, 05-3) adjacent to fresh emergent wetland.

Photo 23. Riparian/fresh emergent wetland complex (W11-3x, 38-3x) dominated by *Salix* sp.

Photo 24. Upland (U11-3x, 39-3x) adjacent to riparian/fresh emergent wetland complex.

Photo 25. Riparian wetland (W12-3x, 41-3x) dominated by *Salix* sp.

Photo 26. Upland (U12-3x, 42-3x) adjacent to riparian wetland.

Photo 27. Pond (W110-2, 114-2) dominated by *Carex* sp.

Photo 28. Irrigation canal (D05-3, 13-3) with TOB the same as OHWM.

Photo 29. Perennial stream (D02-3, 01-3) adjacent to Hwy 395 in perennial grassland.

Photo 30. Pond (D24-3x, 51-3x) in seasonal wetland.

Photo 31. Seasonal wetland (W15-3x, 45-3x) dominated by *Carex* sp.

Photo 32. Upland (U15-3x, 46-3x) adjacent to seasonal wetland.

Photo 33. Fresh emergent wetland (W14-3, 07-3) dominated by *Carex* sp.

Photo 34. Upland (U14-3, 08-3) adjacent to fresh emergent wetland.

Photo 35. Pond (D22-3x) in seasonal wetland.

Photo 36. Seasonal wetland (W14-3x, 43-3x) dominated by *Carex* sp.

<p>Photo 37. Upland (U14-3x,44-3x) adjacent to seasonal wetland.</p>	<p>Photo 38. Pond (D23-3x, 47-3x) adjacent to riparian wetland.</p>
<p>Photo 39. Riparian wetland (W16-3x, 48-3x) generally follows bottom of berm and pond water's edge.</p>	<p>Photo 40. Upland (U16-3x, 49-3x) adjacent to riparian wetland.</p>
<p>Photo 41. Irrigation canal (D03-3, 09-3) adjacent to Hwy 395 in perennial grassland.</p>	<p>Photo 42. Fresh emergent wetland (W19-3, 11-3) dominated by grasses.</p>

Photo 43. Upland (U19-3, 12-3) adjacent to fresh emergent wetland.

Photo 44. Perennial stream (D004a-3, 10-3) with TOB the same as OHWM.

Photo 45. Irrigation canal (D105-3, 107-3) adjacent to Hwy 395 in perennial grassland.

Photo 46. Fresh emergent wetland (W100-3, 104-3) dominated by *Carex* sp.

Photo 47. Upland (U100-3, 105-3) adjacent to fresh emergent wetland.

Photo 48. Perennial stream (D104-3, 106-3) adjacent to Hwy 395 in perennial grassland.

Photo 49. Intermittent stream (D103-3, 103-3) with TOB the same as OHWM.

Photo 50. Ephemeral stream (D102-3, 102-3) adjacent to Hwy 395 in perennial grassland.

<p>Photo 51. Perennial stream (D100-3, 100-3) adjacent to Hwy 395 in perennial grassland.</p>	<p>Photo 52. Ephemeral stream (D101-3, 101-3) adjacent to Hwy 395 in perennial grassland.</p>
<p>Photo 53. Upland adjacent to (U5-3x, 27-3x) adjacent to fresh emergent wetland.</p>	<p>Photo 54. Fresh emergent wetland (W05-3x, 26-3x) dominated <i>Typha</i> sp.</p>
	<p>No Photograph</p>
<p>Photo 55. Perennial stream (D204-3, 204-3) adjacent to Hwy 395 in perennial grassland and woodland.</p>	

## Segment 4

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
<p>Photo 1. Ephemeral stream (D01-4, 02-4) with TOB the same as OHWM.</p>	<p>Photo 2. NW1-4, 01-4 (NW1-4, 01-4) suspect area, confirmed upland.</p>
	
<p>Photo. 3. Intermittent stream (D09-4, 13-4) adjacent to Hwy 396 in sagebrush.</p>	<p>Photo. 4. Vegetated ditch (D302-4, 302-4) adjacent to Hwy 396 in perennial grassland.</p>

Photo 5. Riparian wetland (W17-4x, 52-4x) dominated by *Salix* sp.

Photo 6. Upland (U17-4x, 53-4x) adjacent to riparian wetland.

Photo 7. Intermittent stream (D08-4) adjacent to Hwy 395 in sagebrush.

Photo 8. Fresh emergent wetland (W19-4x, 54-4x) dominated by *Carex* sp.

Photo 9. Upland (U19-4x, 55-4x) adjacent to fresh emergent wetland.

Photo 10. Irrigation canal (D07-4, 11-4) adjacent to Hwy 395 in riparian/fresh emergent wetland complex.

Photo 11. Fresh emergent wetland (W20-4x, 56-4x) dominated by *Carex* sp.

Photo 12. Upland (U20-4x, 57-4x) adjacent to fresh emergent wetland.

Photo 13. Irrigation canal (D06-4, 11-4) adjacent to Hwy 395 in riparian/fresh emergent wetland complex.

Photo 14. Riparian/fresh emergent wetland complex (W03-4, 09-40 dominated by *Typha* sp.).

Photo 15. Upland (U03-4, 10-4) adjacent to riparian/fresh emergent wetland complex.

Photo 16. Perennial stream (D05-4, 08-4) adjacent to Hwy 395 in perennial grassland.

Photo 17. Riparian wetland (W23-4x, 58-4x) dominated by *Salix* sp.

Photo 18. Upland (U23-4x, 59-4x) adjacent to riparian wetland.

Photo 19. Intermittent stream (D04-4, 07-4) adjacent to Hwy 395 in riparian/fresh emergent wetland complex.

Photo 20. Perennial stream (D03-4, 06-4) adjacent to Hwy 395 in fresh emergent wetland.

Photo 21. Seasonal wetland (W027-4x, 60-4x) dominated by *Carex* sp.

Photo 22. Upland (U27-4x, 61-4x) adjacent to seasonal wetland.

Photo 23. Riparian wetland (W29-4x, 62-4x) dominated by *Alnus* sp.

Photo 24. Upland (U29-4x, 63-4x) adjacent to riparian wetland.

Photo 25. Fresh emergent wetland (W01-4, 04-4) dominated by *Carex* sp.

Photo 26. Upland (U01-4, 05-4) adjacent to fresh emergent wetland.

Photo 27. Seasonal wetland (W30-4x, 64-4x) dominated by *Carex* sp.

Photo 28. Upland (U30-4x, 65-4x) adjacent to seasonal wetland.

Photo 29. Irrigation canal (D02-4, 03-4) adjacent to Hwy 395 in agriculture land.

Photo 30. Non-vegetated ditch (D01-4x, 66-4x) adjacent to Hwy 395 in agriculture land.

	
<p>Photo 31. Seasonal wetland (W33-4x, 67-4x) dominated by <i>Carex</i> sp.</p>	<p>Photo 32. Upland (U33-4x, 68-4x) adjacent to seasonal wetland.</p>
	
<p>Photo 33. Perennial stream (D100-4, 100-4) adjacent to Hwy 395 in riparian habitat.</p>	<p>Photo 34. Ephemeral stream (D301-4, 301-4) adjacent to Hwy 395 in sagebrush.</p>

	
<p>Photo 35. Ephemeral stream (D300-4, 300-4) adjacent to Hwy 395 in sagebrush.</p>	<p>Photo 36. Wetland swale (W34-4x, 69-4x) dominated by <i>Carex</i> sp.</p>
	
<p>Photo 37. Upland (U34-4x, 70-4x) adjacent to wetland swale.</p>	<p>Photo 38. Perennial stream (D213-4, 219-4) in riparian wetland.</p>

	
<p>Photo 39. Riparian wetland (W35-4x, 71-4x) dominated by <i>Carex</i> sp.</p>	<p>Photo 40. Upland (U35-4x, 72-4x) adjacent to riparian wetland.</p>
	
<p>Photo 41. Intermittent stream (D212-4, 218-4) adjacent to Hwy 395 in woodland.</p>	<p>Photo 42. Seasonal wetland (W37-4x, 73-4x) dominated by <i>Carex</i> sp.</p>

Photo 43. Upland (U37-4x, 74-4x) adjacent to seasonal wetland.

Photo 44. Fresh emergent wetland (W38-4x, 75-4x) dominated by *Carex* sp.

Photo 45. Upland (U38-4x, 76-4x) adjacent to fresh emergent wetland.

Photo 46. Ephemeral stream (D211-4, 217-4) adjacent to Hwy 395 in perennial grassland.

Photo 47. Riparian wetland (W203-4, 215-4) dominated by *Carex* sp.

Photo 48. Upland (U203-4, 216-4) adjacent to riparian wetland.

Photo 49. Seasonal wetland (W41-4x, 77-4x) dominated by *Carex* sp.

Photo 50. Upland (U41-4x, 78-4x) adjacent to seasonal wetland.

Photo 51. Ephemeral stream (D209-4, 213-4) adjacent to Hwy 395 in perennial grassland.

Photo 52. Ephemeral stream (D209-4, 214-4) with TOB the same as OHWM.

Photo 53. Seasonal wetland (W42-4x, 79-4x) dominated by *Carex* sp.

Photo 54. Upland (U42-4x, 80-4x) adjacent to seasonal wetland.

Photo 55. Intermittent stream (D206-4, 210-4) adjacent to Hwy 395 in woodland.

Photo 56. Ephemeral stream (D208-4, 212-4) with TOB the same as OHWM.

Photo 57. Ephemeral stream (D207-4, 211-4) with TOB the same as OHWM.

Photo 58. Intermittent stream (D206-4, 210-4) adjacent to Hwy 395 in woodland.

Photo 59. Ephemeral stream (D205, 209-4) with TOB the same as OHWM.

Photo 60. Fresh emergent wetland (W201-4, 207-4) dominated by *Carex* sp.

Photo 61. Upland (U201-4, 208-4) adjacent to fresh emergent wetland.

Photo 62. Seasonal wetland (W44-4x, 81-4x) dominated by *Carex* sp.

Photo 63. Upland (U44-4x, 82-4x) adjacent to seasonal wetland.

Photo 64. Ephemeral stream (D204-4, 206-4) adjacent to Hwy 395 in perennial grassland.

Photo 65. Ephemeral stream (D203-4, 205-4) adjacent to Hwy 395 in perennial grassland.

Photo 66. Ephemeral stream (D202-4, 204-4) with TOB the same as OHWM.

Photo 67. Ephemeral stream (D100-4x, 83-4x) adjacent to Hwy 395 in sagebrush.

Photo 68. Fresh emergent wetland (W200-4, 202-4) dominated by *Carex* sp.

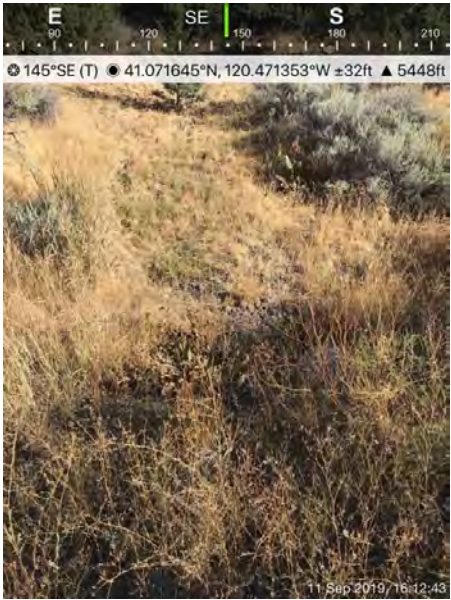

Photo 69. Upland (U200-4, 203-4) adjacent to fresh emergent wetland.

Photo 70. Ephemeral stream (D201-4, 201-4) adjacent to Hwy 395 in sagebrush.

	<p>No Photograph</p>
<p>Photo 71. Ephemeral stream (D200-4, 200-4) with TOB the same as OHWM.</p>	

## Segment 5

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
<p>Photo 1. Riparian wetland (W500-5, 550-5) dominated by <i>Carex</i> sp.</p>	<p>Photo 2. Upland (U500-5, 501-5) adjacent to riparian wetland.</p>
	
<p>Photo 3. Perennial stream (D500-5, 502-5) adjacent to Hwy 396 in riparian wetland.</p>	<p>Photo 4. Fresh emergent wetland (W202-5, 204-5) dominated by <i>Carex</i> sp.</p>

	
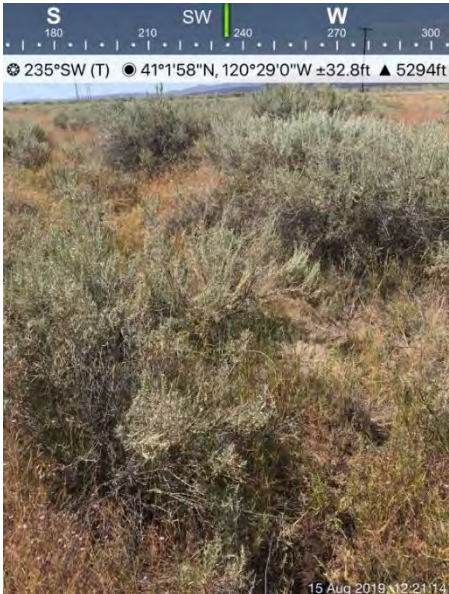

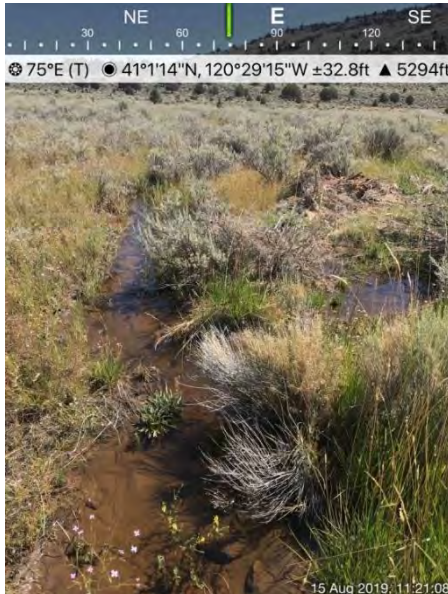

<p>Photo 5. Upland (U202-5, 205-5) adjacent to fresh emergent wetland.</p>	<p>Photo 6. Non-vegetated ditch (D200-5, 203-5) adjacent to Hwy 395 in sagebrush.</p>
	
<p>Photo 7. Fresh emergent wetland (W50-5, 50-5) dominated by <i>Carex</i> sp.</p>	<p>Photo 8. Upland (U50-5, 51-5) adjacent to fresh emergent wetland.</p>

Photo 9. Seasonal wetland (W200-5, 201-5) dominated by *Carex* sp.

Photo 10. Upland (U200-5, 202-5) adjacent to seasonal wetland.

Photo 11. Seasonal wetland (W4-5x, 1-5x) dominated by *Carex* sp.

Photo 12. Upland (U4-5x, 2-5x) adjacent to seasonal wetland.

Photo 13. Irrigation canal (D51-5x, 3-5x) adjacent to Hwy 395 in perennial grassland.

Photo 14. Non-wetland (NW200-5, 200-5) suspect area, confirmed upland.

Photo 15. Seasonal wetland (W5-5x, 4-5x) dominated by *Carex* sp.

Photo 16. Upland (U5-5x, 5-5x) adjacent to seasonal wetland.

Photo 17. Non-wetland (NW01-5x, 06-5x) suspect area, confirmed upland.

Photo 18. Ephemeral stream (D100-5, 100-5) adjacent to Hwy 395 in perennial grassland.

## Segment 6

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
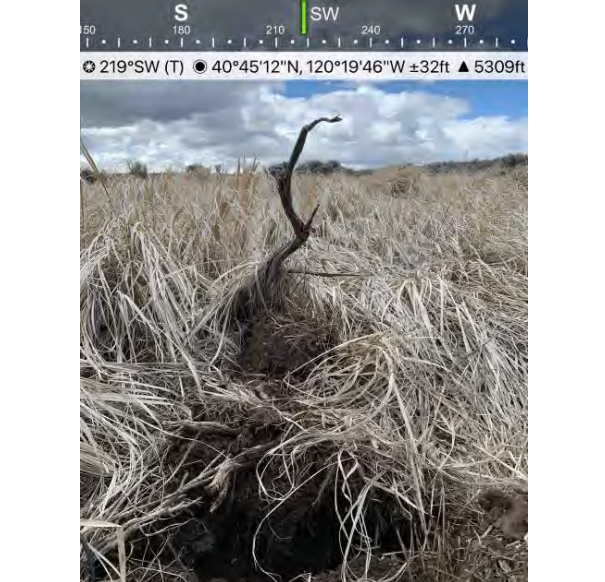

<p>Photo 1. Non-vegetated ditch (D101-6, 101-6) showing break in bank slope and change in vegetation cover with some upland vegetation occurring below the OHWM.</p>	<p>Photo 2. Ephemeral stream (D100-6, 100-6) showing break in bank slope and change in sediment indicating the OHWM.</p>
	
<p>Photo 3. Intermittent stream (D01-6x, 03-6x) with standing water and break in slope and change in vegetation cover indicating the OHWM.</p>	<p>Photo 4. Fresh emergent wetland (W01-6x, 01-6x) dominated by <i>Phalaris</i> sp.</p>

Photo 5. Upland (U01-6x, 02-6x) near *phalaris* sp. wetland, close to the Hwy 395 road slope.

Photo 6. Ephemeral stream (D02-6x, 04-6x) with standing water and break in slope and change in vegetation cover indicating the OHWM.

Photo 7. Seasonal wetland (W200-6, 201-6) in perennial grassland.

Photo 8. Upland (U200-6, 2020-6) with minimal vegetation in rocky area.

Photo 9. Seasonal wetland (W02-6x, 05-6x) dominated by *juncus* sp. with areas of open ground.

Photo 10. Upland (U02-6x, 06-6x) dominated by annual grasses.

Photo 11. Non-wetland (NW01-6x, 07-6x) suspicious area with standing water confirmed as upland.

Photo 12. Ephemeral stream (D03-6x, 08-6x) with standing water and break in slope, change in sediment, and change in vegetation cover as OHWM indicators.

<p>Photo 13. Seasonal wetland (W03-6x, 09-6x) dominated by <i>Phalaris</i> sp.</p>	<p>Photo 14. Upland (U03-6x, 10-6x) dominated by annual grasses.</p>
<p>Photo 15. Seasonal wetland (W05-6x, 11-6x) with standing water and sufficient patches of hydrophytic vegetation.</p>	<p>Photo 16. Upland (U05-6x, 12-6x) with rocky outcrops and patches of annual grasses.</p>

Photo 17. Ephemeral stream (D50-6xb, 12-6x) with standing water.

Photo 18. Ephemeral stream (50-6, 50) with break in bank slope indicating the OHWM.

Photo 19. Wetland swale (W6-6, 15-6) dominated by hydrophytic grass species.

Photo 20. Upland (U6-6, 16-6) dominated by annual grasses and *artemisia* sp.

Photo 21. Wetland seep/spring (W06-6x, 13-6x) with *Typha* sp. and standing water.

Photo 22. Upland (U06-6x, 14-6x) in rocky slope with some upland vegetation.

Photo 23. Intermittent stream (D200-6, 200-6) with break in bank slope and TOB the same as OHWM.

Photo 24. Fresh emergent wetland (W5-6, 13-6) with some *Typha* sp. becoming established.

Photo 25. Upland (U5-6, 14-6) dominated by annual grasses.

Photo 26. Perennial stream (D05-6x, 15-6x) showing break in slope indicating the OHWM and with surface water present.

Photo 27. Ephemeral stream (D06-6x, 16-6x) with break in bank slope indicating the OHWM, water present, and TOB the same as OHWM.

Photo 28. Wetland swale (W50-6x, 50-6x) with *juncus* sp. and ponded surface water.

	<p>No Photograph</p>
<p>Photo 29. Upland (U50-6x, 51-6x) dominated by annual grasses.</p>	

## Segment 7

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

Photo 1. Non-vegetated ditch (D11-7, 21-7) adjacent to Hwy 395 in perennial grassland.

Photo 2. Perennial stream (D4-7, 10) adjacent to Hwy 395 in sagebrush.

Photo 3. Riparian wetland (W4-7, 11-7) dominated by *Salix* sp.

Photo 4. Upland (U4-7, 12-7) adjacent to riparian wetland.

Photo 5. Seasonal wetland (W8-7, 17-7) dominated by *Carex* sp.

Photo 6. Upland (U8-7, 18-7) adjacent to seasonal wetland.

Photo 7. Perennial stream (D3-7, 9-7) adjacent to Hwy 395 in perennial grassland.

Photo 8. Intermittent stream (D2-7, 8-7) in seasonal wetland.

Photo 9. Intermittent stream (D50-7x, 50-7x) adjacent to Hwy 395 in perennial grassland.

Photo 10. Seasonal wetland (W3-7, 6-7) dominated by *Carex* sp.

Photo 11. Upland (U3-7, 7-7) adjacent to seasonal wetland.

Photo 12. Non-vegetated ditch (D10-7) adjacent to Hwy 395 in sagebrush.

Photo 13. Ephemeral stream (D51-7x, 51-7x) adjacent to Hwy 395 in perennial grassland.

Photo 14. Riparian wetland (W2-7, 4-7) dominated by *Salix* sp.

Photo 15. Upland (U2-7, 5-7) adjacent to riparian wetland.

Photo 16. Fresh emergent wetland (W1-7, 2-7) dominated by *Schoenoplectus acutus*.

Photo 17. Upland (U1-7, 3-7) adjacent to fresh emergent wetland.

Photo 18. Perennial stream (D1, 1) adjacent to fresh emergent wetland.

Photo 19. Perennial stream (D1-7Bx, 1-7) adjacent to riparian wetland.

Photo 20. Ephemeral stream (D01-7, 01-7) with TOB the same as OHWM.

Photo 21. Intermittent stream (D100-7x, 100-7x) adjacent to Hwy 395 in sagebrush.

Photo 22. Intermittent stream (D03-07, 01-7) adjacent to Hwy 395 in sagebrush.

Photo 23. Ephemeral stream (D102-7x, 101-7x) adjacent to Hwy 395 in sagebrush.

Photo 24. Seasonal wetland (W01-7, 02-7) dominated by *Carex* sp.

Photo 25. Upland (U01-7, 03-7) adjacent to seasonal wetland.

Photo 26. Ephemeral stream (D104-7x, 103-7x) adjacent to Hwy 395 in sagebrush.

Photo 27. Ephemeral stream (D205-7, 205-7) adjacent to Hwy 395 in perennial grassland.

Photo 28. Ephemeral stream (D204-7, 204-7) with TOB the same as OHWM.

Photo 29. Ephemeral stream (D203-7, 203-7) with TOB the same as OHWM.

Photo 30. Ephemeral stream (D201-7, 201-7) adjacent to Hwy 395 in perennial grassland.

Photo 31. Ephemeral stream (D202-7, 202-7) adjacent to Hwy 395 in perennial grassland.

Photo 32. Ephemeral stream (D103-7x, 102-7x) with TOB the same as OHWM.

## Segment 8

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
<p>Photo 1. Intermittent stream (D102-8, 105-8) with TOB the same as OHWM.</p>	<p>Photo 2. Intermittent stream (D201-8, 201-8) adjacent to Hwy 395 in sagebrush.</p>
	
<p>Photo 3. Riparian wetland (W102-8, 103-8) dominated by <i>Salix</i> sp.</p>	<p>Photo 4. Upland (U101-8, 104-8) adjacent to riparian wetland.</p>

Photo 5. Perennial stream (D101-8, 105-8) adjacent to Hwy 395 in riparian wetland.

Photo 6. Non-wetland (NW50-8x, 50-8x) suspect area, confirmed upland.

Photo 7. Riparian wetland (W100-8, 100-8) dominated by *Typha* sp.

Photo 8. Upland (U100-8, 101-8) adjacent to riparian wetland.

Photo 9. Perennial stream (D100-8, 102-8) adjacent to Hwy 395 in riparian wetland.

Photo 10. Non-wetland (NW1-8x, 1-8x) suspect area, confirmed upland.

Photo 11. Irrigation canal (D103-8, 107-8) adjacent to Standish Buntingville Rd in perennial grassland.

Photo 12. Intermittent stream (D104-8, 108-8) adjacent to Standish Buntingville Rd in riparian habitat.

Photo 13. Irrigation canal (D105-8, 109-8) adjacent to Standish Buntingville Rd in perennial grassland.

Photo 14. Non-vegetated ditch (D1-8x, 2-8x) adjacent to Standish Buntingville Rd in agriculture land.

Photo 15. Seasonal wetland (W103-8, 110-8) dominated by *Lepidium latifolium*.

Photo 16. Upland (U103-8, 111-8) adjacent to seasonal wetland.

Photo 17. Intermittent stream (D108-8, 116-8) adjacent to Standish Buntingville Rd in perennial grassland.

Photo 18. Perennial stream (D107-8, 115-8) adjacent to Standish Buntingville Rd in perennial grassland.

Photo 19. Seasonal wetland (W5-8x, 3-8x) dominated by *Carex* sp.

Photo 20. Upland (U5-8x, 4-8x) adjacent to seasonal wetland.

Photo 21. Fresh emergent wetland (W105-8, 113-8) dominated by *Carex* sp. and hydrophytic grasses.

Photo 22. Upland (U105-8, 114-8) adjacent to fresh emergent wetland.

Photo 23. Intermittent stream (D106-8, 112-8) adjacent to Standish Buntingville Rd in woodland.

Photo 24. Non-wetland (NW200-8, 202-8) suspect area, confirmed upland.

Photo 25. Ephemeral stream (D202-8, 203-8) adjacent to Hwy 395 in perennial grassland.

Photo 26. Intermittent stream (D200-8, 200-8) adjacent to Hwy 395 in riparian wetland.

Photo 27. Riparian wetland (W01-1, 01-1) dominated by *Salix* sp.

Photo 28. Upland (U01-8, 02-8) adjacent to riparian wetland.

	
<p>Photo 29. Riparian wetland (W6-8x, 5-8x) dominated by <i>Salix</i> sp.</p>	<p>Photo 30. Upland (U6-8x, 6-8x) adjacent to riparian wetland.</p>
	
<p>Photo 31. Intermittent stream (D2-8x, 7-8x) adjacent to Hwy 395 in woodland and perennial grassland.</p>	<p>Photo 32. Riparian wetland (W8-8x, 8-8x) dominated by <i>Salix</i> sp.</p>
	<p>No Photograph</p>
<p>Photo. 33. Upland (U8-8x, 9-8x) adjacent to riparian wetland.</p>	

## Segment 9

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
<p>Photo 1. Intermittent stream (D007-9, 007-9) adjacent to Hwy 395 in <i>Salix</i> sp. riparian habitat.</p>	<p>Photo 2. Non-wetland (NW1-9x, 1-9x) suspect area, confirmed upland.</p>
	
<p>Photo 3. Non-wetland (NW2-9x, 2-9x) suspect area, confirmed upland.</p>	<p>Photo 4. Intermittent stream (D006-9, 006-9) adjacent to Hwy 395 in sagebrush.</p>

Photo 5. Ephemeral stream (D005-9, 005-9) adjacent to Hwy 395 in sagebrush.

Photo 6. Ephemeral stream (D01-9x, 03-9x) adjacent to Hwy 395 in sagebrush.

Photo 7. Ephemeral stream (D004-9, 004-9) adjacent to Hwy 395 in perennial grassland and conifer woodland.

Photo 8. Ephemeral stream (D003-9, 003-9) with TOB the same as OHWM.

Photo 9. Intermittent stream (D002-9, 002-9) adjacent to Hwy 395 in woodland.

Photo 10. Seasonal wetland (W100-9x, 100-9x) dominated by *Schoenoplectus acutus*.

Photo 11. Upland (U100-9x, 101-9x) adjacent to seasonal wetland.

Photo 12. Ephemeral stream (D001-9, 001-9) adjacent to Hwy 395 in woodland.

Photo 13. Ephemeral stream (D013-9, 15-9) adjacent to Hwy 395 in woodland.

Photo 14. Ephemeral stream (D012-9, 14-9) adjacent to Hwy 395 in perennial grassland.

Photo 15. Ephemeral stream (D011-9, 13-9) adjacent to Hwy 395 in woodland.

Photo 16. Ephemeral stream (D02-9x, 4-9x) adjacent to Hwy 395 in perennial grassland and sagebrush.

Photo 17. Fresh emergent wetland (W001-9, 011-9) dominated by *Carex* sp.

Photo 18. Upland (U001-9,012-9) adjacent to fresh emergent wetland.

Photo 19. Ephemeral stream (D010-9, 010-9) with TOB the same as OHWM.

Photo 20. Ephemeral stream (D009-9, 009-9) adjacent to Hwy 395 in woodland.

Photo 21. Irrigation canal (D008-9, 008-9) adjacent to Hwy 395 in woodland.

Photo 22. Intermittent stream (D03-9x, 5-9x) adjacent to Hwy 395 in *Salix* sp. riparian habitat.

## Segment 10

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
<p>Photo 1. Perennial stream (D08-10, 14-10) with TOB the same as OHWM.</p>	<p>Photo 2. Intermittent stream (D07-10, 13-10) with TOB the same as OHWM.</p>
	
<p>Photo 3. Riparian/fresh emergent wetland complex (W01-10x, 01-10x) dominated by <i>Salix</i> sp.</p>	<p>Photo 4. Upland (U01-10x, 02-10x) adjacent to riparian/fresh emergent wetland complex.</p>

Photo 5. Riparian/fresh emergent wetland complex (W02-10x, 03-10x) dominated by *Salix* sp.

Photo 6. Upland (U02-10x, 04-10x) adjacent to riparian/fresh emergent wetland complex.

Photo 7. Ephemeral stream (D01-10x, 05-10x) with TOB the same as OHWM.

Photo 8. Perennial stream (D06-10, 12-10) adjacent to highway 395 in *Salix* sp. riparian habitat.

Photo 9. Non-wetland (NW01-10x, 06-10x) suspect area, confirmed to be upland.

Photo 10. Fresh emergent wetland (W03-10x, 0710x) dominated by *Salix* sp.

Photo 11. Upland (U03-10x, 08-10x) adjacent to fresh emergent wetland.

Photo 12. Wetland swale (W05-10, 09-10) dominated by *Salix* sp.

Photo 13. Upland (U05-10, 10-10) adjacent to wetland swale.

Photo 14. Perennial stream (D05-10, 11-10) with TOB the same as OHWM.

	
<p>Photo 15. Ephemeral stream (D2-10x, 9-10x) adjacent to Hwy 395 in perennial grassland with rocky slopes.</p>	<p>Photo 16. Intermittent stream (D203-10, 205-10) adjacent to Hwy 395 in perennial grassland.</p>
	
<p>Photo 17. Ephemeral stream (D202-10, 204-10) adjacent to Hwy 395 in sagebrush.</p>	<p>Photo 18. Ephemeral stream (D04-10, 08-10) adjacent to Hwy 395 in perennial grassland.</p>

Photo 19. Fresh emergent wetland (W04-10, 06-10) with *Carex* sp. and *Rumex* sp.

Photo 20. Upland (U04-10, 07-10) adjacent to fresh emergent wetland.

Photo 21. Ephemeral stream (D03-10, 05-10) in fresh emergent wetland.

Photo 22. Ephemeral stream (D03-10, 05-10) adjacent to HWY 395 in sagebrush and perennial grassland.

Photo 23. Ephemeral stream (D02-10, 04-10) adjacent to HWY 395 in perennial grassland.

Photo 24. Non-wetland (NW100-10, 100-10) suspect area, confirmed upland.

Photo 25. Seasonal wetland (W4-10x, 10-10x) dominated by *Salix* sp.

Photo 26. Upland (U4-10x, 11-10x) adjacent to seasonal wetland.

Photo 27. Fresh emergent wetland (W01-10, 02-10) dominated by *Carex* sp. and *Polypogon monspeliensis*.

Photo 28. Upland (U01-10, 03-10) adjacent to fresh emergent wetland.

Photo 29. Fresh emergent wetland (W05-10x, 12-10x) dominated by *Typha* sp.

Photo 30. Upland (U05-10x, 13-10x) adjacent to fresh emergent wetland.

Photo 31. Ephemeral stream (D01-10, 01-10) adjacent to Hwy 395 in sagebrush.

Photo 32. Ephemeral stream (D201-10, 203-10) adjacent to Hwy 395 in sagebrush.

Photo. 33. Perennial stream (D105-10, 106-10) adjacent to Hwy 395 in riparian wetland.

Photo. 34. Perennial stream (D104-10, 107-10) adjacent to Hwy 395 in riparian wetland.

Photo 35. Riparian wetland (W6-10x, 14-10x) dominated by *Salix* sp.

Photo 36. Upland (U6-10x, 15-10x) adjacent to riparian wetland.

Photo 37. Ephemeral stream (D103-10, 106-10) adjacent to Hwy 395 in perennial grassland.

Photo 38. Non-wetland (NW2-10x, 16-10x) suspect area, confirmed to be upland.

Photo 39. Perennial stream (D102-10, 105-10) adjacent to Hwy 395 in sagebrush.

Photo 40. Riparian wetland (W100-10, 103-10) dominated by *Salix* sp.

Photo 41. Upland (U100-10, 104-10) adjacent to riparian wetland.

Photo 42. Perennial stream (D101-10, 102-10) adjacent to Hwy 395 in riparian wetland.

Photo 43. Ephemeral stream (D3-10x, 17-10x) adjacent to Hwy 395 in sagebrush.

Photo 44. Ephemeral stream (D200-10, 202-10) adjacent to Hwy 395 in sagebrush and perennial grassland.

Photo 45. Intermittent stream (D100-10, 101-10) adjacent to Hwy 395 in sagebrush.

Photo 46. Intermittent stream (D200-10, 202-10) adjacent to Hwy 395 in sagebrush.

Photo 47. Riparian wetland (W200-10, 200-10) dominated by *Carex* sp.

Photo 48. Upland (U200-10, 200-10) adjacent to riparian wetland.

Photo 49. Non-wetland (NW3-10x, 18-10x) suspect area, confirmed upland.

Photo 50. Ephemeral stream (D4-10x, 21-10x) adjacent to Hwy 395 in sagebrush.

	
<p>Photo 51. Riparian/fresh emergent wetland complex (W09-10x, 19-10x) dominated by <i>Salix</i> sp.</p>	<p>Photo 52. Upland (U09-10x, 20-10x) adjacent to riparian/fresh emergent wetland complex.</p>
	
<p>Photo 53. Seasonal wetland (W11-10x, 22-10x) dominated by <i>Carex</i> sp.</p>	<p>Photo 54. Upland (U11-10x, 23-10x) adjacent to seasonal wetland.</p>

<p>Photo 55. Riparian wetland (W12-10x, 24-10x) dominated by <i>Salix</i> sp.</p>	<p>Photo 56. Upland (U12-10x, 25-10x) adjacent to riparian wetland.</p>
<p>Photo 57. Perennial stream (D107-10, 111-10) adjacent to Hwy 395 in riparian wetland.</p>	<p>Photo 58. Riparian wetland (W105-10, 112-10) dominated by <i>Carex</i> sp.</p>

Photo 59. Upland (U105-10, 113-10) adjacent to riparian wetland.

Photo 60. Riparian/fresh emergent wetland complex (W106-10, 114-10) dominated by *Carex* sp. and *Juncus* sp.

Photo 61. Upland (U106-10, 115-10) adjacent to riparian/fresh emergent wetland complex.

Photo 62. Perennial stream (D106-10, 110-10) adjacent to HWY 395 in sagebrush.

	
<p>Photo 63. Riparian/fresh emergent wetland complex (W10W103-10, 108-10) dominated by <i>Carex</i> sp. and <i>Salix</i> sp.</p>	<p>Photo 64. Upland (U103-10, 109-10) adjacent to riparian/fresh emergent wetland complex.</p>

## Segment 11

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
Photo 1. Fresh emergent wetland (W01-11x, 01-11x) in sagebrush.	Photo 2. Upland (U01-11x, 02-11x) adjacent to fresh emergent wetland.
	
Photo 3. Non-wetland (NW01-11, 07-11) suspect area, confirmed to be upland.	Photo 4. Non-wetland (NW01-11x, 03-11x) suspect area, confirmed to be upland.

Photo 5. Perennial stream (D04-11, 06-11) in perennial grassland and sagebrush.

Photo 6. Fresh emergent wetland (W02-11x, 04-11x) in perennial grassland and sagebrush.

Photo 7. Upland (U02-11x, 05-11x) adjacent to fresh emergent wetland.

Photo 8. Irrigation canal (D03-11, 03-11) adjacent to highway 395 in perennial grassland.

Photo 9. Fresh emergent wetland (W01-11, 04-11) dominated by *Schoenoplectus acutus*.

Photo 10. Upland (U01-11, 05-11) adjacent to fresh emergent wetland.

Photo 11. Intermittent stream (D02-11, 02-11) adjacent to highway 395 in riparian wetland.

Photo 12. Riparian wetland (W03-11, 08-11) with *Salix* sp. and *Juncus* sp.

Photo 13. Upland (U03-11, 09-11) adjacent to riparian wetland.

Photo 14. Riparian/fresh emergent wetland complex soil profile (W03-11x, 06-11x), adjacent to highway 395.

Photo 15. Upland (U03-11x, 07-11x) adjacent to riparian/fresh emergent wetland complex.

Photo 16. Ephemeral stream (D100-11x, 100-11x) adjacent to highway 395 in sagebrush.

Photo 17. Fresh emergent wetland (W04-11x, 08-11x) dominated by *Carex* sp.

Photo 18. Upland (U04-11x, 09-11x) adjacent to fresh emergent wetland.

Photo 19. Intermittent stream (D01-11, 01-11) adjacent to Hwy 395 in sagebrush.

Photo 20. Ephemeral stream (D01-11x, 10-11x) adjacent to HWY 395 in perennial grassland.

	
<p>Photo 21. Ephemeral stream (D02-11x, 11-11x) adjacent to HWY 395 in sagebrush.</p> 	
<p>Photo 23. Ephemeral stream (D100-11, 100-11) with TOB the same as OHWM.</p>	<p>Photo 24. Ephemeral stream (D03-11x, 12-11x) adjacent to HWY 395 in sagebrush.</p>

Photo 25. Ephemeral stream (D17-11, 22-11) adjacent to HWY 395 in sagebrush and perennial grassland.

Photo 26. Ephemeral stream (D102-11, 102-11) adjacent to HWY 395 in sagebrush and perennial grassland.

Photo 27. Ephemeral stream (D103-11, 103-11) adjacent to HWY 395 in sagebrush and perennial grassland.

Photo 28. Ephemeral stream (D104-11, 104-11) adjacent to HWY 395 in sagebrush.

Photo 29. Upland (U06-11x, 14-11x) adjacent to fresh emergent wetland.

Photo 30. Vegetated ditch (D15-11, 20-11) adjacent to HWY 395 in sagebrush.

Photo 31. Intermittent stream (D14-11, 19-11) adjacent to HWY 395 in sagebrush.

Photo 32. Ephemeral stream (D04-11x, 15-11x) adjacent to HWY 395 in sagebrush.

Photo 33. Non-wetland (NW2-11x, 16-11x) suspect area, confirmed to be upland.

Photo 34. Vegetated ditch (D13-11, 18-11) adjacent to HWY 395 in sagebrush.

Photo 35. Vegetated ditch (D12-11, 17-11) adjacent to HWY 395 in sagebrush and perennial grassland.

Photo 36. Ephemeral stream (D11-11, 16-11) adjacent to HWY 395 in sagebrush.

Photo 37. Ephemeral stream (D06-11, 11-11) adjacent to HWY 395 in sagebrush and perennial grassland.

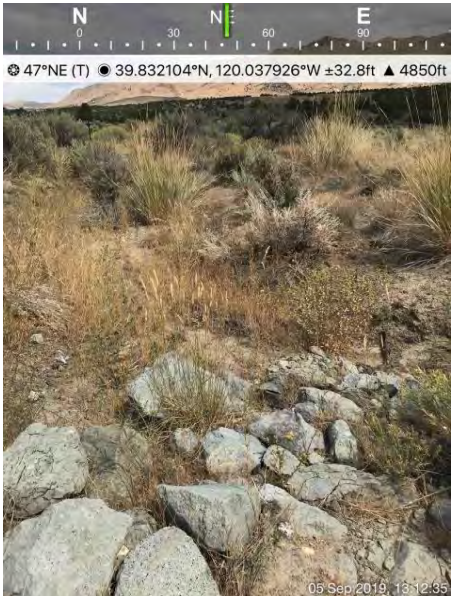

Photo 38. Ephemeral stream (D05-11, 10-11) adjacent to HWY 395 in perennial grassland.

Photo 39. Ephemeral stream (D16-11, 21-11) adjacent to HWY 395 in sagebrush.

Photo 40. Intermittent stream (D10-11, 15-11) adjacent to HWY 395 in sagebrush.

	<p>No Photograph</p>
<p>Photo 41. Ephemeral stream (D08-11, 13-11) adjacent to HWY 395 in sagebrush and perennial grassland.</p>	

## Segment 12

The following photos are documentation of conditions within the study area during the field delineation conducted from August 2019 to May 2020.

	
<p>Photo 1. Non-vegetated ditch (D01-12x, 01-12x) in sagebrush.</p> 	<p>Photo 2. Ephemeral stream (D100-12a, 100-12a) in sagebrush.</p> 
<p>Photo 3. Ephemeral stream (D01-12, 01-12) in perennial grassland.</p>	<p>Photo 4. Ephemeral stream (D02-12, 02-12) in perennial grassland.</p>

Photo 5. Non-vegetated ditch (D03-12, 03-12) in perennial grassland.

Photo 6. Ephemeral stream (D04-12, 04-12) adjacent to highway 395 in sagebrush.

Photo 7. Ephemeral stream (D05-12, 05-12) adjacent to highway 395 in sagebrush and perennial grassland.

Photo 8. Ephemeral stream (D06-12, 06-12) with TOB the same as OHWM.

Photo 9. Ephemeral stream (D07-12, 07-12) adjacent to highway 395 in sagebrush and perennial grassland.

Photo 10. Ephemeral stream (D08-12, 08-12) adjacent to highway 395 in sagebrush.

Photo 11. Ephemeral stream (D09-12, 09-12) adjacent to highway 395 in sagebrush and perennial grassland.

Photo 12. Ephemeral stream (D10-12, 10-12) adjacent to highway 395 in sagebrush and perennial grassland.

Photo 13. Ephemeral stream (D11-12, 11-12) with TOB the same as OHWM.

Photo 14. Ephemeral stream (D12-12, 12-12) adjacent to highway 395 in sagebrush.

Photo 15. Ephemeral stream (D13-12, 13-12) adjacent to highway 395 in sagebrush.

Photo 16. Ephemeral stream (D14-12, 14-12) with TOB the same as OHWM.
