RE: Determination of Completeness, Southern California Edison's Consolidated Applications to Construct the Fogarty/Valley-Ivyglen project.

Dear Mr. Horne:

Southern California Edison Company (SCE) submitted: (1) Application 07-01-031, for a permit to construct the Valley-Ivyglen 115 kV Subtransmission Line project; and (2) Application 07-04-028, for a permit to construct the Fogarty Substation project. In a Ruling dated June 2, 2007, the assigned Administrative Law Judge ruled that the proposed projects, if approved, would involve a single project for the purposes of the Commission's review under the California Environmental Quality Act. The Ruling consolidates the two proceedings in accordance with Rule 7.4 of the Commission's Rules of Practices and Procedures.

The Energy Division has completed its review of SCE's consolidated application to construct the Fogarty Substation/Valley-Ivyglen Subtransmission Line project. With the supplemental data and information provided by SCE, the Energy Division finds that the Application and Proponent's Environmental Assessment contain sufficient information to satisfy the requirements of the Commission's Information and Criteria List and can now be deemed complete. Please note that this determination has been made with the understanding that the Energy Division may request additional data, as necessary, to review and analyze the environmental effects of the proposed project in accordance with requirements of the California Environmental Quality Act.

Please do not hesitate to call me at (415) 703-5484 if you have any questions.

Sincerely,

A handwritten signature in cursive script that reads "Jensen Uchida".
