Question 07-01:

Backfilling material from Structure Removal

Reference: PEA, 3.0 Project Description, Section 3.7

Clarify if backfill material would be stored at the proposed staging areas in addition to the areas identified within the proposed substation boundaries.

Response to Question 07-01:

Where feasible, backfill material will be moved directly from the excavation location to the location requiring backfill. When this is not feasible, backfill material will be stored at one of the three (3) transmission staging yards identified adjacent to Mesa substation.
