Question 19-01:

Vegetation Removal and Planting Areas

Reference: PEA, 4.1 Aesthetics, p.4.1-65

SCE states that it intends to replace the 15-20 foot tall street trees with low ground cover and smaller shrubs. However, KOPs 1 and 4 show street trees along Potrero Grande Drive rather than ground cover and smaller shrubs. Based on this statement, provide revised visual simulations for KOPs 1 and 4 that show this.

Response to Question 19-01:

It is anticipated SCE will submit revised visual simulations which will only display drought-tolerant low ground cover and small shrubs along the street frontage by August 14th. The existing visual simulations displaying the street trees along the street frontage will also remain as an option. SCE will be meeting with the City of Monterey Park in the near future to discuss the landscape options. Once visual simulations are complete, they will be sent directly to E&E by SCE.
