Question 08:

State the estimated dimensions of disturbance around each groundwater monitoring well that would occur during groundwater monitoring well decommissioning.

Response to Question 08:

The estimated disturbance area immediately surrounding each well during decommissioning will likely be confined to an area not more than 1,000 square feet in size.

Note: Because all of the ground water monitoring wells that are proposed for decommissioning are within the footprint of the disturbance area already identified for substation and transmission work, the combined disturbance area for this work does not need to be added to the overall project disturbance area calculations.
