RE: Suncrest Dynamic Reactive Power Support Project

Dear Mr. Wilson,

NextEra Energy Transmission West, LLC (NEET West) will be constructing a new Static Var Compensator (SVC) dynamic reactive device and underground electric transmission line in your neighborhood. The project will include two primary components: an SVC facility, which is similar to a small substation, and an approximately one-mile-long underground electric transmission line connecting the facility to the existing Suncrest Substation, owned and operated by San Diego Gas and Electric Company.

Construction of the new SVC facility will occur within a 6-acre area located approximately 1 mile east of the existing Suncrest Substation along Bell Bluff Truck Trail. The connecting transmission line will be installed underground within and adjacent to Bell Bluff Truck Trail.

Work is scheduled to begin February 2019 and is expected to last over a period of approximately 12 months. During this period, you may see or hear construction activities, including vehicular travel such as trucks and/or vehicles transporting project personnel, equipment, and supplies along Bell Bluff Truck Trail. The construction schedule could be influenced by weather conditions throughout the year. We apologize in advance for any inconvenience this may cause. We will do our utmost to minimize disruptions during this period.

We appreciate your cooperation as we work to improve and maintain the reliability of the electrical transmission system. If you have any questions, concerns, or noise-related concerns regarding the construction activities, please contact me via phone or email during normal business hours.

Respectfully,

David Farkas
Project Manager
