Subject Emissions and Air Quality Modeling Results Associated with the Underground Hybrid I-15
230-kV route of the Riverside Transmission Reliability Project (RTRP); Riverside County,
California

From Eric Carlson, Air Quality Project Manager
Jason Paukovits, Senior Air Quality Engineer
Mary Kaplan, Senior Air Quality Project Specialist

Date November 21, 2016

This technical memorandum summarizes the results of revised emissions estimates and dispersion modeling performed at the request of Southern California Edison (SCE) to incorporate activities associated with the Underground Hybrid I-15 230-kV route of the Riverside Transmission Reliability Project (RTRP). In addition, this letter serves to address Question No. 18 of the California Public Utility Commission (CPUC) "Data Request Set: A.15-04-013 RTRP-CPUC Deficiency Report-SCE-004 Supplemental." To summarize, the question pertains to a CPUC request that updated air quality and greenhouse gas (GHG) emissions modeling be provided for the current Underground Hybrid version of the project using current air quality models and meteorological data, and providing model assumptions to support model output.

REVISED EMISSIONS ESTIMATIONS

The original modeling in the Final Environmental Impact Report (FEIR) was based on EMFAC 2007 and OFFROAD 2007. URBEMIS was not utilized in the FEIR for the air quality analysis. Utilizing as closely as possible the same methodology in the FEIR, updated emission factors (EFs) were obtained from current modeling tools, as follows:

- On-road equipment EFs from EMFAC2014; and
- Off-road equipment EFs and load factors from Appendix D: Default Data Tables of the California Emissions Estimation Model (CalEEMod) User's Guide.

Most air districts, including the South Coast Air Quality Management District (SCAQMD), recommend the use of CalEEMod to estimate emissions from land use development projects. The EFs in CalEEMod are based on the most recent OFFROAD model. However, CalEEMod was not designed for linear construction projects, such as construction of a new roadway or utility lines. Therefore, the use of off-road EFs from CalEEMod, rather than using the actual model, is considered appropriate for the Proposed Project.

The source of the off-road EFs, Appendix D of the CalEEMod User’s Guide, also provided widely used load factors for various equipment types. The respective off-road EF (selected via equipment type and size) was multiplied by the appropriate load factor, resulting in the EFs presented in the emission result tables.

Construction of the Proposed Project is anticipated to take approximately three years to complete, beginning in 2020 at the earliest; for this reason, all emissions were updated based upon a 2020 fleet mix (for both on-road vehicles and off-road vehicles/equipment). The emission estimation spreadsheets were updated to reflect not only the revised EFs, but also several changes consistent with the FEIR and the anticipated project construction start year. Activities associated with the underground portion of the project, off-road equipment quantities, equipment sizes (i.e. horsepower rating), work duration, equipment sizes (i.e. horsepower rating) and usage time were provided by SCE via updates to Table 2.5-1 of the FEIR.

While methane (CH₄) was included in prior inventory work, it is not included in EMFAC2014; for this reason and because its contribution to a calculated carbon dioxide equivalent (CO_{2e}) value was at least several orders of magnitude lower than that of CO₂, methane emissions were excluded from the revised estimates. The updated emissions, from those presented in Table 3.2.3-10 of the FEIR, are provided below, with criteria pollutants presented as Table 1 and GHGs presented in Table 2; these values do not include mitigation. The respective mitigated criteria pollutant and GHG emissions are provided in Tables 3 and 4, respectively. These include mitigation prescribed in the FEIR, including AQ-14 (Restricted Activity Overlap) and AQ-19 (Tier 4 Emissions Standards for All Internal Combustion Engines/Construction Equipment [where available]).

Table 1. Summary of Revised Unmitigated Emissions Estimates/Comparison with Regional CEQA Thresholds

LOCALIZED SIGNIFICANCE THRESHOLDS AND DISPERSION MODELING

AECOM performed the dispersion modeling in general accordance with the South Coast Air Quality Management District (SCAQMD) guidance for localized significance thresholds (SCLST) (acronym modified so as not to be confused with a similar project acronym for lattice steel tower [LST]). The prior analysis was based on the SCLST screening tables and modeling of localized emissions from SCREEN3.

In place of SCLST tables and SCREEN3, air dispersion modeling was conducted to examine maximum short term impacts near the Louis Vandermolten Fundamental Elementary School and surrounding residential housing. The Louis Vandermolten Fundamental Elementary School was chosen for this updated evaluation since it is a sensitive receptor location close to the Underground Hybrid I-15 230-kV

route. From Table 2.5-1 of the FEIR, the estimated work area associated with the Underground Vault Installation activity is approximately 150 feet long and 100 feet wide. Since short term emissions are no more than 24 hours, construction was assumed to occur within an area of these approximate dimensions near the school in this modeling evaluation.

Model Selection

Selection of the appropriate dispersion model for use in the analysis is based on the available meteorological input data, the physical characteristics of the emissions that are to be simulated, the land use designation in the vicinity of the source under consideration, and the complexity of the nearby terrain.

The Environmental Protection Agency (EPA) recommends the use of the American Meteorological Society/EPA Regulatory Model (AERMOD) modeling system for use in modeling multi-source emissions and was used for this analysis. AERMOD can account for plume downwash, stack tip downwash, and point, area, and volume sources. AERMOD also has the ability to simulate impacts at both flat and complex terrain receptors.

The version numbers of the AERMOD model and pre-processors that were used include:

- AERMAP version 11103
- AERMOD version 15181

Meteorological Data

AERMOD-ready hourly meteorological data was obtained from the South Coast Air Quality Management District (SCAQMD). Following guidelines the Riverside Municipal Airport was selected as the meteorological data site to be used for the project. A wind rose for this airport is provided in Figure 1.

Sources

The construction of the underground transmission lines is comprised of the following emission sources:

- Off Road Vehicles (Construction Equipment Tailpipe Emissions)
- Earthmoving Activities (Fugitive Dust)

It is anticipated that construction would occur during standard working hours; therefore, modeling assumed the following operating schedule, conservatively including operation during the lunch hour:

- Weekdays: 6AM – 6PM - all emission sources
- Weekends: No activity

General source set up followed the SCAQMD's *Final Localized Significance Threshold Methodology*.

Volume Sources

It has been assumed that emissions from the off-road vehicles are best characterized by volume sources.

Construction equipment exhaust emissions are treated as a set of 15 adjacent elevated volume sources that cover an area approximately 50 meters long and 30 meters wide (only slightly different than the estimated work area of 150 feet long and 100 feet wide). These sources are illustrated in Figure 2. Each volume source footprint is 30 meters by 30 meters, and the release height is assumed to be 5 meters. This represents the mid-range of the expected plume rise from frequently used construction equipment during daytime atmospheric conditions. As previously stated, all construction exhaust emissions are assumed to take place over the 12-hour period between 6 am and 6 pm.

Area Source

Fugitive dust emissions are treated as a ground-based rectangular area source covering a maximum daily 150 feet long and 100 feet wide construction zone. An initial vertical dimension of one meter is assumed to represent vertical spread of the emissions. As with the construction equipment, all fugitive dust emissions are assumed to take place over the 12-hour period between 6 am and 6 pm. This area source is illustrated in Figure 3.

Receptors

Receptors were placed over areas immediately adjacent to the underground transmission lines and vault (manhole) installations and the Louis Vandermolen Fundamental Elementary School – covering the school and nearby residential housing. This receptor grid contained 25-meter spacing between each receptor. The receptor grid can be seen in Figure 4.

Background Monitoring Data

Recent monitoring data are available from the Mira Loma monitor in Riverside County, CA (summarized in Table 5). This monitor is situated approximately 3.5 miles to the northeast of the Louis Vandermolten Fundamental Elementary School in a suburban setting similar to the Proposed Project and is the most representative background monitor available for the analysis. While the nitrogen dioxide (NO₂) data capture is below what would be required for Federal permitting requirements, the capture percent was deemed adequate for the purposes of this evaluation. Maximum concentrations over the most recently available 3 year period (2012-2014) were taken and summed with the maximum modeled concentrations for comparisons against the construction thresholds.

Table 5: Mira Loma Monitor – Background Concentrations

Monitor	Pollutant	Averaging Period	Year	Annual Data Capture		Maximum Monitor Concentration	Design Concentration (3-year Maximum)	Units
				Hours	%			
Mira Loma (ID: 06-065-8005)	CO	1 Hour	2012	7811	89	2.1	2.8	ppm
			2013	7859	90	2.2		
			2014	7974	91	2.8		
		8 Hour	2012	8227	94	1.9	2.4	
			2013	8296	95	1.8		
			2014	8450	96	2.4		
	NO ₂	1 Hour	2012	6614	75	60.7	60.7	ppb
			2013	7660	87	53.7		
			2014	7933	91	57.7		

Results / Conclusion

Most of the construction of the Proposed Project is within residential/commercial areas in Riverside. As previously stated, the focus of the updated model evaluation was on modeled maximum concentrations on and nearby the Louis Vandermolten Fundamental Elementary School.

Tables 6 and 7 present the respective maximum localized concentrations from a single day of unmitigated and mitigated construction emissions that may potentially impact the school and nearby residences. As Tables 6 and 7 indicate, both mitigated and unmitigated modeled concentrations are below the LST thresholds for CO; however, NO₂ (unmitigated only), PM₁₀ and PM_{2.5} are above LST thresholds.

Table 6: Unmitigated Modeling Results

Single Vault Installation	CO		NO ₂ *	PM ₁₀	PM _{2.5}
	Averaging Time				
	1-Hour	8-Hour	1-Hour	24-Hour	
Maximum Modeled Concentration (µg/m ³)	838.36	272.63	891.96	313.05	68.24

**MODELOPTs: RegDEFAULT CONC ELEV RURAL

*** MODEL SETUP
OPTIONS SUMMARY

- - - - -
- - - - -

**Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F

**Model Uses RURAL Dispersion Only.

**Model Uses Regulatory DEFAULT Options:
1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.

**Other Options Specified:
TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates 1 Short Term Average(s) of: 1-HR

**This Run Includes: 15 Source(s); 1 Source Group(s);
and 1376 Receptor(s)

File: J:\Projects\Southern California Edison - 06200\RTRP\400-Technical\402-Modeling\AERMOD\Short Term_r11_UNMIT\NOx\RTRP_NOx_Shor

with: 0 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 15 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 OPENPIT source(s)

**Model Set To Continue RUNNING After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 14134

**Output Options Selected:

Model Outputs Tables of Highest Short Term Values by
Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for
Plotting (PLOTFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values:
c for Calm Hours

m for Missing Hours

b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =
250.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC
; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.8 MB of
RAM.

File: J:\Projects\Southern California Edison - 06200\RTRP\400-Technical\402-Modeling\AERMOD\Short Term_r11_UNMIT\NOx\RTRP_NOx_Shor

**MODELOPTs: RegDEFAULT CONC ELEV RURAL

*** MODEL SETUP
OPTIONS SUMMARY

**Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F

**Model Uses RURAL Dispersion Only.

**Model Uses Regulatory DEFAULT Options:
1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.

**Other Options Specified:
TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates 1 Short Term Average(s) of: 24-HR

**This Run Includes: 16 Source(s); 3 Source Group(s);
and 1376 Receptor(s)

File: J:\Projects\Southern California Edison - 06200\RTRP\400-Technical\402-Modeling\AERMOD\Short Term_r11_UNMIT\PM10\RTRP_PM10_Sh

with: 0 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 15 VOLUME source(s)
and: 1 AREA type source(s)
and: 0 LINE source(s)
and: 0 OPENPIT source(s)

**Model Set To Continue RUNNING After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 14134

**Output Options Selected:

Model Outputs Tables of Highest Short Term Values by
Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for
Plotting (PLOTFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values:
c for Calm Hours

m for Missing Hours

b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =
250.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC
; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 4.1 MB of
RAM.

**MODELOPTs:  RegDEFAULT CONC      ELEV      RURAL
```

```
***      MODEL SETUP
OPTIONS SUMMARY
***
```

**Model Is Setup For Calculation of Average CONCentration Values.

```
-- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION.  DRYDPLT = F
**Model Uses NO WET DEPLETION.  WETDPLT = F
```

**Model Uses RURAL Dispersion Only.

**Model Uses Regulatory DEFAULT Options:

1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.

**Other Options Specified:
TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates 1 Short Term Average(s) of: 24-HR

**This Run Includes: 16 Source(s); 3 Source Group(s);
and 1376 Receptor(s)

File: J:\Projects\Southern California Edison - 06200\RTRP\400-Technical\402-Modeling\AERMOD\Short Term_r11_UNMIT\PM25\RTRP_PM25_Sh

with: 0 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 15 VOLUME source(s)
and: 1 AREA type source(s)
and: 0 LINE source(s)
and: 0 OPENPIT source(s)

**Model Set To Continue RUNNING After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 14134

**Output Options Selected:

Model Outputs Tables of Highest Short Term Values by
Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for
Plotting (PLOTFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values:
c for Calm Hours

m for Missing Hours

b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) =
250.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC
; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 4.2 MB of
RAM.
