*P3a. Description:

This property comprises a one story, wood-frame outbuilding with a rectangular footprint and front gable roof that is clad in metal. Its exterior is clad in clapboard with a small vent in the apex of the gable end. Window openings are covered with wood and the door at the east façade appears to be a replacement. The property is set at the far edge of the industrial/agricultural section of East Lodi, east of Lodi Cemetery. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

Section B10. Significance (continued)

Historic Context

The property at 1560 East Pine Street is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

1560 East Pine Street

CONTINUATION SHEET

Property Name: 1560 East Pine Street (Resource ID 13)

Page 4 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 1560 East Pine Street is currently owned by Richard S. Galtine and is used as part of a landscaping business. Tax assessor records show the last deed transaction of the property dating to October 5, 2015. A 1911 county atlas shows the property was part of a cluster of small parcels, likely for sale, with no owner indicated (historicmapworks.com 2023). The earliest aerial photograph for the area dates from 1957 and shows the area surrounding the property as agricultural with some scattered residential and agricultural properties (NETROnline 2022). Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. The building has been modified by wooden covers on the window openings, but otherwise remains intact. The other resources comprising this former farm complex were destroyed circa 2014 (NETROnline 2022). The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional or national history. The property is related to the agricultural development of Lodi; however, as an outbuilding, it does not distinctly convey this association. Other resources comprising part of the former farm complex have been demolished, divorcing the remaining building from its original context. Research did not reveal that the property played an important role in the agricultural history of San Joaquin County. Therefore, the property at 1560 East Pine Street is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. No past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property lacks distinctive characteristics of the any particular style, serving as a fairly utilitarian outbuilding. This front-gabled-roofed house has elements of the Craftsman style such as exposed rafter tails supporting its broad overhanging roof, however, this relatively plain outbuilding has covered or removed windows, and does not have enough characteristics typical of Craftsman buildings to represent the style well. Therefore, the property at 1560 East Pine Street is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 3, this property is not an important example of a type, style, period, or method of construction, nor does it possess high artistic value or represent a design or engineering achievement. The property is an altered example of an agricultural outbuilding, a property type found throughout Lodi and San Joaquin County. Additionally, research did not uncover any direct associations with important designers or engineers. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 1560 East Pine Street appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. Covering the windows has diminished the property's integrity of design. Further, demolition of the remaining resources comprising the former farm complex within the past 10 years has impacted its design.

Setting is the physical environment of a historic property. Historical photographs from 1957 show the property retains its residential/agricultural surroundings. However, the destruction of the other farm resources on the parcel within the past 10 years have compromised the property's integrity of setting.

CONTINUATION SHEET

Property Name: 1560 East Pine Street (Resource ID 13)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. Covering the windows which has diminished the property's integrity of materials slightly.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. Covering the windows which has diminished the property's integrity of workmanship slightly.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Destruction of the other resources comprising part of this former farm complex have jeopardized the remaining building's ability to convey its integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. Destruction of the other resources within the past 10 years have jeopardized the remaining building's ability to convey its association as an outbuilding forming part of a larger farm complex.

In conclusion, the property at 1560 East Pine Street does not meet any of the CRHR criteria and has lost integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

B10. Significance (continued)

Historic Context

The property at 5990 East Sargent Road is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

CONTINUATION SHEET

Property Name: 5990 East Sargent Road (Resource ID 14)

Page 4 of 6

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 5990 East Sargent Road is currently owned by Sharon Meyers. Tax assessor records show the last deed transaction of the property dating to May 14, 2008. A 1911 county atlas does not indicate the name of the property owner (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding this property as agricultural with scattered residential and agricultural development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners (NETROnline 2022).

This property is previously unrecorded and unevaluated. The residence has been modified with new roofing and siding materials, and the detached garage has been modified with new garage doors, siding, and roofing materials. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. It is located in an agricultural setting east of Lodi, but research did not reveal that the property played a role in the agricultural history of the area. It also does not distinctly convey any important associations with Lodi's settlement, growth, or development. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. No past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. The residence reflects elements of the Craftsman style such as its jerkinhead roof, however, it has been altered through the installation of replacement materials. Other examples of resources with more character-defining features of this style exist. Additionally, research did not uncover any direct associations with important designers or engineers. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 5990 East Sargent Road appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The residence has been modified with new roofing and siding materials, and the detached garage has been modified with new garage doors, siding, and roofing materials. These changes have impacted the property's integrity of design.

Setting is the physical environment of a historic property. When the property was originally built the surrounding area included the railroad alignment and agricultural land. Although these uses still remain, the industrial property built to the southwest of the property has diminished its integrity of setting.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The residence has been modified with new roofing and siding materials, and the detached garage has been modified with new garage doors, siding, and roofing materials. These changes have impacted the property's integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The residence has been modified with new roofing and siding materials, and the detached garage has been modified with new garage doors, siding, and roofing materials. These changes have impacted the property's integrity of workmanship.

☒ Continuation ☐ Update

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property overall it continues to convey the character of a 1920s rural residential property. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The property retains its association as a 1920s rural residential property.

In conclusion, the property at 5990 East Sargent Road does not meet any of the CRHR criteria and has diminished integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property consists of a one-story Ranch-style residence and corrugated metal outbuilding that appears to be used as a workshop. The residence has a medium-pitch composite shingle hipped roof, brick and vinyl siding, vinyl windows, and a two-car garage with metal roll up door. The garage is accessed by a gravel driveway. The residence is heavily obscured from the public vantage point due to trees and brush. The outbuilding is one-story with corrugated metal roof and siding, a front-gable roof, and garage door facing Sargent Road to the south. It features a small aluminum window on the south elevation. The parcel is set in an agricultural area of Lodi. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

B10. Significance (continued)

Historic Context

The property at 6195 East Sargent Road is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 6195 East Sargent Road is currently owned by Matthew & Megan Manna. Tax assessor records show the last deed transaction of the property dating to April 2, 2013. A 1911 county atlas shows the parcel was owned by P. Sierrers (historicmapworks.com 2023). The earliest aerial photograph for the area dates from 1957 and shows the area surrounding the property as agricultural, with scattered residential and agricultural development. By the 1980s the area has more residential development on large parcels (NETROnline 2022). Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. The residence appears to have been modified with replacement vinyl windows, new roofing, and a new garage door. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. It is located in an agricultural setting east of Lodi, but research did not reveal that the property played a role in the agricultural history of the area. It also does not distinctly convey any important associations with Lodi's settlement, growth, or development. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that P. Sierrers made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. The residence reflects elements of the Ranch style such as its low massing, hipped roof, and one-story height, however, it has been altered through the installation of replacement materials. Other examples of resources with more character-defining features of this style exist. Additionally, research did not uncover any direct associations with important designers or engineers. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 6195 East Sargent Road appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. This property has been modified with new windows, new roofing, and replacement garage doors, which has slightly diminished its integrity of design.

Setting is the physical environment of a historic property. The property retains its agricultural surrounding and therefore its integrity of setting is intact.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. This property has been modified with new windows, new roofing, and replacement garage doors, which has slightly diminished its integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. This property has been modified with new windows, new roofing, and replacement garage doors, which has slightly diminished its integrity of workmanship.

CONTINUATION SHEET

Property Name: 6195 East Sargent Road (Resource ID 15)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property, overall, it continues to convey its character and appearance from its period of construction. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. This property would be recognizable to persons from the past and retains its association as a 1970s rural Ranch residence.

In conclusion, although it retains integrity, the property at 6195 East Sargent Road does not meet any of the CRHR criteria. Therefore, the property is not a historical resource for the purposes of CEQA.

Section P3a. Description (continued)

Residence 2 was built circa 1940 and displays Minimal Traditional elements. It is a one-story building with a front-gable roof and a brick and board and batten exterior. The windows are obscured by dark screens. The entrance is covered by a shed-roof porch with brick columns. The porch was added sometime between 1967 and 1984 (NETROnline 2023). The front door set on the porch is obscured by a security screen. There are several non-historic age outbuildings on the parcel dating from between 1993 and 2014 (NETROnline 2023).

B10. Significance (continued)

Historic Context

The property at 6058 East Pine Street is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its

wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

6058 East Pine Street

The property at 6058 East Pine Street is currently owned by Anna May Vollbrecht. Tax assessor records show the last deed transaction of the property dating to July 2, 1973. A 1911 county atlas shows ownership of the parcel was split between P. Sierrers and Dennis Moran (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development. The area directly across from the parcel was turned into an industrial or commercial campus circa 2002 (NETROnline 2022). Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. Residence 1 appears to have replacement windows, doors, and roof. The outbuilding has a replacement garage door and roofing material. Residence 2 appears to have replacement roofing, as well as a shed-roof porch addition from circa 1984 (NETROnline 2022). The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. It is located in an agricultural setting east of Lodi, but research did not reveal that the property played a role in the agricultural history of the area. It also does not distinctly convey any important associations with Lodi's settlement, growth, or development. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that P. Sierrers or Dennis Moran made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. Additionally, research did not uncover any direct associations with important designers or engineers. Residence 2 has elements of the Minimal Traditional style such as its compact footprint, gable roof, and one-story height, however, it has been altered through the installation of replacement materials and construction of a porch. Other examples of resources with more character-defining features of this style exist. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 6058 East Pine Street Road appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of this property has been modified with new windows, new roofing, and replacement garage doors, as well as non-historic-era outbuildings.

Setting is the physical environment of a historic property. The property's integrity of setting has been lost due to the construction of a large industrial development across East Pine Street within the past 30 years.

CONTINUATION SHEET

Property Name: 6058 East Pine Street (Resource ID 16)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. This property has been modified by the new windows, roofing material, and garage doors, which has diminished the integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. This property has been modified by the new windows, roofing material, and garage doors, which has diminished the integrity of workmanship.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Changes have occurred to the setting of the property, most notably including the industrial development across East Pine Street. This combined with replacement materials limits the ability of the two residences and the outbuilding to convey their character from their period of construction. Therefore, the property has diminished integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The cumulative effect of replacement materials and changes to the setting are such that the property is no longer able to convey its association as rural residential property from the first half of the twentieth century.

In conclusion, the property at 6058 East Pine Street does not meet any of the CRHR criteria and lacks integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property consists of a one-story cottage with Queen Anne elements, historic-era detached garage and dilapidated outbuilding to the southeast and south, and a modern-era outbuilding that appears to be used as a workshop to the southwest. The residence has a steeply pitched hipped roof with a brick chimney set on the slope. A front-gable projection is at the west end of the north façade that features a band of wood windows with decorative divided lights and a glazed wood door. The door is accessed by steps and is sheltered by a shed-roof portico addition. There appear to be a mix of wood and vinyl windows at other elevations. The exterior appears to be painted brick or textured stucco. The property is set in a rural/industrial area east of Lodi with a large modern industrial complex to the north. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

Section B10. Significance (continued)

Historic Context

The property at 6250 East Pine Street is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

6250 East Pine Street

CONTINUATION SHEET

Property Name: 6250 East Pine Street (Resource ID 17)

Page 4 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 6250 East Pine Street is currently owned by Jean Morimoto. Tax assessor records show the last deed transaction of the property dating to January 27, 2014. A 1911 county atlas shows the property was then owned by Dennis Moran (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development. By the 1980s the area had more residential development on large parcels (NETROnline 2022). The 1968 Lodi Directory indicated that Jean Morimoto and her father, Kiyoshi Morimoto, a farmer, resided at 6250 East Pine Street at that time (Polk's Lodi City Directory 1968). A 2007 obituary for Jean's mother, Yoshiko, indicates Kiyoshi and Yoshiko had resided in Lodi before their war-time internment at Tule Lake from 1942-1945, although it is unclear if they resided at the subject property during this time (Legacy.com 2007).

This property is previously unrecorded and unevaluated. It appears to have been modified through the installation of replacement vinyl windows at side elevation and new roofing on the residence, as well as a circa 2002 outbuilding. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. It is located in an agricultural setting east of Lodi, but research did not reveal that the property played a role in the agricultural history of the area. It also does not distinctly convey any important associations with Lodi's settlement, growth, or development. Further, although the Morimoto family have been long-time owners of the property, research did not indicate this property demonstrates any important events or trends associated with Japanese community in Lodi or San Joaquin County. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that Dennis Moran or members of the Morimoto family made any important contributions to history. No other past owners or renters were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. Additionally, research did not uncover any direct associations with important designers or engineers. The residence reflects elements of the Queen Anne style through its asymmetrical massing and decorative divided window lights, however, other examples of resources with more character-defining features of this style exist. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 6250 East Pine Street appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The property retains integrity of design despite some replacement windows and non-original roofing material at the residence and the construction of a modern-era outbuilding circa 2002.

Setting is the physical environment of a historic property. Integrity of setting has been lost due to large-scale industrial development directly across East Pine Road within the past 30 years, which marks a departure from the property's agricultural surroundings.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The property retains integrity of materials despite some replacement windows and non-original roofing material at the residence and the construction of a modern-era outbuilding circa 2002.

CONTINUATION SHEET

Property Name: 6250 East Pine Street (Resource ID 17)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The property retains integrity of workmanship despite some replacement windows and non-original roofing material at the residence.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property and its setting, overall it continues to convey the character of a 1920s rural residential property. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. This property retains its association as a 1920s rural residential property and would be recognizable to persons from the past.

In conclusion, although it appears to retain integrity, the property at 6250 East Pine Street does not meet any of the CRHR criteria. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property consists of an outbuilding that appears to be used as a workshop and is set in a vineyard. It is not visible from public vantage points as it is located approximately 750 feet from North Curry Avenue and is surrounded by mature trees. Based on limited views and aerial images, it is a one-story building with a rectangular footprint and low-pitch front-gable roof. The Central California Traction Railroad Central Valley line extends west of the parcel. Opposite the railroad tracks is modern-era industrial development. There appears to be an abandoned orchard at the east side of the parcel, facing North Curry Avenue. The property is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

The property at 16463 North Curry Avenue is not eligible for listing in the California Register of Historical Resources (CRHR) and is not a historical resource for purposes of the California Environmental Quality Act (CEQA). The property does not meet any of the significance criteria necessary for eligibility for listing in the CRHR. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. Refer to the continuation sheet for a full evaluation.

Section 10B. Significance (continued)

Historic Context

The property at 16463 North Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

16463 North Curry Avenue

CONTINUATION SHEET

Property Name: 16463 North Curry Avenue (Resource ID 18)

Page 4 of 6

*Date January 2023

☒ Continuation ☐ Update

The property at 16463 North Curry Avenue is currently owned by Melinda S. Barbera. Tax assessor records show the last deed transaction of the property dating to June 6, 2013. A 1911 county atlas shows the parcel was owned by Mrs. C.N. Cursy (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development. By the 1990s the area to the west of the parcel was characterized by industrial development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. Based on a review of aerials, no additions have occurred at the building; however, other changes could not be assessed due to limited views from public vantage points. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. It is in an agricultural setting east of Lodi, but research did not reveal that the property played a role in the agricultural history of the area. Other vineyards exist in Lodi and San Joaquin County. Research did not uncover that this property was the first vineyard, or that it has historically been an important business in the area. Additionally, it does not distinctly convey any important associations with Lodi's settlement, growth, or development. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that Mrs. C.N. Cursy made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. Additionally, research did not uncover any direct associations with important designers or engineers. Based on limited views and review of aerials, it appears to be a small, utilitarian outbuilding associated with the surrounding vineyard. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 16463 North Curry Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. Based on review of aerials, no additions have occurred at the building; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of design.

Setting is the physical environment of a historic property. Integrity of setting has been diminished due to large-scale industrial development to the west within the past 30 years, which marks a departure from the property's agricultural surroundings.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. Based on review of aerials, no additions have occurred at the building; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. Based on review of aerials, no additions have occurred at the building; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of workmanship.

CONTINUATION SHEET

*Date January 2023

☒ Continuation ☐ Update

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Based on review of aerials, no additions have occurred at the building; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. Based on a review of aerials, no additions have occurred at the building; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of association.

In conclusion, the property at 16463 North Curry Avenue does not meet any of the CRHR criteria. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property is a residential farm complex that is not visible from public vantage points. The property is located 1,000 feet down a private, locked driveway and is obscured behind by privacy fencing, hedges, and a vineyard. Aerial images indicate there are two historic-era residences; a small outbuilding that appears to be a historic-era garage or shop; and a modern-era outbuilding that appears to be a garage or shop at the north of the parcel. The property is set in a vineyard, surrounded by mature trees. The Central California Traction Railroad Central Valley line runs west of the parcel. Opposite the railroad tracks is modern-era industrial development. The residence nearest North Curry Avenue appears to have an irregular footprint with a low pitch side-gable roof based on limited views. The residence at rear of the property was not visible from public vantage points or Google Streetview but appears to have a square footprint and hipped roof. The property is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

Section B10. Significance (continued)

Historic Context

The property at 16141 North Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

CONTINUATION SHEET

Property Name: 16141 North Curry Avenue (Resource ID 19)

Page 4 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 16141 North Curry Avenue is currently owned by Richard S. Galantine. Tax assessor records show the last deed transaction of the property dating to June 19, 2009. A 1911 county atlas shows the parcel was owned by Mrs. C.N. Cursy (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development. By the 1990s, the area to the west of the parcel was characterized by industrial development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. Based on aerials, no additions have occurred at the historic-era residences and outbuildings; however, other changes could not be assessed due to no views from public vantage points. An outbuilding was added at the north end of the parcel circa 2018. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. It is located in an agricultural setting east of Lodi, but research did not reveal that the property played a role in the agricultural history of the area. Research also did not uncover that this property has historically been an important business in the area. Additionally, it does not distinctly convey any important associations with Lodi's settlement, growth, or development. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that Mrs. C.N. Cursy made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, research did not uncover any direct associations with important designers or engineers. Based on review of aerials, the property does not appear to embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. However, no views of the property were available from public vantage points. Therefore, the property does not appear to be eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 16141 North Curry Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. Based on review of aerials, no additions have occurred to the historic-era resources on the property; however, other changes could not be assessed due to limited views from public vantage points. An outbuilding was added circa 2018. Based on this limited inspection, the property is assumed to retain integrity of design.

Setting is the physical environment of a historic property. Integrity of setting has been diminished due to large-scale industrial development to the west within the past 30 years, which marks a departure from the property's agricultural surroundings.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. Based on review of aerials, no additions have occurred to the historic-era resources on the property; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. Based on review of aerials, no additions have occurred to the historic-era resources on the property; however, other

changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of workmanship.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Based on review of aerials, no additions have occurred to the historic-era resources on the property; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. Based on review of aerials, no additions have occurred to the historic-era resources on the property; however, other changes could not be assessed due to limited views from public vantage points. Based on this limited inspection, the property is assumed to retain integrity of association.

In conclusion, the property at 16141 North Curry Avenue is not CRHR eligible due to a lack of significance. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property consists of a one-story Ranch-style residence with an attached garage and two non-historic-era outbuildings. The residence has a low-pitch, tile-covered hip roof and two entrances: one at the west side of the east facade under an eave overhang supported by two columns and one to the east of the facade with a security door. There is a large, vinyl sliding glass door at the west end of the facade as well as small rectangular vinyl windows between the two entrances. The residence's exterior is clad in vinyl siding and the garage has a metal roll up door. There is a brick and wooden fence fronting the property. The property is set in a vineyard. The Central California Traction Railroad Central Valley line runs west of the parcel. Opposite the railroad tracks is industrial development that dates from the past 30 years. The property is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

Section 10B. Significance (continued)

Historic Context

The property at 15661 North Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

15661 North Curry Avenue

CONTINUATION SHEET

Property Name: 15661 North Curry Avenue (Resource ID 20)

Page 4 of 7 Recorded By: A. Reese *Date January 2023 ☒ Continuation ☐ Update

The property at 15661 North Curry Avenue is currently owned by Jose and Maria Morales. Tax assessor records show the last deed transaction of the property dating to May 13, 2021. A 1911 county atlas shows the parcel was owned by Mrs. C.N. Cursy (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development. By the 1990s the area to the west of the parcel was characterized by industrial development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. The residence it appears to have been modified through the installation of replacement vinyl siding and vinyl windows as well as a security door within the past circa 30 years. Two outbuildings were added on the property circa 1998 (NETROnline 2023). The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. It is located in an agricultural setting east of Lodi, but research did not reveal that the property played a role in the agricultural history of the area. It also does not distinctly convey any important associations with Lodi's settlement, growth, or development. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that Mrs. C.N. Cursy made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. The residence reflects elements of the Ranch style such as its hipped roof and horizontal massing, however, it has been altered through the installation of replacement vinyl siding and vinyl windows as well as a modern security door within the past circa 30 years. Other examples of resources with more character-defining features of this style exist. Additionally, research did not uncover any direct associations with important designers or engineers. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 15661 North Curry Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. Integrity of design is compromised due to the installation of replacement vinyl siding and vinyl windows as well as a modern security door within the past circa 30 years. Additionally, one of the non-historic-outbuildings is highly visible from the façade. Due to these changes, the property no longer conveys its original design.

Setting is the physical environment of a historic property. Integrity of setting has been diminished due to large-scale industrial development to the west within the past 30 years, which marks a departure from the property's agricultural surroundings.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. Integrity of materials is compromised due to the installation of replacement vinyl siding and vinyl windows as well as a modern security door within the past circa 30 years.

CONTINUATION SHEET

Property Name: 15661 North Curry Avenue (Resource ID 20)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. Integrity of workmanship is compromised due to the installation of replacement vinyl siding and vinyl windows as well as a modern security door within the past circa 30 years.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The aforementioned changes have affected the property's ability to convey its historic-era appearance and character. Therefore, integrity of feeling is diminished.

Association is the direct link between an important historic event or person and a historic property. The cumulative impact of changes to the property have diminished the property's ability to convey its association as a mid-century Ranch-style residential rural property.

In conclusion, the property at 15661 North Curry Avenue does not meet any of the CRHR criteria and has lost integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property consists of a one-story Craftsman-style residence with an attached two-story tank house, a detached garage, and a non-historic-era outbuilding built circa 1984 (NETROnline 2022). The residence has a front-gable roof with extended eaves, a clapboard exterior, and original double-hung one-over-one wood windows. A partial-width porch with a front-gable roof supported by battered wooden columns resting on brick pedestals is set on the south end of the east façade. An addition was built at the rear of the residence sometime between 1984 and 1993 to attach it to the tank house (NETROnline 2022). The tank house appears to have been converted to use as additional living space around this time. The garage is a simple gable-roof building with clapboard siding and one garage bay. The property is set in a rural area of Lodi with industrial development and the Central California Traction Railroad Central Valley line to the west. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

Applicable Criteria 1, 3

The property at 15505 North Curry Avenue is eligible for listing in the California Register of Historical Resources (CRHR) under Criteria 1 and 3 and is a historical resource for purposes of the California Environmental Quality Act (CEQA). The property retains a high degree of integrity and reflects important associations with the agricultural settlement phase of Lodi during the early twentieth century (Criterion 1). Further, it is intact and representative of a rural residential property from the 1920s with a Craftsman-style residence, tank house, and garage (Criterion 3). The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. Refer to the continuation sheet for a full evaluation.

Section B10. Significance (continued)

Historic Context

The property at 15505 North Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

The property at 15505 North Curry Avenue is currently owned by Leland and Janet Noma. Tax assessor records show the last deed transaction of the property dating to January 27, 1989. A 1911 county atlas shows the parcel was owned by Mrs. C.N. Cursy (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development (NETROnline 2022). Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. Historic aerials indicate the tank house was attached to the residence through the construction of an addition sometime between 1984 and 1993 (NETROnline 2022). The tank house then appears to have been converted to use as additional living space. The only other change to the residence appears to be the replacement of the original roofing material with composite shingles. A non-historic-era outbuilding was built at rear of the residence circa 1984 (NETROnline 2022). The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property is reflective of rural residential development occurring on small lots in Lodi during the early twentieth century. These small farms, typically consisting of agricultural land, a residence, and outbuildings, were commonly built during this period as the population outside of Lodi and in the agricultural areas of San Joaquin Valley increased. This property represents the trend of small "ranchette" style settlements outside San Joaquin Valley towns during the early twentieth-century. Due to its important associations with the agricultural settlement phase of Lodi, the property at 15505 North Curry Avenue is eligible for the CRHR under Criterion 1 and is considered a historical resource for the purposes of CEQA.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that Mrs. C.N. Cursy made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property presents an intact and cohesive example of a late 1920s rural residential property, including a Craftsman-style residence, an intact tank house, and outbuilding (garage). The residence reflects the Craftsman Style through its massing, roof with overhanging eaves, partial-width entry porch with battered columns and brick pedestals, and wood double-hung one-over-one windows. The intact tank house at the rear of the residence is a common design feature of early twentieth-century rural residences. Although the tank house was attached to the residence through the construction of a non-historic-era addition and subsequently converted to living space, it is still identifiable as a tank house and clearly represents its former purpose. Overall, the property clearly conveys its construction date and the Craftsman style. Therefore, the property at 15505 North Curry Avenue is eligible for the CRHR under Criterion 3 and is considered a historical resource for the purposes of CEQA.

Under CRHR Criterion 4, this property is not significant for its research potential. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies, and therefore is not eligible for the CRHR under Criterion 4.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 15505 North Curry Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. This property is largely unaltered and retains integrity of design.

Setting is the physical environment of a historic property. Historical photographs from 1957 show the neighboring residential properties in a similar arrangement to how they exist today. Industrial development west of the property dates from the early 2000s; however, the property faces away from this viewshed, and otherwise remains characterized by its agricultural surroundings. Therefore, the setting of the property is largely intact.

CONTINUATION SHEET

Property Name: 15505 North Curry Avenue (Resource ID 21)

Page 6 of 7

*Date January 2023

☒ Continuation ☐ Update

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The materials of this property remain intact, with original wood windows, clapboard siding, and wood columns and brick pedestals at the porch.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The property is largely unaltered and retains most of its originals materials. Therefore, integrity of workmanship is intact.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The property continues to convey its character and appearance as a 1920s Craftsman-style rural residential property. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The property would be recognizable to persons from the past and retains its association as a 1920s Craftsman-style rural residential property.

In conclusion, the property at 15505 North Curry Avenue meets CRHR Criteria 1 and 3 and retains integrity. The property is a historical resource for the purposes of CEQA. The period of significance for the property is 1928, corresponding to its construction date. The historic property boundary corresponds to its parcel boundaries.

Section B10. Significance (continued)

Historic Context

The property at 15415 North Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

Property Name: 15415 North Curry Avenue (Resource ID 22)

Page 4 of 6

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 15415 North Curry Avenue is currently owned by Richard and Ruth Diekman. Tax assessor records show the last deed transaction of the property dating to September 1, 1992. A 1911 county atlas shows the parcel was owned by E.G. Spare (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development. The building first appears between the 1967 and 1984 aeriels. By the 1990s the area to the west of the parcel had significant industrial development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. The residence appears to have new roofing and new garage doors, but the façade and other elevations are obfuscated from public vantage points by vegetation. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional or national history. The property is related to residential development in Lodi which was common during this period. Research did not reveal that the property played an important role in the agricultural history of San Joaquin County. Therefore, the property at 15415 North Curry Avenue is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that E.G. Spare made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. The residence reflects elements of the Ranch style such as its hipped roof and horizontal massing, however, other examples of resources with more character-defining features of this style exist. Additionally, research did not uncover any direct associations with important designers or engineers. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 15415 North Curry Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of this property has been modified with new roofing and a replacement garage door.

Setting is the physical environment of a historic property. An aerial from 1984 shows the neighboring residential properties in a very similar arrangement to what they are today. However, industrial development to the west has left the integrity of setting only partially intact.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The materials of this property have been modified by the new roofing material and garage door, which has resulted in a diminishment of the integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The workmanship of the property has been affected by the addition of new roofing material and garage doors.

CONTINUATION SHEET

Property Name: 15415 North Curry Avenue (Resource ID 22)

Page 5 of 6

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property overall it continues to convey the character of a 1960s Ranch house. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. This property would be recognizable to persons from the past and retains integrity of association as a 1960s Ranch house.

In conclusion, the property at 15415 North Curry Avenue does not meet any of the CRHR criteria and has lost integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

Historic Context

The property at 15403 North Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

15403 North Curry Avenue

CONTINUATION SHEET

Property Name: 15403 North Curry Avenue (Resource ID 23)

Page 4 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 15403 North Curry Avenue is currently owned by Richard and Ruth Diekman. Tax assessor records show the last deed transaction of the property dating to September 1, 1992. A 1911 county atlas shows the parcel was owned by E.G. Spare (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding the property as agricultural with scattered residential and agricultural development. By the 1990s the area to the west of the parcel was characterized by industrial development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. The residence has replacement roofing, windows, and doors installed within the past circa 40 years. The porch was enclosed over 50 years ago based on visual observation. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. The property is related to rural residential development in Lodi which was common in the early twentieth century. Research did not reveal that the property played an important role in the agricultural or residential history of San Joaquin County. Regardless, the property lacks sufficient integrity to convey any important associations due to replacement roofing materials, doors, and windows. Therefore, the property at 15403 North Curry Avenue is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that E.G. Spare made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property does not embody the distinctive characteristics of a type, period, or method of construction, nor does it possess high artistic value. Further, has been altered through the installation of replacement roofing materials, windows, and doors within the past circa 40 years. The porch also has been enclosed. Additionally, research did not uncover any direct associations with important designers or engineers. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 15403 North Curry Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of this property has been modified with new roofing, windows, and doors and enclosing the front porch.

Setting is the physical environment of a historic property. Aerial photographs from 1957 to 1984 show the neighboring residential properties in a very similar arrangement to what they are today, however, industrial development to the west has left the integrity of setting only partially intact.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The materials of this property have been modified by the new roofing, windows, and doors which has resulted in a diminishment of the integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The workmanship of the property has been affected by the addition of new roofing, siding, windows, and doors.

CONTINUATION SHEET

Property Name: 15403 North Curry Avenue (Resource ID 23)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property overall it continues to convey the character of an early twentieth-century rural residential property. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. This property likely would not be recognizable to persons from the past due to alterations and has lost integrity of association.

In conclusion, the property at 15403 North Curry Avenue does not meet any of the CRHR criteria and has lost integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property is an industrial agricultural packing plant located on four parcels. East Kettleman Lane and the Central California Traction Railroad (CCTR) Central Valley Line extend through the property. The CCTR serviced the property. There are three historic-age buildings on the property dating from between 1954 and 1967 that are identified as Building 1 through 3 in this form. Building 1 (constructed sometime between circa 1954 and 1957) is located on APN 049-230-110 to the north of East Kettleman Lane. It is a rectangular, flat roofed stucco building with a loading dock facing East Kettleman Lane and wrapping around the east elevation. There are four sets of double unglazed entry doors at the eastern façade and a small shed roof protecting the entrances (see continuation sheet). The packing plant is set in an industrial area of east Lodi. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

☒ Continuation ☐ Update

P3a. Description (continued)

Building 2 (constructed sometime between circa 1954 and 1957) is located on APN 049-230-150 and is an irregular plan, flat-roofed refrigerated storage building. The exterior is concrete and stucco, and there are industrial cooling apparatuses present at the east and west elevations and on the roof. Building 3 (constructed sometime between circa 1957 and 1967) is located on APNs 061-030-540 and 061-050-120. It has a medium-pitch, corrugated metal-clad front-gable roof with a large truck entrance facing East Kettleman Lane, as well as a large porch-roof extension that appears to serve as storage at the east elevation. The building is constructed of corrugated metal and wood.

The property also includes one modern-age building on the northern parcel dating to circa 1984 and one on the southern parcel dating to circa 1993.

Section B10. Significance (continued)

Historic Context

The property at 6021, 5950, and 5990 East Kettleman Lane is in the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly-constructed SPRR. The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and also passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 later shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the CCTR, which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by UPRR and BNSF (JRP Historical Consulting Services 2003).

This increase in transportation led to shifts in how farm business was conducted within the San Joaquin Valley. In the case of the subject property, the twentieth century saw multiple trends that coalesced into the type of fruit and vegetable packing plant that would

CONTINUATION SHEET

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

be housed there. Agricultural packing was historically conducted on individual farms, in small sheds or buildings located near fields, and these were often staffed with the families of the farmers themselves (Siebert 2003, 195). As these jobs were slowly unionized and mechanization of packing processes increased in the 1940s, commercial packing businesses thrived in central locations near rail or river transportation corridors. As mechanization increased, union packing jobs dropped sharply, but commercial packing businesses were well established by the 1970s, the period when Delta Packing Company was created, serving farms throughout the San Joaquin Valley (Siebert 2003, 195-196).

6021, 5950, and 5990 East Kettleman Lane

The property at 6021, 5950, and 5990 East Kettleman Lane is currently owned by Delta Packing Company of Lodi, Inc., and appears to be an industrial/agricultural business related to packing and storage of farm goods. Tax assessor records show the last deed transaction of the property dating to May 9, 2001. A website for Delta Packing indicates the firm was founded in 1976 by Carl Elkins and Lee Mettler, who sold the business to the Costamagna family in 2001, the last deed transaction on record (Deltapacking.com 2023). According to review of historic aerials, the historic-age buildings on the parcel were constructed sometime between 1954 and 1967. The buildings predate the packing company but research did not reveal their original use. Given their location close to the CCTR line, it was likely commercial or storage related. A 1911 county atlas shows the parcel at Section 18, Township 3 N, Range 7 E, owned by E. E. Purston, John Marshall, O. Rudloff, H. Tecklenburg Jr., and W.E. Shipment (historicmapworks.com 2023). Research using Newspapers.com and Ancestry.com did not reveal any additional information about Delta Packing or the property, and it appears that several other companies have operated under "Delta Packing" in the twentieth century, most notably in Isleton.

This property is previously unrecorded and unevaluated. It has been modified through replacement roofs, doors, windows, and other openings, such as garage bays, as well as construction of modern-era resources. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events. Packing houses for agricultural products grown and shipped out of Lodi and the San Joaquin Valley were constructed beginning in the late 1800s. A boom in fruit and vegetable packing occurred during the post-World War II period, when packing houses were centralized in larger commercial packing houses near transportation and commerce. The buildings at the Delta Packing property represent a later development in the packing industry given the founding of the company in 1976. The subject property represents a common type of agricultural commercial enterprise in the San Joaquin Valley. Research did not uncover that it has historically been an important or influential enterprise in the region. Therefore, the property at 6021, 5950, and 5990 East Kettleman Lane is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. The warehouses do not appear to be associated with any significant achievements of any individual persons based on research. Therefore, the property at 6021, 5950, and 5990 East Kettleman Lane is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property is not an important example of a type, period, or method of construction. The warehouses are utilitarian and are not demonstrative of any popular architectural style common to commercial or industrial properties during the late 1970s, such as New Formalism or the International Style. It is unlikely that the warehouses were designed by an architect, and the builder was not identified. Industrial properties are common in the region, and the subject property does not appear to be the work of a master. Therefore, the property at 6021, 5950, and 5990 East Kettleman Lane is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

CONTINUATION SHEET

Property Name: 6021, 5950, and 5990 East Kettleman Lane (Resource ID 24)

Page 5 of 10

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 6021, 5950, and 5990 East Kettleman Lane appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of the property has been impinged by replacement roofs, doors, windows, and other openings, such as garage bays.

Setting is the physical environment of a historic property. When the property was constructed, the surrounding area included the railroad alignment and agricultural land. The setting remains much as it did when the property was constructed, except that the industrial and residential population of the surrounding area has greatly increased, which has compromised the rural character of the property's original setting.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The integrity of materials has been compromised due to replacement roofs, doors, windows, and other openings, such as garage bays.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. No high degree of workmanship is associated with the utilitarian warehouse building, however, the limited workmanship present with the property is intact.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The property continues to convey the character of an industrial and commercial property, despite any alternations. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The property is an example of an industrial property constructed in the late 1970s and continues to convey that association.

In conclusion, the property at 6021, 5950, and 5990 East Kettleman Lane does not appear to possess sufficient significance to be eligible for the CRHR and has lost integrity of design, setting, materials, and workmanship. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

The subject property is a two-story Queen Anne-style residence and a one-bay detached garage. The main mass of the residence is covered by a side-gable roof. A front gable projects out on the south end of the east façade and features imbricated wood shingles and a tripartite arrangement of windows in the gable end. A front-gabled dormer is to the east of this projection. Contained under the projection in the first story is a partial-width front porch supported by wood columns. A glazed front door with sidelights is accessed from the porch. The exterior is clad in clapboard and windows are replacement vinyl units. The garage is a front-gabled wood-frame building with one bay and a replacement garage door. The property is set in a rural residential area of east Lodi with modern industrial development to the west. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

Applicable Criteria 3

The property at 15277 North Curry Avenue is eligible for listing in the California Register of Historical Resources (CRHR) and is a historical resource for purposes of the California Environmental Quality Act (CEQA). The property well represents an intact Queen Anne-style residence. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. Refer to the continuation sheet for a full evaluation.

Section B10. Significance (continued)

Historic Context

The property at 15277 North Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and also passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation network, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

15277 North Curry Avenue

CONTINUATION SHEET

Property Name: 15277 North Curry Avenue (Resource ID 25)

Page 4 of 7 Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 15277 North Curry Avenue is currently owned by Marcos Impearial. Tax assessor records show the last transaction of the property dating to September 3, 2020, a grant deed from the previous owners, Peter and Joan Verdoorn. A 1911 county atlas shows the parcel was owned by O. Pool (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows this property and its surroundings largely as they are today. Research using Newspapers.com and Ancestry.com did not reveal any information about the current or previous owners.

The residence is built in the Queen Anne style, which was widely popular in the United States and California between 1880 and 1910, is typically two stories tall and characterized by a high-pitched roof with prominent gable, patterned shingles, asymmetrical facades, and partial or full-width porches. The walls are usually clad with clapboard and decorative wooden trim.

The property is previously unrecorded and unevaluated. It has been altered through the installation of vinyl windows within the past circa 15 years and a modern garage door. It is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional or national history. The property is related to agricultural/residential development in the Lodi environs, however, it does not provide a representative example of a farming property. Agricultural fields surround the residence, but the property lacks farm-related outbuildings that convey a sense of its farming operations. Research did not reveal that the property played an important role in the agricultural history of San Joaquin County. Therefore, the property at 15277 North Curry Avenue is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Research did not uncover that O. Pool or Peter and Joan Verdoorn made any important contributions to history. No other past owners were identified during research. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property provides a good, intact example of a Queen Anne residence. It exhibits numerous features reflective of the style, including its high-pitched roof with prominent gable, patterned shingles, asymmetrical massing, and partial-width porch. Although windows have been replaced, they retain the size and placement of the original openings. Despite this change, the residence retains a high level of integrity. Therefore, the property at 15277 North Curry Avenue is eligible for the CRHR under Criterion 3 and is considered a historical resource for the purposes of CEQA.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 15277 North Curry Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design has been largely unaltered. The replacement of the windows and garage door do not have an overall impact to the presentation of the house's design as a Queen Anne residence as it still conveys the essential character-defining features of the style.

Setting is the physical environment of a historic property. The property surroundings are still characterized as agricultural, but industrial development to the west has slightly diminished integrity of setting.

CONTINUATION SHEET

Property Name: 15277 North Curry Avenue (Resource ID 25)

Page 5 of 7 Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. Except for replacement windows at the residence and a replacement garage door at the garage, the property retains its other original materials. Therefore, the integrity of materials is intact. This includes those materials that distinctly convey its significance as a representative example of the Queen Anne Style, such as clapboard siding and patterned shingles.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The property has been largely unaltered since it was originally constructed and retains integrity of workmanship.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The property continues to convey its character and appearance as an early twentieth-century Queen Anne rural residence. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The property would be recognizable to persons from the past. It is largely unaltered and conveys its association as an early twentieth-century Queen Anne rural residence.

In conclusion, the property at 15277 North Curry Avenue possesses architectural significance under CRHR Criterion 3 and retains integrity. Therefore, the property is a historical resource for the purposes of CEQA. The period of significance corresponds to 1906, its date of construction. The historic property boundary is limited to the footprint of residence.

Section B10. Significance (continued)

Historic Context

The property at 6050, 6044, and 6030 East Kettleman Lane is in the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly-constructed SPRR. The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and also passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 later shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aeriels (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the CCTR, which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by UPRR and BNSF (JRP Historical Consulting Services 2003).

6050, 6044, and 6030 East Kettleman Lane

The property at 6050, 6044, and 6030 East Kettleman Lane, is currently owned by SS Hernandez Properties, LLC, and serves warehouse (parcelquest.com 2022). Tax assessor records show the last deed transaction of the property dating to March 5, 2013. A 1911 county atlas shows the parcel at Section 18, Township 3 N, Range 7 E. This parcel was owned by John Marshall (historicmapworks.com 2023). According to historic aeriels, the warehouse building was constructed circa 1967. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

The property is previously unrecorded and unevaluated. It has been altered by two large modern-era additions. The property is evaluated below.

☒ Continuation ☐ Update

Under CRHR Criterion 1, this property has no significant associations with important historic events. The property is related to industrial development in east Lodi. Research did not reveal that the property played an important role in the industrial development of Lodi. Many other 1960s industrial properties exist in the area. Research did not uncover that this property has historically been important to the area. Therefore, the property at 6050, 6044, and 6030 East Kettleman Lane is not eligible for the CRHR under Criterion 1.

Under NRHP Criterion B or CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. The warehouse does not appear to be associated with any significant achievements of any individual persons, and research did not reveal any past owners related to the property. Therefore, the property at 6050, 6044, and 6030 East Kettleman Lane is not eligible for the CRHR under Criterion 2.

Under NRHP Criterion C or CRHR Criterion 3, this property is not an important example of a type, period, or method of construction. The warehouse is not demonstrative of any popular architectural style common to commercial or industrial properties during the late 1960s, such as the International Style. It is unlikely that the warehouse was designed by an architect, and the builder was not identified. Many other 1960s industrial properties exist in the region, and the subject property does not appear to be the work of a master. Therefore, the property at 6050, 6044, and 6030 East Kettleman Lane is not eligible for the CRHR under Criterion 3.

Under NRHP Criterion D or CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 6050, 6044, and 6030 East Kettleman Lane appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The integrity of design has been compromised by two large modern-era additions to the building.

Setting is the physical environment of a historic property. When the property was constructed, the surrounding area included the railroad alignment and industrial/agricultural land. The setting remains much as it did when the property was constructed, except that the industrial and residential population of the surrounding area has greatly increased, which has compromised the rural character of the property's original setting.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The integrity of materials has been compromised by two additions to the building, but the remaining materials related to utilitarian construction appear to be intact.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The additions have also diminished integrity of workmanship.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The property continues to convey the character of an industrial and commercial property, despite alterations. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The property is an example of an industrial building constructed in the late 1960s and continues to convey that association.

In conclusion, the property at 6050, 6044, and 6030 East Kettleman Lane does not appear to possess sufficient significance to be eligible for the CRHR and has lost integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

Section B10. Significance (continued)

Historic Context

The property at 6042 East Kettleman Lane is in the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly-constructed SPRR. The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and also passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 later shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aeriels (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the CCTR, which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by UPRR and BNSF (JRP Historical Consulting Services 2003).

6042 East Kettleman Lane

The property at 6042 East Kettleman Lane is currently owned by David A. & Patricia M. Kirsten and serves warehouse (parcelquest.com 2022). Tax assessor records show the last deed transaction of the property dating to December 20, 2016. A 1911 county atlas shows the parcel at Section 18, Township 3 N, Range 7 E. This parcel was owned by O. Rudloff (historicmapworks.com 2023). According to historic aeriels, the warehouse building was constructed circa 1957. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

The property is previously unrecorded and unevaluated. It has been altered through the installation of replacement vinyl siding, new windows, new garage bay doors, and window awnings. The property is evaluated below.

Evaluation

CONTINUATION SHEET

Property Name: 6042 East Kettleman Lane (Resource ID 27)

Page 4 of 6

Recorded By: A. Reese

☒ Continuation ☐ Update

Under CRHR Criterion 1, this property has no significant associations with important historic events. The property is related to industrial development in east Lodi. Research did not reveal that the property played an important role in the industrial development of Lodi and does not distinctly embody any important events or trends. Therefore, the property at 6042 East Kettleman Lane is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. The property does not appear to be associated with any significant achievements of any individual persons, and research did not reveal any past owners related to the property. Therefore, the property at 6042 East Kettleman Lane is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property is not an important example of a type, period, or method of construction. The warehouse is utilitarian in design and is not demonstrative of any popular architectural style common to commercial or industrial properties during the 1950s, such as the International Style. It is unlikely that the warehouse was designed by an architect, and the builder was not identified. Many other 1950s industrial properties exist in the region, and the subject property does not appear to be the work of a master. Therefore, the property at 6042 East Kettleman Lane is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 6042 East Kettleman Lane appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The integrity of design has been compromised by replacement and installation of replacement vinyl siding, new windows, new garage bay doors, and window awnings.

Setting is the physical environment of a historic property. When the property was constructed, the surrounding area included the railroad alignment and industrial/agricultural land. The setting remains much as it did when the property was constructed, except that the industrial and residential population of the surrounding area has greatly increased, which has compromised the rural character of the property's original setting.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The integrity of materials has been compromised due to replacement vinyl siding, new windows, new garage bay doors, and window awnings.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The replacement vinyl siding, new windows, new garage bay doors, and window awnings have also affected the property's integrity of workmanship.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The property continues to convey the character of an industrial and commercial property, despite the alternations. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The property is an example of an industrial building constructed in the late 1950s and continues to convey that association.

In conclusion, the property at 6042 East Kettleman Lane does not appear to possess sufficient significance to be eligible for the CRHR and has lost integrity of design, setting, materials, and workmanship. Therefore, the property is not a historical resource for the purposes of CEQA.

☒ Continuation ☐ Update

Historic Context

The property at 6312 East Kettleman Lane is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

6312 East Kettleman Lane

The property at 6312 East Kettleman Lane is currently owned by Jason P. & Kimberly A. Eells. Tax assessor records show the last deed transaction of the property dating to November 10, 2014. A 1911 county atlas shows the parcel in Section 18, Township 3 N, Range 7 E,

owned by O. Rudloff (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding this property as agricultural with scattered residential and agricultural development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. The residence has replacement roofing, siding, windows, doors and front porch. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. The property is related to rural residential development in Lodi which was common in the early nineteenth century. Research did not reveal that the property played an important role in the agricultural or residential history of San Joaquin County. Therefore, the property at 6312 East Kettleman Lane is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Therefore, the property at 6312 East Kettleman Lane Avenue is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property reflects some elements of the Minimal Traditional Style, such as its roof shape and small footprint. However, modifications including the new roof, windows, siding, doors and front porch have diminished the property's integrity. Other intact examples of this style with more character-defining features exist in the region. Therefore, the property at 6312 East Kettleman Lane is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 6312 East Kettleman Lane appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of this property has been modified with new roofing, siding, windows, doors and front porch.

Setting is the physical environment of a historic property. Aerial photographs from 1957 to 1984 show the neighboring residential properties in a very similar arrangement to what they are today. Therefore the integrity of setting is intact.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The property have been modified by the new roofing, siding, windows, doors, and front porch, which has resulted in a diminishment of the integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The above-mentioned changes have compromised integrity of workmanship.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property, overall, it continues to convey the character of a rural property from its period of construction. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. Although some modifications have occurred to the property, overall, it continues to convey the character of a rural property from its period of construction. It retains integrity of association.

CONTINUATION SHEET

Property Name: 6312 East Kettleman Lane (Resource ID 28)

Section B10. Significance (continued)

Historic Context

The property at 14541 North Curry Avenue and 14501 Curry Avenue is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

14541 North Curry Avenue and 14501 Curry Avenue

CONTINUATION SHEET

Property Name: 14541 North Curry Avenue and 14501 Curry Avenue (Resource ID 29)

Page 4 of 7 Recorded By: A. Reese *Date January 2023 ☒ Continuation ☐ Update

The property at 14541 North Curry Avenue and 14501 Curry Avenue is currently owned by Gary G. Koeplin. Tax assessor records show the last deed transaction of the property dating to April 16, 2004. A 1911 county atlas shows the parcel in Section 17, Township 3 N, Range 7 E, owned by W. N Mitchell (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding this property as agricultural with scattered residential and agricultural development. This building first appears between the 1957 and 1967 aeriels. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. Aerials indicate the garage was a significant added to the north elevation sometime between 1993 and 1998, and there appear to be new windows, roofing, doors, new garage door, and a modern-age carport (NETROnline 2022). The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. The property is related to residential development in Lodi during the twentieth century. Research did not reveal that the property played an important role in the agricultural or residential history of San Joaquin County. Therefore, the property is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Therefore, the property is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property reflects elements of the Ranch style, such as its horizontal massing and one-story height. However, modifications including the large garage addition, new roof and windows have diminished its integrity. Other more intact examples of Ranch-style residences exist in the region. Therefore, the property is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of this property has been modified with a garage addition, new roofing, and a replacement garage door.

Setting is the physical environment of a historic property. Aerial photographs from 1967 show the neighboring residential properties in a very similar arrangement to what they are today. Therefore, the integrity of setting is intact.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The property has been modified by the garage addition, new roofing material, and new windows, which has resulted in a diminishment of the integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The workmanship of the property has been affected by the aforementioned changes.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property, overall, it continues to convey the character of a rural property. Therefore, the property retains integrity of feeling.

CONTINUATION SHEET

Property Name: 14541 North Curry Avenue and 14501 Curry Avenue (Resource ID 29)

Page 5 of 7 Recorded By: A. Reese *Date January 2023 ☒ Continuation ☐ Update

Association is the direct link between an important historic event or person and a historic property. Despite changes, this property is able to convey its association as a 1960s Ranch-style residence.

In conclusion, the property at 14541 North Curry Avenue, 14501 Curry Avenue does not meet any of the CRHR criteria and has lost integrity, therefore, the property is not a historical resource for the purposes of CEQA.

Section B10. Significance (continued)

Historic Context

The property at 7106 East Kettleman Lane is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and also passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation network, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

7106 East Kettleman Lane

CONTINUATION SHEET

Property Name: 7106 East Kettleman Lane (Resource ID 30)

Page 4 of 7 Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 7106 East Kettleman Lane is currently owned by Steven K. and Laura M. Nickel. Tax assessor records show the last transaction of the property dating to December 28, 1990. A 1911 county atlas shows the property in Section 17, Township 3 N, Range 7 E owned by T.G. Chappins (historicmapworks.com 2022). The earliest aerial photograph of the area dates from 1957 and shows this property and its surroundings largely as they are today. Research using Newspapers.com and Ancestry.com did not reveal any information about the current or previous owners.

The residence reflects the Folk Victorian Style, which was widely popular in the United States and California between 1870-1910. The style is characterized by its simple form, spindle work detailing, and applied decoration. The subject property is an excellent example of a Folk Victorian rural residence Lodi. It incorporates numerous character-defining features of this style, including its high-pitched roof with prominent gable, full-width front porch, spindle work porch detailing, clapboard exterior, and original windows.

This property is previously unrecorded and unevaluated. It has been modified through the installation of a replacement door, but otherwise is unchanged. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. The property is related to residential development in the agricultural area east of Lodi, however, it is not a particularly good example of a farming property. Agricultural fields surround the well-preserved house, yet the property lacks farm-related historic-age outbuildings that convey its use as a farming property. Research did not reveal that the property played an important role in the agricultural history of San Joaquin County. Therefore, the property at 7106 East Kettleman Lane is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Historical research determined that the property is currently owned by Steven K. and Laura M. Nickel. The residence does not appear to be associated with any significant achievements of any individual persons or the companies it has operated under. Therefore, the property at 7106 East Kettleman Lane is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property embodies the Folk Victorian-style through its high-pitched roof with prominent gable, full-width front porch, spindle work porch detailing, clapboard exterior, and original windows. The property retains a high degree of integrity and changes appear to be limited to a replacement front door. Therefore, the property at 7106 East Kettleman Lane is eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 7106 East Kettleman Lane appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design has been largely unaltered with the house retaining its siding, massing, spindle work, full-width front porch, and windows. Although the front door appears to have been replaced, the building still conveys its original appearance. Therefore, integrity of design is intact.

CONTINUATION SHEET

Property Name: 7106 East Kettleman Lane (Resource ID 30)

Page 5 of 7 Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Setting is the physical environment of a historic property. Aerial photographs from 1957 show this property and the neighboring agricultural properties in a very similar arrangement to what they are today. Therefore, it retains integrity of setting.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. With the exception of the replacement front door, original materials have been retained. This includes the clapboard exterior, original windows, and spindle work details that are character-defining features of the Folk Victorian Style. Therefore, the integrity of materials is intact.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The property has been largely unaltered since it was originally constructed and retains integrity of workmanship.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The property continues to convey the character of a 1900s rural Folk Victorian-style property. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. The property is an example of a Folk Victorian Style residence dating from the early twentieth century and continues to convey that association.

In conclusion, the property at 7106 East Kettleman Lane possesses architectural significance under CRHR Criterion 3 and retains all seven aspects of integrity. Therefore, the property is a historical resource for the purposes of CEQA. Its period of significance is 1900, corresponding to its construction date. The historic property boundary is limited to the footprint of the residence.

Section B10. Significance (continued)

Historic Context

The property at 14453 North Vintage Road is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

CONTINUATION SHEET

Property Name: 14453 North Vintage Road (Resource ID 31)

Page 4 of 6

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 14453 North Vintage Road is currently owned by Dorothy A Kutlik. Tax assessor records show the last deed transaction of the property dating to July 3, 1996. A 1911 county atlas shows the parcel in Section 17, Township 3 N, Range 7 E, owned by T. M Jackson (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding this property as agricultural with scattered residential and agricultural development. This property first appears in the 1967 aerial (NETOnline 2022). Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. Visual inspection indicates the residence has replacement windows, roofing, and siding. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional or national history. The property is related to the residential development of Lodi during the twentieth century. Research did not reveal that the property played an important role in the agricultural history of San Joaquin County or that it embodies any important events or trends related to the residential development of the area. Therefore, the property at 14453 North Vintage Road is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Historical research has determined the property is currently owned by Dorothy A. Kutlik. The residence does not appear to be associated with any significant achievements of any individual persons or the companies it has operated under. Therefore, the property at 14453 North Vintage Road Avenue is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property reflects elements of the Ranch style, such as its low massing and one-story height. However, modifications including replacement windows, roofing, and siding has diminished its integrity. Other more intact examples of Ranch-style residence exist in the region. Therefore, the property at 14541 North Curry Avenue, 14453 North Vintage Road is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 14453 North Vintage Road appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of this property has been diminished due to replacement windows, roofing, and siding.

Setting is the physical environment of a historic property. Aerial photographs from 1967 show the neighboring residential properties in a very similar arrangement to what they are today. Therefore, the integrity of setting is intact.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The property has been modified by replacement windows, roofing, and siding, which has diminished integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The aforementioned changes also have diminished integrity of workmanship.

CONTINUATION SHEET

Property Name: 14453 North Vintage Road (Resource ID 31)

Page 5 of 6

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property, overall, it continues to convey the character of a 1960s Ranch-style rural property. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. This property continues to convey its association as a 1960s Ranch-style rural residence.

In conclusion, the property at 14453 North Vintage Road does not meet any of the CRHR criteria and has lost integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

*P3a. Description:

This property consists of a Craftsman-style residence, tank house, and garage/carport. The residence is single story with an irregular footprint, and a jerkinhead roof with exposed rafter tails tucked under the eaves, clapboard siding, and a partial-width porch terminating in a jerkinhead roof supported by wood columns. There is a brick chimney at the west elevation, as well as a glazed entrance door. The tank house is a two-story rectangular building with a pyramidal roof and an exterior metal staircase; it appears to have been converted to living quarters. The carport and tank house were only partially visible from public vantage points. The property is located in a rural residential area of east Lodi on a vineyard. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.

Area San Joaquin Valley

Period of Significance 1936

Property Type Residential

Applicable Criteria 1, 3

The property at 7150 Kettleman Lane is eligible for listing in the California Register of Historical Resources (CRHR) and is a historical resource for purposes of the California Environmental Quality Act (CEQA). The subject property provides a good, intact example of a 1930s rural residential property including an intact tank house, Craftsman-style residence, and an associated garage. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. Refer to the continuation sheet for a full evaluation.

Section B10. Significance (continued)

Historic Context

The property at 7150 Kettleman Lane is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

CONTINUATION SHEET

Property Name: 7150 East Kettleman Lane (Resource ID 32)

Page 4 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 7150 Kettleman Lane is currently owned by Jackie W. Metcalf. Tax assessor records show the last deed transaction of the property dating to July 27, 1998. A 1911 county atlas shows the parcel in Section 17, Township 3 N, Range 7 E; the east side of the parcel was owned by Charles Rossi and the west by J. Rohrbac. (historicmapworks.com 2023). The earliest aerial photograph of the area dates to 1957 and shows the area surrounding this property as agricultural with scattered residential and agricultural development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners (NETROnline 2022).

This property is previously unrecorded and unevaluated. Changes to the residence appear to be limited to replacement of the original roofing material with composite shingle and replacement windows. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has significant associations with early rural residential development on smaller lots in Lodi. These small farms, typically consisting of agricultural land, a residence, and outbuildings, were commonly built during the early-twentieth century as the population outside of Lodi and within agricultural areas of the San Joaquin Valley increased. This well-preserved property demonstrates its association with the agricultural settlement phase of Lodi and the trend of small "ranchette" style settlements outside San Joaquin Valley towns. Therefore, the property at 7150 Kettleman Lane is eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Historical research has determined the property is currently owned by Jackie W. Metcalf. The residence does not appear to be associated with any significant achievements of any individual persons or the companies it has operated under. Therefore, the property at 7150 Kettleman Lane is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property presents a representative example of a 1930s Craftsman-style rural residence, including an intact tank house and garage. The residence expresses the style through its asymmetrical massing, jerkinhead roof with wide eaves and exposed rafter tails, and partial-width porch. The intact tank house at the rear of the residence is a common design feature of early twentieth-century rural residential properties. Despite the tank house being converted to living space, it is still identifiable as a former tank house. Overall, the property clearly conveys its construction date, style, and configuration. Therefore, the property at 7150 Kettleman Lane is eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 7150 Kettleman Lane appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. Despite alterations, this property conveys its original appearance. It retains integrity of design.

Setting is the physical environment of a historic property. Aerial photographs from 1957 show the neighboring residential properties in a very similar arrangement to what they are today. Therefore, the setting of the property is intact.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. Integrity of materials is slightly diminished. With the exception of the replacement roofing and several replacement windows, other original materials are intact.

CONTINUATION SHEET

Property Name: 7150 East Kettleman Lane (Resource ID 32)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. Integrity of materials is slightly diminished due to the aforementioned changes.

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. The property continues to convey the character of a rural property from its period of construction. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. This property would be recognizable to persons from the past and conveys its association as a 1930s rural residential property.

In conclusion, the property at 7150 Kettleman Lane meets CRHR Criteria 1 and 3 and retains its overall integrity. The former tank house and garage are contributing resources. The property is a historical resource for the purposes of CEQA. The period of significance for the property is 1936, corresponding to its construction date. The historic property boundary corresponds to the parcel lines.

Section B10. Significance (continued)

Historic Context

The property at 14496 North Vintage Road is east of the City of Lodi in San Joaquin County in the San Joaquin Valley. San Joaquin County was formed when California achieved statehood in 1850. Cartographic review indicates the API environs remained sparsely populated during this time. Lodi later was established on the west end of the API in 1869 along the newly constructed Southern Pacific Railroad (SPRR). The ease of transportation afforded by the SPRR and subsequent railroads coupled with an expanding road network contributed to the API environs' burgeoning agricultural industry during the second half of the nineteenth century. The area also benefited from its proximity to Stockton, a major trade center in the region.

Maps of the API from 1856 and 1857 depict two parallel roads extending in a northeast-southwest orientation through the western half of the API, the easternmost of which roughly follows the alignment of present-day SR 88 (General Land Office 1855, 1865). The remainder of the API was sparsely developed during this time. Although the API still retains its rural character, arrival of the SPRR led to the establishment of a new railroad town at Lodi at the west end of the API in 1869 (City of Lodi California n.d.). The SPRR mainline extended in a north-south orientation through Lodi approximately 0.82 mile west of the API and passed through the nearby towns of Elk Grove, Galt, Stockton, Lathrop, and Altamont Pass, California. The SPRR currently forms part of the UPRR alignment.

Another railroad, the San Joaquin and Sierra Nevada Railroad (SJ&SNR), was built in the API environs shortly after the SPRR. The segment of the line between Lodi and Woodbridge, California, opened for business in 1882, while construction of the line continued eastward towards Lockeford, California (northeast of the API). The SJ&SNR passed approximately 0.26 mile north of the API and had an east-west orientation that followed present-day SR 12. SPRR acquired the SJ&SNR in 1888, and it subsequently became known as the SPRR Valley Spring Branch (Hees n.d.). The segment of the former SPRR Valley Spring Branch in the vicinity of the API is no longer extant.

The road historically in the location of present-day SR 88 was depicted as one of the major thoroughfares in the Central Valley in maps from the mid-1880s (Hall 1886, 1887). It connected Stockton, Waterloo, and Lockeford with communities in the Sierra Nevada. A map from 1894 shows additional roads within the API, including East Harney Lane, Jack Tone Road, and East Kettleman Lane (USGS 2022). This trend of new road construction continued into the early twentieth century based on maps and aerials (NETROnline 2022; USGS 2022). The expanding road network during this time reflects the area's burgeoning agricultural industry, which increased settlement in the region. Roads as well as railroads were important movers of goods and people, and thus also aided the growth of the agricultural industry and prompted settlement along their alignments.

A third railroad reached Lodi during the early twentieth century: the Central California Traction Railroad (CCTR), which extends through the west end of the API. The portion of the line between Stockton and Lodi was completed in 1907, and the portion between Lodi and Sacramento was completed in 1910. The CCTR line currently is owned by Union Pacific Railroad and Burlington Northern Santa Fe Railroad (JRP Historical Consulting Services 2003).

With the establishment of transportation networks, the agricultural industry grew. In the 1890s, a local history described that "The land in the vicinity [of Lodi] is sandy and excellent for almost all kinds of crops. Watermelons have been a great specialty here for many years" (No author 1890). However, dry grains principally were farmed in San Joaquin County during the 1800s. In the Lodi area, alfalfa was identified as "King of Crops" (Martin 1904:22). Therefore, it is likely that nineteenth-century farmers in the API produced dry grains such as alfalfa, which required little in the way of irrigation (Caltrans 2007). During the early twentieth century, farmers in San Joaquin County increasingly began to diversify their crops, with the area surrounding Lodi becoming known for its wine grapes. Other farm goods in the area included olives, peaches, apricots, prunes, almonds, and figs, among others. Lodi thus featured six fruit packing sheds by 1906. Agricultural products grown in the API environs were shipped throughout California and the nation via the railroads that traversed the area. Orchards and vineyards continue to characterize the API to this day, reflecting the importance of the local agricultural industry (Martin 1904; No author 1890).

Property Name: 14496 North Vintage Road (Resource ID 33)

Page 4 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

The property at 14496 North Vintage Road Avenue is currently owned by Ione V. Taunton. Tax assessor records show the last deed transaction of the property dating to June 13, 2001. A 1911 county atlas shows the parcel in Section 17, Township 3 N, Range 7 E, owned by E. Ruppahn (historicmapworks.com 2023). The earliest aerial photograph of the area dates from 1957 and shows the area surrounding this property as agricultural with scattered residential and agricultural development. Research using Newspapers.com and Ancestry.com did not reveal any additional information about the property or its owners.

This property is previously unrecorded and unevaluated. The residence has a large one-story addition to the façade as well as replacement roofing, siding, windows, doors, and front porch. The property is evaluated below.

Evaluation

Under CRHR Criterion 1, this property has no significant associations with important historic events that have made a significant contribution to the broad patterns of local, regional, or national history. The property is related to rural residential development in Lodi during the early twentieth century. However, research did not reveal that the property played an important role in the agricultural or residential history of San Joaquin County. Therefore, the property at 14496 North Vintage Road is not eligible for the CRHR under Criterion 1.

Under CRHR Criterion 2, this property is not significant for any associations with the lives of persons important to history. Historical research has determined the property is currently owned by Ione V. Taunton. The residence does not appear to be associated with any significant achievements of any persons. Therefore, the property at 14496 North Vintage Road is not eligible for the CRHR under Criterion 2.

Under CRHR Criterion 3, this property has extensive modifications, including the façade addition, new roof, windows, siding, and doors. As a result, the property has lost its integrity of design, materials, and workmanship and is not eligible for the CRHR under Criterion 3.

Under CRHR Criterion 4, this property is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

Integrity

Location is the place where the historic property was constructed or the place where the historic event took place. The location of the property at 14496 North Vintage Road Avenue appears to have remained the same throughout its history. The integrity of the property's location remains intact.

Design is the combination of elements that create the form, plan, space, and style of a property. The design of this property has been jeopardized due to the large addition, new roofing, siding, windows, and doors.

Setting is the physical environment of a historic property. Aerial photographs from 1957 to 1984 show the neighboring residential properties in a very similar arrangement to what they are today. However, there is a visual incursion of two non-historic-era barns and one non-historic-era residence on the property which has diminished the integrity of setting.

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form a historic property. The materials of this property have been modified by the addition, new roofing, siding, windows, and doors. This has resulted in a diminishment of the integrity of materials.

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. The workmanship of the property has been affected by the aforementioned alterations.

CONTINUATION SHEET

Property Name: 14496 North Vintage Road (Resource ID 33)

Page 5 of 7

Recorded By: A. Reese

*Date January 2023

☒ Continuation ☐ Update

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. Although some modifications have occurred to the property, overall, it continues to convey the character of a rural property. Therefore, the property retains integrity of feeling.

Association is the direct link between an important historic event or person and a historic property. This property conveys its association as an early twentieth-century rural residence, despite changes.

In conclusion, the property at 14496 North Vintage Road does not meet any of the CRHR criteria and has lost integrity. Therefore, the property is not a historical resource for the purposes of CEQA.

Assessor's Parcel Number: 061-133-020

*P3a. Description:

The property at 7280 East Kettleman Lane is a rural residence and agricultural property consisting of a one-story Craftsman-style wood-frame house, one outbuilding over 45 years of age, and two modern-era outbuildings. The house has a rectangular footprint and a three-plane low-pitch front-gable roof sheathed in asphalt shingles. The roof has a deep overhang, decorative braces, and simple decorative gable ends. The house has a partial width covered porch, glazed wooden door, and clapboard siding. The roof of the porch is supported by battered wood columns resting on brick pedestals. A concrete walkway extends from East Kettleman Lane to the porch. A level lawn flanks the walkway. Behind (south) the house are the remaining portions of this 15-acre parcel are agricultural land. The outbuildings also are behind the house and are not visible from public vantage points. The property is set in an agricultural area of Lodi. It is in the Area of Potential Impacts (API) for the Northern San Joaquin 230-kilovolt Transmission Project and is recorded and evaluated in this form.
