Subject: FW: Routing power link through Carveacre Estates

Routing your Power Link through the pristine area of Carveacre Estates just doesn't make sense. It is surrounded by Cleveland National Forest. My family built a small cabin there in 1965 (3910 Carveacre Rd) in 1965 and utilizes the cabin frequently during Fall, Winter and Spring. The population in this area has increased tremendously since 1965. The vista in this area is beautiful and would be destroyed with your large power grid support structures. It is suggested that you select a less populated area for your power grid.
