This image presents a **Visual Simulation** of the proposed Project from **KOP 3** on **Leon Road**, just north of Holland Road. This simulation illustrates the replacement of the existing wood-pole line with a new wood-pole subtransmission line slightly to the east of the existing line. As shown in the simulation, the new facility will be structurally more complex (to carry the additional conductors) and noticeably taller (75 feet in height vs. 43 feet for the current poles). Also, light-weight steel poles would be used at the turn.
