This image presents a **Visual Simulation** of a portion of Segment 4 of the proposed El Casco transmission line, as viewed from Key Viewpoint 2 on Faircliff Street, just west of Finley Avenue on the Seneca Springs residential development in the City of Beaumont. This view is to the west-southwest and illustrates the replacement of the existing wood H-frame transmission line with a lightweight steel pole transmission line. As shown in the simulation, the number of structures would more than double in most views from residences.
