

A **visual simulation** of the Proposed Project from Key Viewpoint 5 on Faircliff Street, just west of Finley Avenue in the Seneca Springs residential development. This view is to the west-southwest along the route as it parallels the southern boundary of the residential development. The proposed subtransmission structures would be prominently visible from residences backing up to the right-of-way and residences across the street, on the north side of Faircliff Street. This view is typical of residential views in close proximity to the proposed route.
