**TALEGA-ESCONDIDO/VALLEY-SERRANO 500 KV INTERCONNECT**

**PROJECT**

**NOTICE OF APPLICATION FOR A CERTIFICATE OF PUBLIC  
CONVENIENCE AND PUBLIC NECESSITY**

**PROJECT: Talega–Escondido/Valley–Serrano 500 kv Interconnect Project**

**REFERENCE: CPUC Application No. 10–XX–XXX**

**Date:** \_\_\_\_\_

**1.0 Proposed Project:**

The Nevada Hydro Company proposes to construct a new approximately 32 mile, 500 kilovolt (“kV”) alternating current regional interconnection that would link Southern California Edison’s (SCE’s) Valley-Serrano 500 kV transmission line in western Riverside County with San Diego Gas & Electric Company’s (SDG&E’s) 230 kV Talega-Escondido transmission line in northern San Diego County. The project would connect between SCE’s existing Valley and Serrano substations at a new switchyard to be constructed at Lake, with a new substation to be constructed between SDG&E’s existing Talega and Escondido near Camp Pendleton, California, located approximately 9 miles west of the location of the Valley-Rainbow project previously proposed by SDG&E. For most of its route alignment, the project would be located within the Cleveland National Forest.

Operation of the proposed line would require that upgrades be made to some of SCE’s and SDG&E’s existing electrical transmission facilities in California. The proposed line and transmission facility upgrades are known as the Talega–Escondido/Valley–Serrano 500 kV Interconnect Project (“TE/VS Interconnect”). The TE/VS Interconnect will be constructed within a new right-of-way designated by the Federal Energy Regulatory Commission (“FERC”), the US Forest Service and the California Public Utilities Commission (“CPUC”). Construction of TE/VS Interconnect will add transmission facilities necessary to improve system reliability and import renewable energy into the San Diego basin.

**1.1 Transmission Line Facilities**

The TE/VS Interconnect will extend for about 32 statute miles (SM), generally running north to south through the Cleveland National Forest and linking SCE’s and SDG&E’s transmission systems. The upgraded 230 kV transmission line will extend for about 52 SM, generally running east to west between SDG&E’s existing Talega

substation (33000 Avenida Pico, San Clemente, San Diego County) and SDG&E's existing Escondido substation (2037 Mission Avenue, Escondido, San Diego County).

Final tower designs and specifications will be determined in cooperation with the California Independent System Operator ("CAISO") and with SCE and SDG&E. As now proposed, new 500 kV single-circuit transmission towers would be erected between SCE's existing Valley-Serrano transmission line and the Applicant's proposed new Case Springs substation adjacent to Camp Pendleton. Except where noted, typical four-legged transmission towers will be constructed of full galvanized lattice steel angle members connected with steel bolts. The structure would carry the electrical conductors in either a horizontal or delta configuration. Towers, which will generally vary in heights between 150 and 178 feet, will be located along the centerline of a new 500 foot wide right of way ("ROW") designated by FERC. The line's nominal rating will be 1,500 MW.

Transmission towers will consist of tangent (suspended) type structures, where the conductors approach and depart the structures in a straight line, and heavier structures, including both angle structures that suspend the conductors and allow limited changes in line direction and dead-end structures which allow for more substantial changes in line direction. Based on the nature of the existing terrain and requirements for adequate ground clearance, tower-to-tower spacing for new steel lattice towers will range between a minimum spacing of approximately 400 feet to a maximum spacing of about 1,600 feet. The exact quantity and placement of the transmission structures will be determined during the final design phase.

Typical structure foundations will require four to eight augured, cast-in-place concrete piles. The size and number of piles, which will vary based on the type of structure, load, and soil conditions encountered at each tower site, would be approximately three feet in diameter for the lattice structures planned (four foundations per structure). For the larger angle or dead-end structures, foundation holes would likely be larger in diameter because of the additional loads and tension.

With the exception of new transition towers and the adjoining towers located adjacent to the proposed Case Springs substation, an approximately 47 mile long second (double circuit) 230 kV transmission line (Talega-Escondido No. 2) will be constructed on and installed along existing support structures (already containing one 230 kV circuit) connecting SDG&E's Talega and Escondido substations. The conductor type for the second 230 kV circuit, between the Talega and Escondido substations, is proposed as 3M Company Composite Conductor Part Number 3M1033-T13, or equivalent, with the upgraded conductor nominally rated at 1,500 MW with overload at approximately 2,000 MW.

SDG&E's existing Talega-Escondido 230 kV transmission line was originally licensed and constructed using double circuit structures with only one circuit installed. The existing SDG&E 230 kV Talega-Escondido lines (Talega-Escondido No. 1) will be upgraded to loop in/out (adding a second conductor). An additional single circuit (Talega-Escondido No. 2) will be added to the existing spare tower steel pole supports,

extending in each direction. This re-conductoring and added circuit would bring the SDG&E 230 kV Talega-Escondido conductor rating to approximately 1,500 MW.

In order to accommodate the second conductor, it will be necessary to rebuild a 7.7 mile section (interconnecting SDG&E's existing Pala and Lilac substations) of the existing 69 kV transmission circuit on new 69 kV wood and steel pole structures adjacent to the existing 230 kV line within the existing 300 foot wide Talega-Escondido right-of-way. Subject to SDG&E specifications, the existing 7.7 miles of conductors used in the 69 kV circuit may remain on the 230 kV support structures and will be incorporated into the new 230 kV circuit.

In addition to the proposed short-tap, an approximately 2.7 mile segment of the proposed transmission line will be placed in an underground vault, rather than on overhead structures. The underground circuits are gas-insulated lines (GIL), rated at 4,000 amps (A) continuous and 63 kiloamps (kA) short circuit. transition stations between the GIL and the overhead line (OHL) will be constructed at the northern and southern terminus of the GIL vault.

Finally a new 115 kV Santa Rosa-Elsinore circuit will extend between the Applicant's new Santa Rosa Substation and SCE's existing 115 kV Elsinore Substation (Spring Street at Pottery Street, Lake Elsinore); and a new 115 kV Santa Rosa-Skylark circuit will extend between the Applicant's new Santa Rosa Substation and SCE's existing Skylark 115 kV Substation (Cordyon Street at Cereal Street, Lake Elsinore).

## **1.2 Substations**

New substations/switchyards will be constructed near the proposed points of juncture with SCE's existing transmission system on the north and SDG&E's existing transmission system on the south. In addition, a new substation will be constructed at roughly the midpoint between the two endpoints known as the Santa Rosa Substation. Each of the proposed substations/switchyards is described below.

### **1.2.1 Northern (Lake) substation.**

The northern connection and 500 kV switchyard will be located near Lee Lake (Corona Lake), in the unincorporated area of Alberhill in Riverside County. The new Northern (Lake) substation (500 kV and 13.8 kV station power) will be located on the northern side of the Interstate 15 (I-15) Freeway, in close proximity to SCE's existing 500 kV Valley-Serrano line. This new substation will occupy two pads with a total area of about 14 acres and consist of a new breaker and a half configuration. The loop in/out will be approximately half-way between SCE's existing Serrano substation (East Carver Lane, Orange, Orange County) and Valley substation (Menifee Road and Highway 74, Romoland, Riverside County).

### **1.2.2 Midpoint (Santa Rosa) substation.**

The new Midpoint substation will be located south of Grand Avenue in the unincorporated Lakeland Village area of Riverside County. The proposed substation will occupy an area of about 40 acres. The distance between the Lake substation and the Santa Rosa substation (500 kV, 115 kV ties) is about 12.7 SM.

The substation will serve two local 115 kV circuits reinforcing SCE's Skylark and Elsinore Substations. The approximate load is 100 MW per circuit, for a total of 200 MW of new load served. The load served is the Lake Elsinore area both incorporated and unincorporated Riverside County. In addition, two 12.5 kV circuits will provide a direct connection to the Elsinore Valley Municipal Water District (EVMWD) to provide for their pumping needs.

The proposed Santa Rosa substation will enclose a breaker and a half, 500 kV configuration. The primary components of the switchyard include a switchyard control building, circuit breakers and disconnect switches, switchyard buses and structures, and microwave/telecommunication facilities.

### **1.2.3 Southern (Case Springs) substation.**

The approximately 10 acre new Case Springs substation will be located within the right-of-way of the existing 230 kV transmission lines on publicly owned lands near the northern border of Camp Pendleton and the southern border of the CNF. The existing 230 kV transmission lines extend between SDG&E's existing Talega and Escondido substations. The distance between the new Case Springs substation (500 kV, 230 kV, 69 kV upgrades/voltage support) and the new Santa Rosa substation is about 16.5 SM. The new Southern substation will include flow control. Three phase-shifting transformers, sized for nominal operation at 25-30 degrees with a southern flow of 1,500 MW, are proposed.

## **2.0 Environmental Assessment:**

TNHC has prepared a Proponent's Environmental Assessment (PEA) which includes analysis of potential environmental impacts that could be created by the construction and operation of the proposed project. The PEA concludes that all potential environmental impacts associated with the proposed project would be mitigated to less than significant levels through the implementation of mitigation measures.

Associated with TNHC's PEA is the FEIS prepared by FERC.

## **3.0 EMF Compliance:**

The California Public Utilities Commission ("CPUC") requires utilities to employ "no cost" and "low cost" measures to reduce public exposure to electric and magnetic

fields (“EMF”). The TE/VS Interconnect is designed in accordance with the SCE "EMF Design Guidelines for New Electrical Facilities: Transmission Substation and Distribution", filed with the CPUC in compliance with CPUC Decision No. 93-1 1-01 3. TNHC will implement the measures for this project described in the Final Environmental Impact Statement prepared by FERC.

#### **4.0 Public Review Process:**

TNHC has applied to the CPUC for a Certificate of Public Convenience and Necessity for this project. Pursuant to the CPUC Rules of Practice and Procedure, any affected party may, within 30 days of the date on this notice, protest and request that the CPUC hold hearings on the application. If the CPUC as a result of its investigation determines that public hearings should be held, notice shall be sent to each person or entity who is entitled to notice or who has requested a hearing.

All protests must be mailed to the CPUC and TNHC concurrently and should include the following:

1. Your name, mailing address and day-time telephone number.
2. Reference to the CPUC Application Number and Project Name identified above.
3. A clear and concise description of the reason for the protest. Protests for this Application must be mailed within 30 CALENDAR DAYS to:

## **List of Newspapers Receiving Notice**

Section XI-A of General Order 131-D requires the applicant to notify the public of its filing “within ten days of filing the application,” by, among other means, newspaper advertisements “in the county or counties where the proposed facilities will be located,” plus at least one more advertisement in each publication a week later. TNHC is publishing notice in the following newspapers:

<b>Newspaper</b>	<b>Area Served</b>
Press-Enterprise	Riverside County
Orange County Register	Orange County
North County Times	San Diego County

## **Declaration of Posting**

I, Rexford Wait, on February 17, 2009, will re-post the Talega–Escondido/Valley–Serrano 500kv Interconnect Project route with the Notice of an Application for a Certificate of Public Convenience and Necessity with the California Public Utilities Commission in accordance with General Order 131-D, Section XI.A.3.

I declare under penalty of perjury that the foregoing statements are true and correct to the best of my knowledge.

Executed this \_\_\_\_ day of \_\_\_\_\_, 2010, at \_\_\_\_\_, California.
