Subject: sunrise powerlink

Sirs: I attended the meeting you held on February 26 2008 and I would like to say you did a great job. I have had thoughts for two years about this line and what it will do to the area.

1- is what benefits are the rate payers going to receive fro this line SDG&E say that well will get lower rates, but how can they be when they are going to need MORE MONEY to build new plants and re-wire San Diego area to except this line.

2-What will be our FINAL cost when this line and all the plants and infrastructure is completed.

3-What time from the start of a fire will we be able to fight it when we have to wait to the power is turned off in this line, with 50 mile an hour winds.

4- What would be the cost to restructure the existing plants compared to this powerlink.

5-What cost to rate payers for SOLAR/WIND power compared to this powerlink and why is SDG&E going back ward instead of forward in new green ideas.

6-SDG&E says that the EMF is less harmful on towers, Well it is still HARMFUL to land and people.

7-Will the plant in Mexicali need to be shut down if a larger QUAKE hits it's been hit twice this week. will we lose the power and have outages then with this reliable powerlink?

8-How do we fight the fires when we can't fly our planes because of wind? so we use ground crews which can't work under the towers. So when the planes are flying will we need two spotters one for other planes and one for the towers.

9-Sounds to that SDG&E are going to make a large profit ant the rate payers are going to get the TOWERS, lower property values, and a destroyed national park and landscape which is why we all moved here. last thought is

10- If SDG&E shuts down this Powerlink which is being built in the fire zone as in 2007 won't this cause massive power outages to the pumping stations which provide power for the water pumps and city electrical, so now we have a fire, no way to fight it because the water is off and power to run the pumps is off, 30,000 people are trying to evacuate on (2) one lane roads from a town that will burn to the ground along with a Historic town (JULIAN) because they will lose power also and SDG&E seems this is ok.

WE HAVE BEEN FIGHTING THIS FOR TWO YEARS AND EVERYONE THINKS IT'S A WAIST OF FUNDS AND NOT NEEDED WITH THE OTHER PROSPECTS AVAILABLE TO US AND IT STILL GOES ON WHY? My thought is that SDG&E are getting paid for this fight and only them, the home owners don't just up the rate, they probably think you folks at the commission and the little rate payers will get tired and go away and they will finally get the big

D0092

profit even though it doesn't work. They get profit if the Powerlink just hangs their which it will do. The powerlink will just sit for everyone to see how stupid this was and then it will be to late to change. PLEASE SAY NO TO THE POWERLINK. SDG&E has ruined enough country side as in Lakeside Ca. lets put a stop to it.

Thank You

DenisJames
