**Subject: Fwd: proposed Sunrise powerlink**

San Diego Smart Energy 2020 should be fully analyzed in the final EIR. It offers numerous alternatives to the costly and environmentally devastating proposed Sunrise powerlink. As a back country property owner and 20 year resident, I have been appalled at SDGE's championing of a powerlink that diminishes San Diego's chances for a thoughtful energy future based on renewables that are cost effective and in keeping with the long term energy plan adopted early in this decade by SANDAG and an across the board spectrum of community leaders. The draft EIR clearly stated that SDGE's proposed powerlink was far down the list of environmentally sustainable choices that meet San Diego's future energy needs.
