Subject: Fwd: opposition to the Central East Substation, Sunrise Power Link Project

I am concerned and oppose the Central East Substation, Sunrise Power Link Project. I own an acre and a half parcel in the San Felipe area and plan on building on this parcel. I purchased this land because of its isolation, environmentally rich and undisturbed surroundings. There are deer, wild turkeys, puma's and the usual smaller creatures. My area is covered with 200 year oak trees, which provide shade, nesting areas for many native bird species and sheer beauty. I do not want EMF power lines running over head. That would devastate the region I love so much. The mere fact that the lines will also attract repair personnel, inspectors and contaminate the air with constant line humming is very upsetting to me and unacceptable. Being from the city, I chose this land because of its serene natural beauty and because I found no where else where I felt so private, safe and one with nature.

I highly urge you to select a site that does not interfere with individuals who want a live style that is so hard to find in southern California, known as the back country.

Please consider another area void of people who love the high mountains and have made this place their home, for your EMF Power Link Project.
