Subject: Sunrise Powerlink Project Draft EIR/EIS

I strongly support the selection of the least environmentally impactful options for providing power to the San Diego Region, specifically options ranked 1, 2 and 3 in the Executive summary.

The I-8 alternative through Lakeside crosses the Cedar Fire burn area and is not a reliable link with less wildfire risk.

There is no reliable evidence provided that the alternative energy projects described as providing power to the Sunrise Powerlink will ever be built. No applications to the CPUC have been submitted in the past year since the power link was proposed.
