

Michael Clayton & Associates

The **existing view** to the northeast toward the San Felipe 500 kV to 230 kV Substation site, from northbound Split Mountain Road, just southwest of the substation site. The flat valley floor is backdropped by low hills to the immediate north with the angular forms of the Santa Rosa Mountains in the distant background. An existing simple wood-pole utility line and the existing San Felipe 92 kV Substation (out of view to the left) are visible as are several rural residences. In spite of the visible built features, the landscape is predominantly natural in appearance.
