

Michael Clayton & Associates

A **visual simulation** of the I-8 Alternative from Key Viewpoint 46 at the Plaster City West OHV staging area. This view is to the west and illustrates the I-8 Alternative adjacent and to the north of the existing SWPL Line as the route passes through the staging area. The new structures would share the same visual characteristics as the existing line (industrial character, complex structural forms and line, large scale), and would increase the overall prominence of the utility corridor. The new structures would be paired with the existing structures.
