

Michael Clayton & Associates

The **existing view** to the west toward the Route D Alternative route location, from Boulder Creek Road, approximately 8.8 miles north of the intersection with Oak Grove Drive. The existing landscape is predominantly natural appearing with a few, scattered rural residences that, in some areas, would be in close proximity to the Route D Alternative. Panoramic views of the surrounding ridges are unobstructed and there is minimal evidence of built infrastructure beyond a wood-pole transmission line that is located in close proximity to portions of Boulder Creek Road.
