

Source: South Bay Replacement Project AFC

A **visual simulation** of the South Bay Replacement Project (SBRP), from Brentwood Park, a residential mobile home development, located to the east of the site on the east side of I-5, between Moss Street and Palomar Street. The simulation illustrates the addition of the SBRP to the west of the development. The new plant would introduce prominent structures with substantial industrial character to a landscape presently absent such features. The facility would be visible over the tree line along the west side of the development.
