

Michael Clayton & Associates

A **visual simulation** of the In-Area All Source Generation Miramar Peaker Power Plant, located to the south of (behind) the buildings and trees in the image above. From this vantage point, only the upper portions of the peaker would be visible behind the buildings and trees. The peaker would not appear to be a prominent feature because of the screening provided by structures and trees and the surrounding commercial and industrial landscape character. Travelers on Miramar Road would not notice the facility because of the screening and the rate of travel on the road.

Key Viewpoint 75
In-Area All Source Generation
Peaker: Miramar
