

Michael Clayton & Associates

The **existing view** to the north toward the In-Area All Source Generation Pala Peaker site, from eastbound SR76. The peaker site would be on the flats in front of the hills shown in the image above. Adjacent to the site and just slightly to the west (left), out of the frame of view shown in the above image, is Pala Substation. Although there are several wood-pole and steel-lattice utility lines in the vicinity of the site, much of the surrounding rural landscape is natural in appearance.

**Key Viewpoint 76**  
In-Area All Source Generation  
Peaker: Pala
