A **visual simulation** of the Modified Route D Alternative Option A crossing the mouth of Hauser Canyon and paralleling an existing wood-pole transmission line. This simulation illustrates the lattice structures in an olive drab color (except for the furthest, ridge-top structure shown in a dark gray galvanized color) per USFS requirements and Mitigation Measure V-45a. Cleared structure pads are also shown. As illustrated in the simulation, the painted structures substantially blend with a dark, mottled background though they would appear prominent when backdropped by the sky.
