

The **existing view** to the northeast from Key Viewpoint 86 on a private access road that parallels the existing 69 kV transmission line across a small section of Cleveland National Forest, just southeast of State Route 78. As shown in the image above, the landscape is open and views are unobstructed and reflect the recent loss of vegetation due to the Witch Creek fire. This portion of the national forest is fairly remote from public access points, though there are unimproved roads into the area from adjacent private ranches.
