

Michael Clayton & Associates

The **existing view** to the east toward proposed structure location SP133 (closest), from Old Kane Springs Road, approximately 0.8 mile east of its junction with SR 78. The vertical forms of an existing 92 kV wood pole transmission line are visible paralleling Old Kane Springs Road to the south (right). The flat, horizontal form of West Mesa is the dominant landform feature. A northeast spur ridge of the Vallecito Mountains is also visible in the right side of the image.
