

Michael Clayton & Associates

A **visual simulation** of the Partial Underground 230 kV ABDSP SR 78 to S2 Alternative San Felipe 500 kV to 230 kV Substation from north-bound Split Mountain Road. This viewpoint is just southwest of the substation site. The view is to the northeast and captures a portion of South Borrego Valley, immediately to the east and south of the existing San Felipe 92 kV Substation. The substation would be prominently visible to travelers on Split Mountain Road and nearby residents. The new facility would contrast with the predominantly natural appearing landscape.
