

A **visual simulation** of the In-Area All Source Generation Pala Peaker site from eastbound SR76. This view to the north encompasses the Pala Peaker Power Plant, which would be prominently visible on the flats in front of ridge in the center of the image above. Although there are a number of built energy facilities visible in the landscape, the peaker would contribute substantial additional industrial character into the predominantly natural appearing landscape.

Key Viewpoint 76
In-Area All Source Generation
Peaker: Pala
