Subject: Bury the lines!!!!!!

To whom it may concern,

A couple of months ago someone who worked for aspen(independent contractor) came to my door and said that he wanted to take some pictures of the power-line in my backyard. Today I was informed that none of those pictures were in the report from Aspen. I am very offended by that and think that this report was done in a very unprofessional manner. These lines have a big negative impact on our property values.

43-1

43-2

This is not even taking into consideration the health aspect of it. These lines are way to close and are bound to have a negative impact on our health. I find this report to be unacceptable and am sure many neighbors share the same sentiment.

43-3

Also, the people that go to Flo-Jo Park should not be subjected to all that exposure to the lines. I don't think the health of this many people should be ignored. All the people who live close to the line strongly support burying the lines and will fight until it is accomplished! Bury those lines!!!!!!!!!

43-4

Put them where they belong, Underground!!!

Sincerely,
Onofrio Damato

43-1   While gathering necessary baseline information to perform the environmental analysis contained in the MND/IS, many more pictures were taken than could be included in the document. Each visual simulation is expensive to perform and reproduce; therefore, a few views were selected to be representative of the varying viewpoints along the right-of-way.

43-2   Please see General response GR-2 regarding property values.

43-3   For information addressing EMF please see General Response GR-1.

43-4   Please see General Response GR-3 for information regarding the undergrounding of electrical transmission lines, as well as Appendix 8, which discusses various route options considered by the CPUC.
