

Source: Southern California Edison

A visual simulation of the proposed project from Key Viewpoint 8 from a residential driveway on the east side of Wayside. This view encompasses the proposed 66 kV H-Frames HF-06 and -07, as well as the existing 220 kV towers M21-T2 and -T3. As shown in the simulation, the proposed structures would appear larger than the existing 66 kV poles, but still smaller than the existing 220 kV towers.
