Re: Data Request #12 for the SCE West of Devers Upgrade Project - Application No. A.13-10-020

Dear Mr. Stevenson:

The California Public Utilities Commission's (CPUC) Energy Division has reviewed all of the documents and materials that SCE has provided, including the Application and Proponent's Environmental Assessment (PEA; dated October 25, 2013), the PEA deficiency response items submitted in late 2013 and early 2014, and SCE's data responses to date. During the analysis of the aforementioned materials, we have identified additional information items needed from SCE.

Attached please find Data Request No. 12, with a follow-up to SCE's responses to PEA Completeness Review Items #4 and 16. Additional data requests may be necessary to address other CEQA or NEPA topics as we move forward with EIR/EIS preparation.

We would appreciate your prompt responses to these data requests, which will allow us to maintain our current schedule. Given our desire to maintain an aggressive schedule, we request that responses be provided to us within one week if possible (by January 16, 2015). If this is not possible, please provide me with an estimated response date for any information that can't be provided within a week.

Please submit one set of responses to me in both hard copy and electronic format and one to Susan Lee at Aspen Environmental Group in electronic format (unless there are hardcopy-only documents). Any questions on this data request should be directed to me at (415) 703-2068.

Sincerely,

Billie Blanchard

Billie Blanchard

SCE West of Devers Upgrade Project Data Request No. 12

- PD-30** To date, the CPUC has received three Excel files of the preliminary FAA hazard marking evaluations on SCE preliminary engineering in response to PEA Completeness Item #16a (emails dated January 25 and August 22, 2014). The tables submitted in January 2014 contain the old structure numbers prior to the design “refresh,” and the submittal in August 2014 contains 15 structures that were originally missing. In order to include these results in the EIR/EIS, please resubmit the tables merged into one complete file with the structure numbers updated to the current structure numbers. Please also confirm that the design refresh did not result in any changes to the filing requirements or airspace hazard determinations.
- PD-31** In our version of the structure heights table originally submitted in response to PEA Completeness Item #4A and updated as part of the design “refresh,” several of the structure numbers in Segment 1 are not correct due to strange Excel formatting. Please check SCE’s version of the table and resubmit the structure heights table showing all Segment 1 structures with correct/current structure numbers.
