DATA REQUEST SET A.13-10-020 WODUP ED-SCE-12

To: ENERGY DIVISION
Prepared by: Scott Lacy, PE
Title: Project Engineer
Dated: 01/09/2015

Question PD-31:

In our version of the structure heights table originally submitted in response to PEA Completeness Item #4A and updated as part of the design “refresh,” several of the structure numbers in Segment 1 are not correct due to strange Excel formatting. Please check SCE’s version of the table and resubmit the structure heights table showing all Segment 1 structures with correct/current structure numbers.

Response to Question PD-31:

SCE did not submit the structure height table being referenced, as it was extracted by an Aspen GIS technician from the GIS datasets provided by SCE in July and August 2014. Because the structure construction numbering scheme used for Segment 1 structures uses an "E" in the middle of the identifier for the towers on the east side of the corridor, Excel treats those identifiers as "Numbers" and converts the display to scientific notation. If that Excel field is redefined as "Text," then the formatting will appear correct.

In addition, SCE recommends that when this data is extracted from the GIS, the field "Str_Class" should be selected in lieu of using the field "Str_Type." This will result in more user-friendly information showing results such as "TSP" or "LST" instead of results such as "DE," "WY1," or "WCR1" and such.
