TABLE 3-1 SUMMARY OF ACCESS ROAD REQUIREMENTS (ENTIRE PROJECT)

| TYPE OF ROAD | DESCRIPTION | TEMPORARY IMPACTS | PERMANENT IMPACTS |
| :---: | :---: | :---: | :---: |
| Temporary Access Roads | 12-foot-wide access road for temporary overland constructionrelated activities; these roads would not be required for operation of proposed Project. These roads would be rehabilitated to existing conditions following construction. | 0.479 acres | -- |
| Environmentally Sensitive Areas | Temporary overland access roads. Use of geomats, temporary wood construction pads, portable road platforms, or other methods, as determined during final engineering. | 1.375 | -- |
| Existing Road to Lassen Substation | Existing road that requires upgrades to be utilized for construction, operation and maintenance of the proposed Project. | -- | 0.153 acre |
| New Roads | 12-foot-wide access road for operation and maintenance of the Lassen Substation. | -- | 0.154 |

Table 3-2 provides a summary of the temporary and permanent typical pole/tower installation impacts.
TABLE 3-2 SUMMARY OF TYPICAL POLE/TOWER INSTALLATION IMPACTS

| WOOD POLE STRUCTURE INSTALLATION | TEMPORARY IMPACTS | PERMANENT IMPACTS |
| :---: | :---: | :---: |
| Permanent Footprint per transmission pole Pole Diameter 19 inches Auger Hole Depth 10 to 11.5 feet | -- | 1.969 sq ft per pole total 74.820 sq ft |
| Average Work Area Around each pole (for pole removal and installation) |  |  |
| Transmission lines per pole Distribution per pole | $2,500 \mathrm{sq}$ ft per pole total $95,000 \mathrm{sq} \mathrm{ft}$ | -- |
|  | $2,500 \mathrm{sq}$ ft per pole total $62,500 \mathrm{sq} \mathrm{ft}$ | -- |
| Total Work Area | 2,500 sq ft total 157,500 | -- |
| Total Permanent Footprint for Transmission Poles | -- | 0.002 acres |
| Pulling/Tensioning Areas (entire project/including transmission \& distribution) | 2.066 acres | -- |

Two distribution poles will be replaced on each side of I-5 to support the proposed overhead distribution (Pole \#161406 at the end of Jesse Street and Pole \#162400 on Willow Street. Each of these locations would result in approximately 2,500 sq. ft . of temporary impacts during construction around each pole work area. No permanent impacts would occur.

The following table provides the estimated work area disturbance around the proposed underground lines It is assumed for the proposed underground lines that the trench would be approximately 4 -ft wide and 6 - to 8 -ft. deep with an approximate 20 ft -wide temporary construction impact area.

|  |  | DESCRIPTION OF TEMPORARY WORK | TEMPORARY WORK AREA (SQ FT) | TEMPORARY AREA (ACRES) | WORK |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Underground | Proposed | Senior Apartment | 24,798.63 |  | 0.569 |
| Underground | Proposed | bottling plant | 16,791.88 |  | 0.385 |
| Underground | Proposed | New Substation | 12,017.17 |  | 0.276 |
