Chapter 1. Executive Summary

This section provides an executive summary of the Transportation Impact Analysis through a set of frequently asked questions (FAQs).

Where is the project located and what would be developed?

The Mesa Substation site is located north of SR 60, south of Potrero Grande Drive between Markland Drive and Greenwood Avenue in the City of Monterey Park in Los Angeles (LA) County. With the proposed project, the existing 220-kV substation would be demolished and replaced with the proposed 500-kV substation over three construction phases anticipated to take place over the next 55 months.

The associated components of the Proposed Project include:

- Removal, relocation, modification, and/or construction of transmission, subtransmission, distribution, and telecommunications structures within the cities of Monterey Park, Montebello, Rosemead, South El Monte, and Commerce, and in portions of unincorporated Los Angeles County.
- Conversion of an existing street light source line from overhead to underground between three street lights on Loveland Street within the City of Bell Gardens.
- Installation of a temporary 220 kV line loop-in at Goodrich Substation within the City of Pasadena.
- Minor internal modifications within the existing fenced perimeter of multiple existing substations throughout the Electrical Needs Area (ENA) and at Mira Loma, Pardee, and Vincent Substations, which are not in the ENA.

Following are descriptions of the major components outside of Mesa Substation and the adjacent transmission rights-of-way (ROWs).

Three telecommunications lines would be installed and one would be rerouted as part of the Proposed Project within the cities of Monterey Park and Montebello, and in portions of unincorporated Los Angeles County. The first telecommunications cable would connect Mesa Substation to a transmission tower located southeast in unincorporated Los Angeles County. The proposed telecommunications route would exit Mesa Substation, travel east on Potrero Grande Drive, and continue south along Hill Drive and San Gabriel Boulevard, before transitioning east to an existing SCE fee-owned ROW, just south of Darlington Avenue.

The second telecommunications line would connect Mesa Substation to an existing transmission tower also located in unincorporated Los Angeles County. The route would exit Mesa Substation in a southeasterly direction, cross SR-60, and continue along Montebello Boulevard. The route would then travel east along Avenida De La Merced and continue northeast along Lincoln Avenue, before heading southeast on Durfee Avenue.

The third telecommunications line would be rerouted between Mesa Substation and Harding Substation, located south of Mesa Substation in the City of Montebello. The reroute would exit Mesa Substation, travel west on Potrero Grande Drive, and continue in a southerly direction on Markland Drive, before crossing SR-60 and continuing westerly on Via Campo. The route would then head southwesterly along an existing SCE ROW and would continue in a southerly direction along Wilcox Avenue before heading east on Lincoln Avenue and connecting to existing facilities near Harding Substation.

Within the City of Commerce, an existing transmission tower would be replaced within an SCE fee-owned ROW. This tower is approximately 2.4 miles southwest of Mesa Substation and approximately 2.1 miles north of Laguna Bell Substation.

A street light source line would be converted from overhead to underground between three street lights on Loveland Street within the City of Bell Gardens, approximately 0.2 mile south of Laguna Bell Substation.

Finally, a temporary 220 kV line loop-in would be installed at Goodrich Substation within SCE's adjacent ROW in the City of Pasadena, approximately 7.2 miles north of Mesa Substation.

What existing public streets will serve the project and where is access proposed?

The Mesa Substation site is served by SR 60, Potrero Grande Drive, Markland Drive, San Gabriel Boulevard, Paramount Boulevard, and Hill Drive, which are the six primary roadways within the surrounding area and would serve project traffic at Mesa Substation. Vehicular access is proposed via one full access driveway along Potrero Grande Drive for phases 1 and 3. During phase 2, vehicular access is proposed via one full access driveway along Potrero Grande Drive and one right-in/right-out driveway on Markland Drive.

Other components of the project are served as follows. Within the vicinity of two new telecommunications routes, Potrero Grande Drive, Darlington Avenue, Avenida de la Merced, Lincoln Avenue, Durfee Avenue Markland Drive, and Via Campo are local public streets that run east-west; Hill Drive, San Gabriel Boulevard, Montebello Boulevard, and Wilcox Avenue are local public streets that run north-south. Within the vicinity of the proposed tower replacement north of Laguna Bell Substation, Washington Boulevard, Tubeway Avenue and Saybrook Avenue run east-west. Telegraph Road and Garfield Avenue run north-south. In the vicinity of the proposed street light source line undergrounding, Slauson Avenue, Gage Avenue, and Loveland Street run east-west. Garfield Avenue, Darwell Avenue, and Toler Avenue run north-south. Within the vicinity of Goodrich Substation, Foothill Boulevard and Orange Grove Boulevard are local public streets that run east-west; Sierra Madre Boulevard, Sunnyslope Avenue, and Sierra Madre Villa run north-south. In addition, Maple Street would provide access within the Proposed Project area.

Is the site currently served by public transit?

The site is currently served minimally by public transit, with a bus stop located along Via Campo. The nearest bus stop along Via Campo, west of Vail Avenue, is approximately one mile southwest (approximately a 20-minute walk) from the project site access location along Potrero Grande. The stop is approximately one-quarter mile (approximately a 6-minute walk) from the project site access located along Markland Drive. Additionally, the area is served by the City of Monterey Park Spirit Bus with a stop located at the Atlas Avenue/Saturn Street intersection, approximately ½ mile from the proposed access along Potrero Grande Drive.

How many vehicular trips would the project generate and what are the project's traffic volumes during the a.m. and p.m. peak hours of commute traffic?

Daily traffic is defined as traffic that would occur during a 24-hour period. Peak hour traffic is defined as the peak one hour (e.g., 7:30 – 8:30 AM) and 4:00 – 5:00 PM) of traffic during the two-hour a.m. (7-9 AM) and p.m. (4-6 PM) peak commute periods. The proposed project is anticipated to be constructed over 55 months in three phases. Phase 1 is anticipated to generate 2,144 daily trips with 202 occurring during the AM peak hour and 453 during the PM peak hour. Phase 1 is anticipated to be completed by the 4th quarter of 2018. Phase 2 is anticipated to be completed by the 1st quarter of 2019 and is anticipated to generate 789 daily trips with 72 trips occurring during the AM peak hour and 217 trips during the PM peak hour. The 3rd phase is anticipated to generate approximately 1,086 daily trips with 105 during the AM peak hour and 200 during the PM peak hour. Phase 3 is anticipated to be completed

by the 4th quarter of 2020. Other components of the project will generate few AM and PM trips; therefore traffic impacts are not analyzed in detail in this TIA.

What transportation impacts are anticipated, if any?

Temporary traffic impacts are anticipated at some of the study intersections that serve the Mesa Substation site.

What measures are proposed to reduce or control traffic impacts?

Mitigation measures to be provided by CPUC's environmental consultant.

Chapter 2. Introduction

The purpose of this Transportation Impact Analysis (TIA) is to identify potential traffic-related impacts associated with the peak construction phases of the three development phases of the Southern California Edison (SCE) Mesa Substation site (proposed project). Traffic-related impacts from the proposed project would be temporary, and would be removed from the study area by the time the proposed project is fully constructed and is in its permanent operations phase.

Project Description

The project site is located north of SR 60, south of Potrero Grande Drive between Markland Drive and Greenwood Avenue in the City of Monterey Park (City) in Los Angeles (LA) County (County) as shown on Figure 1. The existing 220-kV substation would be demolished and replaced with the proposed 500-kV substation. There is a single driveway along Potrero Grande Drive that serves all construction vehicles trips associated with the construction of the facility for all phases. Phase 2 of the project would have an additional access location along Markland Drive. Figure 2 shows the site vicinity and study intersections, as well as, the other associated project components. Figure 3 shows the preliminary site plan of the proposed Mesa Substation.

The associated components of the Proposed Project include:

- Removal, relocation, modification, and/or construction of transmission, subtransmission, distribution, and telecommunications structures within the cities of Monterey Park, Montebello, Rosemead, South El Monte, and Commerce, and in portions of unincorporated Los Angeles County.
- Conversion of an existing street light source line from overhead to underground between three street lights on Loveland Street within the City of Bell Gardens.
- Installation of a temporary 220 kV line loop-in at Goodrich Substation within the City of Pasadena.
- Minor internal modifications within the existing fenced perimeter of multiple existing substations throughout the Electrical Needs Area (ENA) and at Mira Loma, Pardee, and Vincent Substations, which are not in the ENA.

Following are descriptions of the major components outside of Mesa Substation and the adjacent transmission rights-of-way (ROWs).

Three telecommunications lines would be installed and one would be rerouted as part of the Proposed Project within the cities of Monterey Park and Montebello, and in portions of unincorporated Los Angeles County. The first telecommunications cable would connect Mesa Substation to a transmission tower located southeast in unincorporated Los Angeles County. The proposed telecommunications route would exit Mesa Substation, travel east on Potrero Grande Drive, and continue south along Hill Drive and San Gabriel Boulevard, before transitioning east to an existing SCE fee-owned ROW, just south of Darlington Avenue.

The second telecommunications line would connect Mesa Substation to an existing transmission tower also located in unincorporated Los Angeles County. The route would exit Mesa Substation in a southeasterly direction, cross SR-60, and continue along Montebello Boulevard. The route would then travel east along Avenida De La Merced and continue northeast along Lincoln Avenue, before heading southeast on Durfee Avenue.

The third telecommunications line would be rerouted between Mesa Substation and Harding

Substation, located south of Mesa Substation in the City of Montebello. The reroute would exit Mesa Substation, travel west on Potrero Grande Drive, and continue in a southerly direction on Markland Drive, before crossing SR-60 and continuing westerly on Via Campo. The route would then head southwesterly along an existing SCE ROW and would continue in a southerly direction along Wilcox Avenue before heading east on Lincoln Avenue and connecting to existing facilities near Harding Substation.

Within the City of Commerce, an existing transmission tower would be replaced within an SCE fee-owned ROW. This tower is approximately 2.4 miles southwest of Mesa Substation and approximately 2.1 miles north of Laguna Bell Substation.

A street light source line would be converted from overhead to underground between three street lights on Loveland Street within the City of Bell Gardens, approximately 0.2 mile south of Laguna Bell Substation.

Finally, a temporary 220 kV line loop-in would be installed at Goodrich Substation within SCE's adjacent ROW in the City of Pasadena, approximately 7.2 miles north of Mesa Substation. The components outside of Mesa Substation are not expected to generate daily traffic impacts during the AM and PM peak hours; therefore traffic impacts are not analyzed in detail in this TIA.

It is anticipated that the project would be constructed in three phases between 2016 and 2020, and would be operational by 2020. It is anticipated that Phase 1 would be completed between the 2nd quarter of 2016 and the 4th quarter of 2018. Phase 2 would be completed between the 2nd quarter of 2018 and the 1st quarter of 2019 and phase 3 would be completed between the 1st quarter of 2019 and the 4th quarter of 2020. Additionally, post construction testing would be completed through the 2nd quarter of 2021. Analysis years were selected based on the anticipated peak construction traffic for each phase based on the projected construction schedule.

Study Area and Scope

The study area and scope were based on all potential construction traffic routes to/from the substation site. These routes consisted of roadway facilities traversing through a number of jurisdictions including the Cities of Monterey Park, Montebello, and Rosemead; and, portions of unincorporated LA County. The project scope was also coordinated with the California Public Utilities Commission (PUC), Energy Division.

This analysis focuses on the weekday AM (7:00 to 9:00 a.m.) and PM (4:00 to 6:00 p.m.) peak periods. These periods represent the highest cumulative total traffic for the adjacent street system. Only the construction phases of the proposed project have been evaluated since the permanent operations of the project would generate nominal peak hour trips. The existing roadways include:

1. Potrero Grande Drive
2. Markland Drive
3. Greenwood Avenue (Saturn Street)
4. Hill Drive (Del Mar Avenue)
5. Paramount Boulevard
6. San Gabriel Boulevard
7. Neil Armstrong Street
8. Town Center Street
9. Garfield Avenue
10. Via Campo
11. Wilcox Avenue

12. Pomona Boulevard
13. Town Center Drive
14. Montebello Boulevard
15. Walnut Grove Avenue

The study intersections, roadway segment, and freeway mainline segments (and their respective jurisdictions) include:

1. Garfield Avenue/Pomona Boulevard (City of Montebello)
2. Garfield Avenue/Via Campo (City of Montebello)
3. Wilcox Avenue/Pomona Boulevard (City of Montebello)
4. Wilcox Avenue/Via Campo (City of Montebello)
5. Markland Drive/Via Campo – SR 60 EB On-Ramp (City of Montebello)
6. Markland Drive/Potrero Grande Drive/SR 60 WB Off-Ramp (City of Monterey Park)
7. Greenwood Avenue – Saturn Street)/Potrero Grande Drive (City of Monterey Park)
8. Del Mar Avenue (Hill Drive)/Potrero Grande Drive (LA County)
9. Paramount Boulevard/Hill Drive (LA County)
10. Paramount Boulevard/SR 60 WB Ramps – Neil Armstrong Street (City of Montebello)
11. Paramount Boulevard/SR 60 EB Ramps – Town Center Drive (City of Montebello)
12. SR 60 EB Ramps – Montebello Boulevard/Montebello Town Center (City of Rosemead)
13. Walnut Grove Avenue/San Gabriel Boulevard (City of Rosemead)
14. San Gabriel Boulevard/SR 60 WB Ramps (City of Rosemead)
15. San Gabriel Boulevard/Montebello Town Center (City of Rosemead)
16. Potrero Grande Drive, Markland Drive to Greenwood Avenue (City of Monterey Park)
17. SR 60, west of Garfield Avenue (Caltrans)
18. SR 60, Garfield Avenue to Paramount Boulevard (Caltrans)
19. SR 60, Paramount Boulevard to San Gabriel Boulevard (Caltrans)
20. SR 60, east of San Gabriel Boulevard (Caltrans)

The study intersections were analyzed for the following seven study scenarios:

- Existing Conditions
- Forecast Year 2016 Without-Project Construction Traffic
- Forecast Year 2016 With-Project Phase 1 Construction Traffic
- Forecast Year 2018 Without-Project Construction Traffic
- Forecast Year 2018 With-Project Phase 2 Construction Traffic
- Forecast Year 2019 Without-Project Construction Traffic
- Forecast Year 2019 With-Project Phase 3 Construction Traffic

The forecast years were selected based on the highest anticipated construction traffic associated with that phase. In the instance of phase 1, the phase is anticipated to be completed between the 2nd quarter of 2016 and the 4th quarter of 2018 with the highest construction related traffic occurring during 2016. Similarly, the highest construction traffic associated with phase 2 is anticipated to occur during 2018, and the highest construction traffic associated with phase 3 is anticipated to occur during 2019.

The report first describes existing and future (2016, 2018, and 2019) without-project construction traffic in the vicinity of the project site. This includes the street system, existing and future without-project weekday AM and PM peak hour traffic volumes, traffic operations, non-motorized facilities, and transit service. Then, future 2016, 2018 and 2019 with-project Phases 1, 2, and 3 peak construction conditions, respectively, are then described. The project's temporary impacts on the surrounding transportation system were identified by comparing the future with-project conditions to the future without-project conditions.

Methodology

Passenger Car Equivalent (PCE) Factor

To properly assess the truck traffic generated by the various construction phases of the proposed project against intersection capacity during the AM and PM peak commute hours, which contain primarily passenger cars, a Passenger Car Equivalence (PCE) factor was applied to all trucks generated by the proposed project. A PCE factor of 2.0 was applied to 2 or 3 axle medium trucks (i.e., one medium truck is equivalent to two passenger cars) such as the concrete trucks or dump trucks without trailers. A PCE factor of 3.0 was applied to trucks with 4 axles or more including semi-trucks with trailers.

Intersections

Per the City of Monterey Park and Montebello Traffic Impact Study Guidelines, study intersections were analyzed for weekday AM and PM peak hour levels of service (LOS). The ICU (Intersection Capacity Utilization) was used to determine intersection LOS for signalized intersections. The *Highway Capacity Manual (*HCM 2010) was used for stop controlled intersections. The ICU method determines the volume-to-capacity (V/C) ratio on a critical lane basis and LOS associated with each V/C ratio at an intersection and was evaluated using *Traffix 8*. The HCM 2010 method determines the vehicle delay in seconds at stop controlled intersections and is reported for the worst movement.

Additionally, weekday AM and PM peak hour traffic operations for On/Off Ramps with SR 60 were evaluated based on the procedures identified in HCM 2010, consistent with Caltrans requirements, and were evaluated using the *Synchro 9* software program. Queuing at site access driveways was evaluated using the *Sim Traffic 9* software program.

The degree of congestion at an intersection is described by the level of service, which ranges from LOS A to LOS F, with LOS A representing free-flow conditions with little delay and LOS F representing over-saturated traffic flow throughout the peak hour. A complete description of the meaning of level of service can be found in the Highway Research Board Special Report 209 (HCM 2000). Brief descriptions of the six levels of service for signalized intersections are shown in Table 1 and Table 2 provides detailed descriptions of each level of service.

Table 1. Level of Service Definitions for Intersections

	ICU Methodology	HCM 2010 Methodology
Level of Service	V/C Ratio	Delay[1]
A	≤0.60	0 – 10
B	0.61 to ≤ 0.70	>10 – 15
C	0.71 to ≤ 0.80	>15 – 25
D	0.81 to ≤ 0.90	>25 – 35
E	0.91 to ≤ 1.00	>35 – 50
F	>1.00	>50

Source: *Highway Capacity Manual*, Transportation Research Board, 2010.
1. Average delay per vehicle in seconds.

Table 2. Level of Service Criteria Descriptions

Level of Service	Description
A	No approach phase is fully utilized by traffic, and no vehicle waits longer than one red indication. Typically, the approach appears quite open, turns are made easily, and nearly all drivers find freedom of operation.
B	This service level represents stable operation, where an occasional approach phase is fully utilized and a substantial number are nearing full use. Many drivers begin to feel restricted within platoons of vehicles.
C	This level still represents stable operating conditions. Occasionally drivers may have to wait through more than one red signal indication, and backups may develop behind turning vehicles. Most drivers feel somewhat restricted, but not objectionably so.
D	This level encompasses a zone of increasing restriction approaching instability at the intersection. Delays to approaching vehicles may be substantial during short peaks within the peak period; however, enough cycles with lower demand occur to permit periodic clearance of developing queues, thus preventing excessive backups.
E	Capacity occurs at the upper end of this service level. It represents the most vehicles that any particular intersection approach can accommodate. Full utilization of every signal cycle is seldom attained no matter how great the demand.
F	This level describes forced flow operations at low speeds, where volumes exceed capacity. These conditions usually result from queues of vehicles backing up from a restriction downstream. Speeds are reduced substantially, and stoppages may occur for short or long periods of time due to the congestion. In the extreme case, both speed and volume can drop to zero.

Source: *Highway Capacity Manual*, Transportation Research Board, 2010.

Construction Routes

Construction routes were based on existing counts and anticipated travel patterns. Different travel patterns are associated with worker trips, off-site worker trips, and the truck trips. The anticipated worker trip distribution is shown in Figure 9. The anticipated off-site worker distribution is based on the location of the two off-site staging areas and the distribution is shown on Figure 10. The truck trip distribution is anticipated to be more regional and is assigned 50 percent to the west and 50 percent to the east along SR 60. The truck trip distribution was developed utilizing designated truck routes with the exception of Hill Drive and Paramount Boulevard which will be treated as a temporary truck route. The truck trip distribution is shown on Figure 11.

Chapter 3. Area Development

This section describes existing and proposed land uses near the project site.

Existing Land Uses

The existing site is surrounded by industrial and office land uses to the north, State Route (SR-) 60 to the south, a cemetery to the northeast, and commercial and low-density residential land uses to the northwest. A large retail shopping center development (the Monterey Park Market Place) is currently in the entitlement phase and is proposed to be located directly southeast of the proposed site (north of SR 60).

Proposed Land Uses

Many of the proposed developments in the area are consistent with the existing land uses and typically include mixed-use developments. Twelve cumulative projects were noted in the area and the land use and size is summarized in Table 3.

Table 3. Proposed Land Uses

Location	Land Use	Size
City of Rosemead		
7801-7825 Garvey Avenue	Apartment (LU #220)	60 du
	Shopping Center (LU #820)	15.553 ksf
8408 Garvey Avenue	Apartment (LU #220)	46 du
	Shopping Center (LU #820)	11.5 ksf
8479 Garvey Avenue	Apartment (LU #220)	28 du
	Shopping Center (LU #820)	11.375 ksf
7419-7459 Garvey Avenue	Super Market (LU #850)	24 ksf
	General Office (LU #710)	24 ksf
Walnut Grove Avenue & Rush Street	Hotel (LU#310)	80 rooms
City of Monterey Park		
The Market Place	Shopping Center (LU #820)	600 ksf
2015 Potrero Grande	Single Family Home (LU #210)	80 du
500 Markland Drive	Mini-Warehouse (LU #151)	124.492ksf
Monterey Park Towne Center	Apartment (LU #220)	109 du
	Shopping Center (LU #820)	71.366 ksf
City of Montebello		
Montebello Hills Master Planned Community	Single Family Home (LU #210)	237 du
	Condo/Townhome (LU #230)	521 du
	City Park	5.5 acres
888 Montebello Boulevard	Hotel (LU#310)	54 rooms
LA County		
1264 San Gabriel Boulevard[4]	Condo/Townhome (LU #230)	20 du

du = dwelling unit, ksf = thousand square feet

Chapter 4. Existing Street System (Baseline/2015)

This section describes existing and future (2016, 2018 and 2019) without-project conditions within the identified study area. Characteristics are provided for the roadway network, peak hour traffic volumes, traffic operations, traffic safety, non-motorized facilities, and transit.

Street System

The following describes the existing street network within the vicinity of the proposed project and anticipated changes resulting from planned improvements. The study intersections include:

1. Garfield Avenue/Pomona Boulevard
2. Garfield Avenue/Via Campo
3. Wilcox Avenue/Pomona Boulevard
4. Wilcox Avenue/Via Campo
5. Markland Drive/Via Campo – SR 60 EB On-Ramp
6. Markland Drive/Potrero Grande Drive/SR 60 WB Off-Ramp
7. Greenwood Avenue – Saturn Street)/Potrero Grande Drive
8. Del Mar Avenue (Hill Drive)/Potrero Grande Drive
9. Paramount Boulevard/Hill Drive
10. Paramount Boulevard/SR 60 WB Ramps – Neil Armstrong Street
11. Paramount Boulevard/SR 60 EB Ramps – Town Center Drive
12. SR 60 EB Ramps – Montebello Boulevard/Montebello Town Center
13. Walnut Grove Avenue/San Gabriel Boulevard
14. San Gabriel Boulevard/SR 60 WB Ramps
15. San Gabriel Boulevard/Montebello Town Center

The study roadway segment is Potrero Grande Drive, Markland Drive to Greenwood Avenue.

Existing

Characteristics of the existing street system in the proposed project vicinity are shown in Table 4. As shown on Figure 4 and in Table 4, the site is in the immediate vicinity of a four-lane principal arterial and SR 60. Additionally, the existing intersection geometrics are shown on Figure 4.

Table 4. Study Area Existing Street System Summary

Roadway	Street Classification	Posted Speed Limit	Number of Travel Lanes	Parking	Sidewalks	Bicycle Lanes
Potrero Grande Drive	Principal Arterial	45 mph	5	Yes	Yes	No
Markland Drive	Major Collector	25 mph	4	No	Yes	No
Greenwood Avenue (Saturn Street)	Minor Arterial	25/35 mph	2/4	No	Yes[1]	No
Hill Drive (Del Mar Avenue)	Minor Arterial	40 mph	4	Yes[2]	Yes	No
Paramount Boulevard	Principal Arterial	40 mph	4	Yes	Yes[3]	No
San Gabriel Boulevard	Principal Arterial	40 mph	4	Yes	Yes	No
Neil Armstrong Street	Local Street	25 mph[4]	2	Yes	Yes	No
Town Center Street	Local Street	25 mph	4	No	Yes[5]	No
Garfield Avenue	Principal Arterial	35 mph	5	Yes	Yes	No
Via Campo	Principal Arterial	40 mph	5	No	Yes[5]	No
Wilcox Avenue	Minor Arterial	35 mph	2/5	No	Yes	No
Pomona Boulevard	Principal Arterial	40 mph	3	Yes	Yes	No
Town Center Drive	Local Street	20 mph	2	No	No	No
Montebello Boulevard	Minor Arterial	40 mph	4	No	Yes	Yes
Walnut Grove Avenue	Minor Arterial	45 mph	5	Yes	Yes	No

Source: Caltrans California Road System (CRS) Maps, 2013
1. Sidewalk located north of Potrero Grande Drive.
2. Parking allowed north of Potrero Grande Drive.
3. Sidewalks located along the west side of the roadway.
4. No posted speed limit, assumed at 25 mph.
5. Sidewalks located along the south side of the roadway.

Future

This section identifies specific transportation improvements that will affect the future transportation system within the study area.

Although SR 60 Ramp improvements are planned at the Paramount Boulevard interchange, a completion date has not been determined and was not assumed in future analysis for this project. Additionally, based on a review of the City of Monterey Park, Montebello, Rosemead, and LA County Transportation Capital Improvements Street Improvements, no improvement projects in the study area are anticipated to be completed by 2016 – 2019.

Traffic Volumes

The following summarize the traffic volumes for existing and future (2016, 2018, and 2019) without-project conditions.

Existing

The Cities' and County's requirements (Cities of Montebello, Monterey Park, and Rosemead; and, LA County) are only for intersection peak hour analyses. Therefore, no analysis of daily traffic volumes is required.

Peak Hour Traffic Volumes
Existing turning movement counts at the study intersections were conducted in June 2015. Intersection turning movement counts collected in June 2015 are provided in Appendix A. Additionally, counts for other intersections were obtained from the *Montebello Hills Specific Plan*[1] and *The Monterey Park Market Place* traffic studies.[2] The following identifies the intersection as well as the study intersection where the counts were obtained from:

1. Garfield Avenue/Pomona Boulevard – The Monterey Park Market Place Study
2. Garfield Avenue/Via Campo – The Monterey Park Market Place Study
3. Wilcox Avenue/Pomona Boulevard – The Monterey Park Market Place Study
4. Wilcox Avenue/Via Campo – The Monterey Park Market Place Study
5. Markland Drive/Via Campo (SR 60 EB On-Ramp) – The Monterey Park Market Place Study
6. Markland Drive/Potrero Grande Drive/SR 60 WB Off-Ramp – Newly collected in 2015
7. Greenwood Avenue (Saturn Street)/Potrero Grande Drive – Newly collected in 2015
8. Del Mar Avenue (Hill Drive)/Potrero Grande Drive – Newly collected in 2015
9. Paramount Boulevard/Hill Drive – Newly collected in 2015
10. Paramount Boulevard/SR 60 WB Ramps Neil Armstrong Street) – Newly collected in 2015
11. Paramount Boulevard/SR 60 EB Ramps (Town Center Drive) – Newly collected in 2015
12. Montebello Boulevard/Montebello Town Center (SR 60 EB Ramps) – The Monterey Park Market Place Study
13. Walnut Grove Avenue/San Gabriel Boulevard – The Montebello Hills Specific Plan Study
14. San Gabriel Boulevard/SR 60 WB Ramps – The Montebello Hills Specific Plan Study
15. San Gabriel Boulevard/Montebello Town Center – The Monterey Park Market Place Study

The counts from those previous studies were adjusted to current 2015 conditions based on various ambient growth rates described below. Existing weekday AM and PM peak hour volumes are summarized on Figure 5 and were used to evaluate existing traffic conditions.

The following are the annual growth rates applied to the major roadways or City specific intersections within the study area to develop existing 2015 volumes and all future volumes:

- City of Montebello 1.46%
- City of Monterey Park 0.82%
- San Gabriel Boulevard 1.23%
- Paramount Boulevard 1.44%
- Montebello Boulevard 1.92%

[1] Traffic Study for the Montebello Hills Specific Plan, Montebello, California, KOA Corporation, July 31, 2014
[2] Monterey Park Market Place, Arch Beach Consulting, March 11, 2011

- San Gabriel Ramps 1.19%
- Paramount Ramps 0.78%

For the major roadways, growth rates were applied to the through volumes. These growth rates are consistent with the *Traffic Study for the Montebello Hills Specific Plan, Montebello, California.*

Existing SCE Traffic Volumes

Currently, there are 47 employees that work at the existing substation site. The 47 employees include maintenance and test personnel who perform regular maintenance at the substation and/or within the transmission rights of way. The current substation generates approximately 154 daily trips, with 47 occurring during the a.m. peak hour, and 47 occurring during the p.m. peak hour.

Future

Future (2016, 2018, and 2019) without-project traffic volumes were forecasted by applying the above described annual growth rates to existing traffic volumes as well as traffic from previously approved and/or pending (cumulative) projects that would increase background traffic at study intersections. Twelve cumulative projects were noted in the area and were assumed to be completed by 2016 to provide a conservative analysis. Where available, trips from pipeline projects were distributed and assigned to the network based on the traffic studies. If no traffic study was available the trips were distributed and assigned to the network based on counts and anticipated travel patterns.

Future (2016, 2018, and 2019) without-project weekday AM and PM peak hour traffic volumes reflecting the background growth and traffic from the pipeline projects are shown on Figure 6, Figure 7, and Figure 8 respectively.

Traffic Operations – Phase 1

The following sections outline the existing and future (2016) without-project intersection and midblock/freeway mainline operations.

Intersection Operations

Based on the analysis methodology described previously, the existing weekday AM and PM peak hour traffic volumes were input into *Traffix 8* and *Synchro 9* to determine the existing intersection V/C ratios, delay, and resulting LOS values. Table 6 presents the results of the existing and future (2016) without-project intersection LOS analysis for the weekday AM peak hour. Table 7 presents the results of the existing and future (2016) without-project intersection LOS analysis for the weekday PM peak hour. The LOS calculation sheets are provided in Appendix B.

Table 6. Existing & Future 2016 Weekday AM Peak Hour Intersection Level of Service

14. San Gabriel Boulevard/SR 60 WB Ramps	ICU	Signal	E	0.920	E	0.941
	HCM	*Signal*	*D*	*39*	*D*	*43*
15. San Gabriel Boulevard/Town Center Drive	ICU	Signal	D	0.874	E	0.900

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.
3. Average delay in seconds.

As shown in Table 7 all intersections currently operate at LOS D or better during the PM peak, with the exception of the Garfield Avenue/Via Campo intersection. The Garfield Avenue/Via Campo intersection currently operates at LOS F. Under future (2016) without-project conditions a number of intersections are anticipated to degrade to LOS E or F. The following intersections are anticipated to degrade to LOS E under future (2016) without-project conditions:

- Garfield Avenue/Pomona Boulevard
- Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
- San Gabriel Boulevard/SR 60 WB Ramps
- San Gabriel Boulevard/Town Center Drive

The Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps intersection is anticipated to degrade to LOS F under future (2016) without-project conditions. The remaining intersections are anticipated to operate at LOS D or better.

Midblock and Freeway Mainline Analysis

A midblock roadway segment analysis was also conducted. The *Highway Capacity Software* (HCS 2010) Multi-Lane Highways module, consistent with HCM 2010 methodology, was used to determine the midblock LOS of each study segment for existing and future (2016) without project. The analysis determines the midblock segment LOS based on the density of vehicles on the roadway segment in terms of passenger-cars per mile per lane (pc/mi/ln). AM and PM peak hour midblock traffic volumes were derived for each analysis scenario and input into the HCS software. In addition, other midblock geometrics such as number lanes, lane widths, roadway grades, and number of access points, were entered into HCS.

Table 8 presents the results of the midblock analysis for each study segment. The HCS worksheets are provided in Appendix C.

Table 8. Existing 2015 and Future 2016 Baseline HCS Midblock and Freeway Mainline Summary

	AM Peak Hour Eastbound		AM Peak Hour Westbound		PM Peak Hour Eastbound		PM Peak Hour Westbound	
	LOS	Density[1]	LOS	Density	LOS	Density	LOS	Density

Future 2016 Baseline	C	22.3	D	34.3	C	25.6	D	29.6

Notes: Analyzed per multi-lane module in HCS 2010
1. Density is passenger cars per mile per lane (pc/mi/ln)

As shown in Table 8, all roadway segments are anticipated to operate at the same LOS as under baseline 2016 conditions in both directions with the exception of the Potrero Grande Drive from Markland Drive to Greenwood Avenue segment in the eastbound direction. Segments are anticipated to experience minor increases in pc/mi/ln. The segment of Potrero Grande Drive from Markland Drive to Greenwood Avenue is anticipated to degrade from LOS A to LOS B with a 2.8 increase in pc/mi/ln.

Traffic Operations – Phase 2

The following sections outline the existing and future (2018) without-project intersection and midblock operations.

Intersection Operations

The following section summarizes the existing and future (2018) without-project traffic operations for Phase 2. Table 9 presents the results of the existing and future (2018) without-project intersection LOS analysis for the weekday AM peak hour. Table 10 presents the results of the existing and future (2018) without-project intersection LOS analysis for the weekday PM peak hour. The LOS calculation sheets are provided in Appendix B.

Table 9. Existing & Future 2018 Weekday AM Peak Hour Intersection Level of Service

			2015 Existing		2018 Without-Project

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.
3. Average delay in seconds.

As shown in Table 10 under future (2018) without-project conditions a number of intersections are anticipated to degrade to LOS E or F. The following intersections are anticipated to degrade to LOS E under future (2018) without-project conditions:

- Garfield Avenue/Pomona Boulevard
- San Gabriel Boulevard/SR 60 WB Ramps
- San Gabriel Boulevard/Town Center Drive

The following intersections are anticipated to degrade to LOS F under future (2018) without-project conditions:

- Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
- Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps

As mentioned previously, improvements are planned at the SR 60 On/Off Ramps but were not assumed in this analysis. The remaining intersections are anticipated to operate at LOS D or better.

Midblock and Freeway Mainline Analysis

Table 11 presents the results of the midblock and freeway mainline analysis of the study segments. The HCS worksheets are provided in Appendix C.

Table 11. Existing 2015 and Future 2018 Baseline HCS Midblock and Freeway Mainline Summary

	AM Peak Hour Eastbound		AM Peak Hour Westbound		PM Peak Hour Eastbound		PM Peak Hour Westbound

Future 2018 Baseline	C	22.3	D	34.5	C	25.7	D	29.7

Notes: Analyzed per multi-lane module in HCS 2010
1. Density is passenger cars per mile per lane (pc/mi/ln)

As shown in Table 11, all roadway segments are anticipated to operate at the same LOS as under baseline 2018 conditions in both directions with the exception of the Potrero Grande Drive from Markland Drive to Greenwood Avenue and SR 60 from Garfield Avenue to Paramount Boulevard segments in the eastbound directions. Segments are anticipated to experience minor increases in pc/mi/ln. The segment of Potrero Grande Drive from Markland Drive to Greenwood Avenue is anticipated to degrade from LOS A to LOS B with a 3.0 increase in pc/mi/ln. The segment of SR 60 from Garfield Avenue to Paramount Boulevard is anticipated to degrade from LOS C to LOS D with a 1.8 increase in pc/mi/ln.

Traffic Operations – Phase 3

The following sections outline the existing and future (2019) without-project intersection and midblock operations.

Intersection Operations

The following section summarizes the existing and future (2019) without-project traffic operations for Phase 2. Table 12 presents the results of the existing and future (2019) without-project intersection LOS analysis for the weekday AM peak hour. Table 13 presents the results of the existing and future (2019) without-project intersection LOS analysis for the weekday PM peak hour. The LOS calculation sheets are provided in Appendix B.

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.
3. Average delay in seconds.

As shown in Table 13 under future (2019) without-project conditions a number of intersections are anticipated to degrade to LOS E or F. The following intersections are anticipated to degrade to LOS E under future (2019) without-project conditions:

- Garfield Avenue/Pomona Boulevard
- San Gabriel Boulevard/SR 60 WB Ramps
- San Gabriel Boulevard/Town Center Drive

The following intersections are anticipated to degrade to LOS F under future (2019) without-project conditions:

- Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
- Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps

The remaining intersections are anticipated to operate at LOS D or better.

Midblock and Freeway Mainline Analysis

Table 14 presents the results of the midblock analysis of the study segments. The HCS worksheets are provided in Appendix C.

Table 14. Existing 2015 and Future 2019 Baseline HCS Midblock and Freeway Mainline Summary

Future 2019 Baseline	C	22.4	D	34.5	C	25.8	D	29.8

Notes: Analyzed per multi-lane module in HCS 2010
1. Density is passenger cars per mile per lane (pc/mi/ln)

As shown in Table 14, all roadway segments are anticipated to operate at the same LOS as under baseline 2018 conditions in both directions with the exception of the Potrero Grande Drive from Markland Drive to Greenwood Avenue and SR 60 from Garfield Avenue to Paramount Boulevard segments in the eastbound directions. Segments are anticipated to experience minor increases in pc/mi/ln. The segment of Potrero Grande Drive from Markland Drive to Greenwood Avenue is anticipated to degrade from LOS A to LOS B with a 3.1 increase in pc/mi/ln. The segment of SR 60 from Garfield Avenue to Paramount Boulevard is anticipated to degrade from LOS C to LOS D with a 2.0 increase in pc/mi/ln.

Non-Motorized Facilities

The following describes the existing and future non-motorized facilities within the study area.

Existing

Sidewalks are provided on at least one side of all streets, with the exception of Town Center Drive in the study area. Marked crosswalks are provided on at least one leg of all signalized intersections.

Transit Service

The following sections describe existing and future transit service within the study area.

Existing

Bus transit service in the study area is provided by Metro and City of Monterey Park Spirit Bus. The nearest bus stop is located along Via Campo west of Vail Avenue, approximately one mile southwest (approximately a 20-minute walk) from the project site access location along Potrero Grande. The stop is approximately one-quarter mile (approximately a 6-minute

walk) from the project site access located along Markland Drive. The following lines service the project area:

Line 68/84 Downtown Los Angeles to Montebello – Metro
Line 68 traverses eastbound/westbound primarily along Cesar E. Chavez Avenue between Downtown Los Angeles and Montebello. During a typical weekday the route operates between approximately 4:15 a.m. and 12:45 a.m. Additional Saturday, and Sunday services are provided.

Route 5 – Spirit Bus
Route 5 traverses eastbound/westbound primarily along Riggin Street, Floral Drive, and Corporate Center drive along the southern and western portions of the City of Monterey Park. During a typical weekday the route operates between approximately 6:30 a.m. and 6:30 p.m. Saturday and Sunday services are not provided for Route 5.

Future

There are no transit service changes in the site vicinity based on available plans.

Chapter 5. Traffic Generation Forecast

This section of the analysis documents the proposed weekday daily, AM, and PM peak hour traffic generated by the proposed project.

Trip Generation

The proposed project would include demolition of the existing 220-kV substation and replaced with the proposed 500-kV substation, through three phases of construction.

Project trip generation is based on peak constriction times during the three phases of construction. To develop daily and peak hour trip rates, anticipated construction vehicles and worker trips were estimated based on the various construction components to be completed during the each phase. It is anticipated that a majority of workers would be on-site before 7 AM but that most workers would leave the site at approximately 5 PM. Also, approximately 10 percent of workers are anticipated to meet off-site and carpool to the site. It was assumed that workers carpool to the site would have an average vehicle occupancy of 2. It is anticipated that all workers would be inbound during the AM peak hour and outbound during the PM peak hour. The resulting worker trip generation for each phase is shown in Table 15.

Table 15. Trip Generation for Workers

		AM Peak Hour			PM Peak Hour		
	Daily	**In**	**Out**	**Total**	**In**	**Out**	**Total**
Phase 1 – 2016							
Worker Passenger Car	850	79	0	79	0	346	346
Less 10%	85	8	0	8	0	35	35
Net New Worker Passenger Car	765	71	0	71	0	311	311
Off-Site Worker	43	4	0	4	0	18	18
Total	**808**	**75**	**0**	**75**	**0**	**329**	**329**
Phase 2 – 2018							
Worker Passenger Car	506	50	0	50	0	203	203
Less 10%	51	5	0	5	0	20	20
Net New Worker Passenger Car	455	45	0	45	0	183	183
Off-Site Worker	26	3	0	3	0	10	10
Total	**481**	**48**	**0**	**48**	**0**	**193**	**193**
Phase 3 – 2019							
Worker Passenger Car	328	32	0	32	0	132	132
Less 10%	33	3	0	3	0	13	13
Net New Worker Passenger Car	295	29	0	29	0	119	119
Off-Site Worker	17	2	0	2	0	7	7
Total	**312**	**31**	**0**	**31**	**0**	**126**	**126**

Source: Insignia Environmental, July 2015.

As shown in the table it is anticipated that phase 1 of the project would generate approximately 808 daily worker trips with 75 inbound during the AM peak hour and 329 outbound during the PM peak hour. Phase 2 of the project is anticipated to generate approximately 481 daily trips with approximately 48 inbound during the AM peak hour and 193 outbound during the PM peak hour. Finally, phase three is anticipated to generate approximately 312 daily trips with 31 inbound during the AM peak hour and 126 outbound during the PM peak hour.

For construction truck and heavy vehicle trips it was estimated that approximately 10 percent of the daily construction vehicles would occur during the AM and PM peak hours and were divided into two categories. Truck trips are anticipated to be associated with the substation work as well as the transmission/subtransmission work. It was assumed that all trucks that entered during the peak hour would exit during the peak hour.

To properly assess the truck traffic generated by the various construction phases of the proposed project against intersection capacity during the AM and PM peak commute hours, which contain primarily passenger cars, a Passenger Car Equivalence (PCE) factor was applied to all trucks generated by the proposed project. A PCE factor of 2.0 was applied to 2 or 3 axle medium trucks (i.e., one medium truck is equivalent to two passenger cars) such as the concrete trucks. A PCE factor of 3.0 was applied to trucks with 4 axels or more including single unit and multi-trailer units. The resulting phase 1, 2, and 3 truck trip generation is summarized in Table 16, Table 17, and Table 18, respectively.

Table 16. Truck Trip Generation – Phase 1

		AM Peak Hour			PM Peak Hour		
Vehicle Type	**Daily**	**In**	**Out**	**Total**	**In**	**Out**	**Total**
Substation							
Medium Truck	236	12	12	24	12	12	24

Chapter 6. Traffic Distribution and Assignment

This section of the analysis documents the anticipated trip distributed to adjacent roadways and intersections within the study area for the weekday AM and PM peak hour.

Trip Distribution & Assignment

Project trips were distributed to the network based on existing counts and anticipated travel patterns. Different travel patterns are associated with worker trips, off-site worker trips, and the truck trips. The anticipated worker trip distribution is shown in Figure 9. As shown on Figure 9, the driveway along Potrero Grande Drive was assumed during all phases, and the driveway along Markland Drive was assumed during phase 2 of the project. The driveway on Markland Drive is assumed to be a right-in/right-out driveway only and would not be utilized by truck traffic. Both driveways were accounted for in the trip assignment for phase 2 as shown on Figure 13, it is not anticipated that the overall trip distribution shown on Figure 9 would differ for phase 2. It is anticipated that approximately 25 percent of workers would utilize the driveway during the AM peak hour and approximately 40 percent during the PM peak hour. The anticipated off-site worker distribution is based on the location of the two off-site staging areas and the distribution is shown on Figure 10. The truck trip distribution is anticipated to be more regional and is assigned 50 percent to the west and 50 percent to the east along SR 60. The truck trip distribution was developed utilizing designated truck routes with the exception of Hill Drive which will be treated as a temporary truck route. The truck trip distribution is shown on Figure 11. The resulting trip assignment for phases 1, 2, and 3 is shown on Figure 12, Figure 13, and Figure 14, respectively.

Traffic Volumes

The project traffic was added to future (2016, 2018, and 2019) without-project weekday AM and PM peak hour traffic volumes to form the basis of the with-project analysis. The resulting phase 1, 2, and 3 peak hour traffic volumes are shown on Figure 15, Figure 16, and Figure 17, respectively.

Chapter 7. Traffic Impact Study/Project Impacts

This section of the analysis documents the proposed project's impacts on the surrounding street system and at study intersections. First, the previously estimated traffic generated by the proposed project was distributed and assigned to adjacent roadways and intersections within the study area for the weekday AM and PM peak hour. Next, project trips are added to future without-project traffic volumes and the potential impacts to traffic operations, safety, transit, and non-motorized facilities are identified.

Significance Criteria

The study area for this project spans a number of jurisdictions, each of which has established their own traffic impact significance criteria. The following sections describe the traffic impact significance criteria by jurisdiction. Based on the significance criteria for each jurisdiction, the ICU criteria described below was used to determine if there are impacts at intersections.

City of Montebello

The City of Montebello has specific thresholds for project-related increases in volumes and V/C ratio based on the future without and with-project operating levels. Table 20 describes the various criteria for the City of Montebello.

Table 20. City of Montebello Traffic Impact Significance Criteria

Existing LOS	Existing ICU Value	Project-Related Increase in ICU Value
A,B	0.00 – 0.690	Equal to or greater than 0.05
C	>0.700 – 0.790	Equal to or greater than 0.03
D	> 0.800 – 0.890	Equal to or greater than 0.02
E, F	> 0.900 or greater	Equal to or greater than 0.005

Source: *Guidelines for Process and Requirements for Traffic Impact Study Reports*, City of Montebello, December 2004.

City of Monterey Park

The City of Monterey Park has specific thresholds for project-related increases in volumes and V/C ratio based on the future without and with-project operating levels. Table 21 describes the various criteria for the City of Monterey Park.

Table 21. City of Monterey Park Traffic Impact Significance Criteria

Existing LOS	Existing ICU Value	Project-Related Increase in ICU Value
A,B	0.00 – 0.700	Equal to or greater than 0.06
C	>0.701 – 0.800	Equal to or greater than 0.04
D	> 0.801 – 0.900	Equal to or greater than 0.02
E, F	> 0.901 or greater	Equal to or greater than 0.01

Source: City of Monterey Park from the *Traffic Study for Montebello Hills Specific Plan*, KOA, July 2014.

City of Rosemead

The City of Rosemead *Transportation Impact Analysis Guidelines* (February 2007) has a specific threshold for project-related increases in volumes and V/C ratio based on the future without and with-project operating levels. For intersections operating at LOS F (V/C greater than 1.0), a project is considered to have an impact if the project-related V/C increase is equal to or greater than 0.020.

Los Angeles (LA) County

LA County has a specific threshold for project-related increases in volumes and V/C ratio based on the future without and with-project operating levels. Table 22 describes the various criteria for the LA County.

Table 22. LA County Traffic Impact Significance Criteria

Existing LOS	Existing ICU Value	Project-Related Increase in ICU Value
C	0.700 – 0.800	Equal to or greater than 0.04
D	< 0.800 – 0.900	Equal to or greater than 0.02
E, F	< 0.900 or greater	Equal to or greater than 0.01

Source: *Traffic Impact Analysis Report Guidelines*, LA County, January 1997.

Traffic Operations – Phase 1

The following sections outline the anticipated intersection and midblock operations for phase 1.

Intersection Operations

An intersection operations analysis was conducted in the study area to evaluate the future (2016) without and with-project weekday AM and PM peak hour conditions. Intersection operations were calculated using the LOS methodology described previously. Table 23 provides a comparison between the future 2016 without and with-project operations for the AM peak hour and Table 24 provides a comparison between the future 2016 without and with-project operations for the PM peak hour. The tables also describe the intersection traffic control and which analysis method was utilized. The on/off-ramps with SR 60 were evaluated using the ICU and HCM 2010 methodologies per Caltrans requirements. For purposes of this analysis it was assumed that all site access locations are stop controlled on the side-street, therefore the HCM 2010 methodology was used. Detailed LOS and V/C worksheets are included in Appendix B.

Table 23. Future 2016 AM Peak Hour Intersection Level of Service

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.
3. Average delay in seconds.

As shown in Table 24, during the PM peak hour all intersections are anticipated to operate at the same LOS under future without and with-project conditions with the exception of the Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp intersection. The Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp intersection is anticipated to degrade from LOS E to LOS F under future with-project conditions.

Table 25. Phase 1 2016 AM Peak Hour Project Impact Significance

Intersection	Jurisdiction	Baseline LOS[1]	Without-Project	With-Project	V/C[2] Delta	Exceedance of Standard?
1. Garfield Avenue/Pomona Boulevard	Montebello	D	0.888	0.894	0.006	Yes

15. San Gabriel Boulevard/Town Center Drive	Rosemead	C	0.724	0.737	0.013	No

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.

As shown in Table 25 phase 1 of the project will exceed adopted standards at 4 intersections during the AM peak hour. Impacts area anticipated that the following intersections:

- Garfield Avenue/Pomona Boulevard
- Garfield Avenue/Via Campo
- Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
- Markland Drive/Potrero Grande-SR 60 WB Off-Ramp

All impacts are associated with construction traffic and will be temporary and therefore not significant. All LOS results are provided for the anticipated peak construction periods for each phase of construction for the proposed project. Temporary mitigation measures contained in a Construction Traffic Management Plan will be implemented to reduce the temporary impacts of construction-related traffic. The specifics of the Construction Traffic Management Plan are discussed in Chapter 4 – Findings and Recommendations.

Table 26. Phase 1 2016 PM Peak Hour Project Impact Significance

Intersection	Jurisdiction	Baseline LOS[1]	Without-Project	With-Project	V/C[2] Delta	Exceedance of Standard?
1. Garfield Avenue/Pomona Boulevard	Montebello	E	0.913	0.947	0.034	Yes

9. Paramount Boulevard/Hill Drive (San Gabriel Boulevard)	LA County	C	0.748	0.777	0.029	No
10. Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps	Montebello	F	1.236	1.248	0.012	Yes
11. Paramount Boulevard/Town Center Drive-SR 60 WB Ramps	Montebello	D	0.865	0.874	0.009	No
12. Montebello Boulevard/Town Center Drive-SR 60 EB Ramps	Rosemead	C	0.73	0.762	0.032	No
13. Walnut Grove Avenue/San Gabriel Boulevard	Rosemead	C	0.785	0.801	0.016	No
14. San Gabriel Boulevard/SR 60 WB Ramps	Rosemead	E	0.941	0.964	0.023	No
15. San Gabriel Boulevard/Town Center Drive	Rosemead	E	0.724	0.737	0.013	No

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.
3. Average delay in seconds.

As shown in Table 26 phase 1 of the project is anticipated to exceed adopted standards at 5 intersections during the PM peak hour. Impacts area anticipated at the following intersections:

- Garfield Avenue/Pomona Boulevard
- Garfield Avenue/Via Campo
- Wilcox Avenue/Pomona Boulevard
- Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
- Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps

All impacts are associated with construction traffic and will be temporary and therefore not significant.

Midblock and Freeway Mainline Analysis

A midblock roadway segment and freeway mainline analysis was also conducted. The *Highway Capacity Software* (HCS 2010) Multi-Lane Highways module, consistent with HCM 2010 methodology, was used to determine the midblock LOS of each study segment for future (2016) without and with-project. The analysis determines the midblock segment LOS based on the density of vehicles on the roadway segment in terms of passenger-cars per mile per lane (pc/mi/ln). AM and PM peak hour midblock traffic volumes were derived for each analysis scenario and input into the HCS software. In addition, other midblock geometrics such as number lanes, lane widths, roadway grades, and number of access points, were entered into HCS.

Table 27 presents the results of the midblock analysis for the study segments for future (2016) without and with-project conditions. The HCS worksheets are provided in Appendix C.

Table 27. Phase 1 (2016) HCS Midblock and Freeway Mainline Summary

	AM Peak Hour Eastbound		AM Peak Hour Westbound		PM Peak Hour Eastbound		PM Peak Hour Westbound	
	LOS	Density[1]	LOS	Density	LOS	Density	LOS	Density
Potrero Grande Drive: Markland Drive to Greenwood Avenue								
Future 2016 Baseline	A	5.0	A	9.7	B	12.4	A	6.3
Future 2016 + Phase 1	A	5.3	A	10.3	B	14.4	A	6.6
SR 60: West of Garfield Avenue								
Future 2016 Baseline	D	29.5	F	58.4	E	36.8	E	44.5
Future 2016 + Phase 1	D	29.8	F	59.0	E	37	E	45.9
SR 60: Garfield Avenue to Paramount Boulevard								
Future 2016 Baseline	C	21.8	D	33.6	C	25.9	D	29.4
Future 2016 + Phase 1	C	21.8	D	33.7	D	26.1	D	29.4
SR 60: Paramount Boulevard to San Gabriel Boulevard								
Future 2016 Baseline	C	21.0	D	31.3	C	24.5	D	27.6
Future 2016 + Phase 1	C	21.1	D	31.4	C	24.5	D	27.7
SR 60: East of San Gabriel Boulevard								
Future 2016 Baseline	C	22.3	D	34.3	C	25.6	D	29.6
Future 2016 + Phase 1	C	22.3	D	34.5	C	25.8	D	29.7

Notes: Analyzed per multi-lane module in HCS 2010
1. Density is passenger cars per mile per lane (pc/mi/ln)

As shown in Table 27, all roadway segments are anticipated to operate at the same LOS as under baseline 2016 conditions in both directions with the exception of the SR 60 from Garfield Avenue to Paramount Boulevard segment in the eastbound direction. Segments are anticipated to experience minor increases in pc/mi/ln. The segment of SR 60 from Garfield Avenue to Paramount Boulevard is anticipated to degrade from LOS C to LOS D with a 0.2 increase in pc/mi/ln.

All impacts are associated with construction traffic and will be temporary and therefore not significant.

Traffic Operations – Phase 2

The following sections outline the anticipated intersection and midblock operations for phase 2.

Intersection Operations

An intersection operations analysis was conducted in the study area to evaluate the future (2018) without and with-project weekday AM and PM peak hour conditions. Intersection operations were calculated using the LOS methodology described previously. Table 28 provides a comparison between the future 2018 without and with-project operations for the AM peak hour and Table 29 provides a comparison between the future 2018 without and with-project operations for the PM peak hour. Detailed LOS and V/C worksheets are included in Appendix B.

Table 28. Future 2018 AM Peak Hour Intersection Level of Service

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.
3. Average delay in seconds.

As shown in Table 31 phase 2 of the project is anticipated to have temporary significant impacts at 4 intersections during the PM peak hour. Impacts area anticipated at the following intersections:

- Garfield Avenue/Pomona Boulevard
- Garfield Avenue/Via Campo
- Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
- Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps

All impacts are associated with construction traffic and will be temporary and therefore not significant.

Midblock and Freeway Mainline Analysis

Table 32 presents the results of the midblock analysis for the study segments for future (2018) without and with-project conditions. The HCS worksheets are provided in Appendix C.

Table 32. Phase 2 2018 HCS Midblock and Freeway Mainline Summary

Notes: Analyzed per multi-lane module in HCS 2010
1. Density is passenger cars per mile per lane (pc/mi/ln)

As shown in Table 32, all roadway segments are anticipated to operate at the same LOS as under baseline 2018 conditions in both directions with minor increases in overall pc/mi/ln.

All impacts are associated with construction traffic and will be temporary and therefore not significant.

Traffic Operations – Phase 3

The following sections outline the anticipated intersection and midblock operations for phase 3.

Intersection Operations

An intersection operations analysis was conducted in the study area to evaluate the future (2019) without and with-project weekday AM and PM peak hour conditions. Intersection operations were calculated using the LOS methodology described previously. Table 33 provides a comparison between the future 2019 without and with-project operations for the AM peak hour and Table 34 provides a comparison between the future 2019 without and with-project operations for the PM peak hour. Detailed LOS and V/C worksheets are included in Appendix B.

Table 33. Future 2019 AM Peak Hour Intersection Level of Service

15. San Gabriel Boulevard/Town Center Drive	Rosemead	E	0.934	0.950	0.016	No

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board.
2. V/C is volume to capacity ratio.
3. Average delay in seconds.

As shown in Table 36 phase 3 of the project is anticipated to exceed adopted standards at 4 intersections during the PM peak hour. Impacts are anticipated at the following intersections:

- Garfield Avenue/Pomona Boulevard
- Garfield Avenue/Via Campo
- Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
- Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps

All impacts are associated with construction traffic and will be temporary and therefore not significant.

Midblock and Freeway Mainline Analysis

Table 37 presents the results of the midblock and freeway mainline analysis for the study segments for future (2019) without and with-project conditions. The HCS worksheets are provided in Appendix C.

Table 37. Phase 3 2019 HCS Midblock and Freeway Mainline Summary

	AM Peak Hour Eastbound		AM Peak Hour Westbound		PM Peak Hour Eastbound		PM Peak Hour Westbound

SR 60: East of San Gabriel Boulevard								
Future 2019 Baseline	C	22.4	D	34.5	C	25.8	D	29.8
Future 2019 + Phase 3	C	22.4	D	34.6	C	25.9	D	29.8

Notes: Analyzed per multi-lane module in HCS 2010
1. Density is passenger cars per mile per lane (pc/mi/ln)

As shown in Table 37, all roadway segments are anticipated to operate at the same LOS as under baseline 2019 conditions in both directions with minor increases in overall pc/mi/ln.

All impacts are associated with construction traffic and will be temporary and therefore not significant.

Site Access Evaluation

The proposed project includes one full access driveway locations along Potrero Grande Drive which will be utilized during all phases of construction. Additionally, site access will be provided via a right-in/right-out driveway along Markland Drive during phase 2 of the project. It is anticipated that the site access on Markland Avenue would be adjacent to a driveway associated with a mini-warehouse in the future. Both driveways were assumed to be side-street stop controlled. The driveway associated with the mini-warehouse was assumed to be full access. The site access location operations are summarized in Table 38.

Table 38. Driveway Operation Summary

	Phase 1 2016		Phase 2 2018		Phase 3 2019	
Intersection	**LOS[1]**	**Delay[2]**	**LOS[1]**	**Delay[2]**	**LOS[1]**	**Delay[2]**
AM Peak Hour						
A. Potrero Grande Drive/Site Access	C	17	C	15	C	16
B. Site Access/Markland Drive	-	-	C	18	-	-
PM Peak Hour						
A. Potrero Grande Drive/Site Access	F	279	C	24	F	62
B. Site Access/Markland Drive	-	-	E	36	-	-

1. Level of service (LOS) as defined by the 2010 *Highway Capacity Manual*, Transportation Research Board. .
2. Delay in seconds reported for the worst movement.

Queuing Analysis

A queueing analysis was completed utilizing Sim Traffic (version 9.0) at the site access driveways to review on-site queuing as summarized in Table 39.

Table 39. Driveway Queuing Summary

	Phase 1 2016		Phase 2 2018		Phase 3 2019	
Intersection	**Queue[1]**	**WM[2]**	**Queue[1]**	**WM[2]**	**Queue[1]**	**WM[2]**
AM Peak Hour						
A. Potrero Grande Drive/Site Access	48	NBL	39	NBL	40	NBL
B. Site Access/Markland Drive[3]	-	-	7	NBR	-	-
PM Peak Hour						
A. Potrero Grande Drive/Site Access	2,546	NBL	52	NBR	162	NBL
B. Site Access/Markland Drive[3]	-	-	85	WBR	-	-

NB = Northbound, SB = Southbound, EB = Eastbound, WB = Westbound
1. Driveway queuing summarized for the 95th percentile in feet for driveway movements.
2. Worst movement.
3. Only queuing associated with the project is presented.

As shown in Table 39, the largest queues are generally expected for the northbound left-turn movement from the site access location on Potrero Grande Drive under phases 1, 3 and phase 2 for the AM peak hour. Under phase 2 PM peak hour conditions the worst queue is anticipated to be the westbound right-turn movement at the site access located along Markland Drive.

All impacts are associated with construction traffic and will be temporary and therefore not significant.

Chapter 8. Parking Impacts

On-site vehicle parking would be accommodated within the proposed substation site. Parking would be located on-site in areas that are out of the way of construction activities. No off-site on-street parking is anticipated. Anticipated peak parking demand is estimated based on the daily trip generation for each phase of construction.

Parking associated with other elements of the project, including the transmission, subtransmission, distribution, and telecommunications work would be on the ROW or at a substation site. There is no anticipated on-street parking associated with these components.

Chapter 9. Other Construction Impacts

This section outlines additional impacts anticipated from the proposed project's construction related traffic.

Unusual Circumstances (pavement impacts from truck traffic)

Although, traffic generated by the three construction phases of the project would have the potential to impact street pavement on truck routes, all truck traffic was distributed and assigned to the network utilizing existing City-designated truck routes. These existing truck routes are on streets that have been designed and built with higher pavement indices to accommodate higher truck volumes. The exception would be on Paramount Boulevard, between Arroyo Drive and Hill Drive; and, Hill Drive from Paramount Boulevard to Potrero Grande Drive. It is anticipated that these roadways will be temporarily designated as a truck route during construction.

Impacts at Non-Substation Construction Areas

The majority of daily and peak hour trips are associated with construction at the Mesa Substation and within the adjacent transmission rights-of-way. Limited trips will be required at the 28 outlying substations where work within the interior of existing substations would occur. We estimate these trips to be 15 to 30 trips per substation, per day during construction activities at these locations and will not cause significant impacts. Along the telecommunications routes, 1-2 trucks are necessary to be required for installation along these routes, and will not cause significant traffic impacts.

Seven potential staging yards have been proposed, three of which are located on the ROWs adjacent to Mesa Substation. (There is a fourth staging yard adjacent to Goodrich Substation, which will only serve work at that location and is not expected to generate significant trips.) The largest anticipated staging areas are located east of San Gabriel Boulevard at Fern Avenue (San Gabriel yard), east of Santa Anita Avenue to the south of SR 60 (Santa Anita yard), and at Saybrook Avenue and South Tubeway Avenue (Laguna Bell yard), as shown on Figure 9 and Figure 10.

All trips associated with the six potential staging yards serving construction at Mesa Substation, including the Laguna Bell staging yard, have been accounted for in the trip generation and distribution analyses, as shown on Figure 9, with the exception of the San Gabriel and the Santa Anita staging areas. The San Gabriel and Santa Anita staging yards were accounted for as shown on Figure 10. Trips to and from the other yards are not expected to cause significant impacts on the adjacent roadways. Traffic generated by construction workers to/from these yards to the Mesa Substation has already been accounted for in the traffic analysis. A majority of the traffic generated by trucks was assumed to come directly from SR 60 to the east and west.

Truck traffic from the San Gabriel and Laguna Bell staging areas would redistribute a nominal amount of project-related truck traffic at the intersection of San Gabriel Boulevard/Hill Drive (from the San Gabriel site) and at the Garfield Avenue/Via Campo intersection (from the Laguna Bell site). The Santa Anita site would use the SR 60 to get to the substation, so trucks from that site have already been accounted for in the traffic analysis. Approximately three trucks (or six truck trips – one inbound and one outbound trip; or, 18 passenger-car trips assuming a 3.0 PCE) per day from each staging yard we would generate one inbound truck (or 3 passenger-cars) trip to the Mesa Substation during the a.m. peak hour. That truck would stay on-site for at least an hour, unloading/loading materials, and leave the site after the a.m. peak hour. The other two trucks (or four truck trips; or, 12 passenger-car trips)

would be destined to the substation during the middle of the day, before the p.m. peak hour. No trucks from the staging areas would arrive or depart the site during the p.m. peak hour as it would be too late to receive or load materials.

The additional truck trip (or 3 passenger-car trips) during the a.m. peak hour from each staging area would equate to 0.11 percent of the a.m. peak hour traffic at San Gabriel Boulevard/Hill Drive; and, 0.08 percent of the a.m. peak hour traffic at Garfield Avenue/Via Campo. These percentages of traffic would not be measureable in terms of V/C increases at the affected intersections, and therefore, the addition of truck traffic to these intersections from the off-site staging yards would not cause these intersections to exceed, or further exceed, a V/C threshold per their respective jurisdiction's Significance Criteria.

Proposed Traffic Control

Temporary lane closures will be necessary during trenching activities along Potrero Drive. Traffic control measures would be consistent with those published in the California Joint Utility Traffic Control Manual (California Inter-Utility Coordinating Committee 2010). Lane closures will be consistent with the traffic control manual.

Temporary, short-term lane closures will occur on Loveland Street during the conversion of the streetlight source line to underground, and during installation of portions of the telecommunications lines adjacent to Durfee Avenue, Lincoln Avenue, Avenida De la Merced, a portion of Montebello Boulevard, San Gabriel Boulevard, and Potrero Grande Drive. These temporary lane closures are expected to be short-term in duration

Chapter 10. Findings and Mitigation

This transportation impact study summarizes the project traffic impacts of the proposed substation demolition and expansion. General findings include:

- The proposed project would demolish the existing 220-kV substation and construct a 500-kV substation.
- The proposed project is anticipated to be constructed over 55 months in three phases. Phase 1 is anticipated to generate 2,144 daily trips with 202 occurring during the AM peak hour and 453 during the PM peak hour. Phase 1 is anticipated to be completed by the 4th quarter of 2018. Phase 2 is anticipated to be completed by the 1st quarter of 2019 and is anticipated to generate 789 daily trips with 72 trips occurring during the AM peak hour and 217 trips during the PM peak hour. The 3rd phase is anticipated to generate approximately 1,086 daily trips with 105 during the AM peak hour and 200 during the PM peak hour. Phase 3 is anticipated to be completed by the 4th quarter of 2020.
- Anticipated intersection impacts associated with phase 1 are listed below

  During AM peak hour, impacts are anticipated at the following 4 intersections:

  - Garfield Avenue/Pomona Boulevard
  - Garfield Avenue/Via Campo
  - Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
  - Markland Drive/Potrero Grande-SR 60 WB Off-Ramp

  During the PM peak hour, impacts are anticipated at the following 5 intersections:

  - Garfield Avenue/Pomona Boulevard
  - Garfield Avenue/Via Campo
  - Wilcox Avenue/Pomona Boulevard
  - Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
  - Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps
- Anticipated intersection impacts associated with phase 2 are listed below

  During AM peak hour, impacts are anticipated at the following intersection:

  - Garfield Avenue/Via Campo

  During the PM peak hour, impacts are anticipated at the following 4 intersections:

  - Garfield Avenue/Pomona Boulevard
  - Garfield Avenue/Via Campo
  - Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
  - Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps

- Anticipated intersection impacts associated with phase 3 are listed below

  During AM peak hour no impacts are anticipated

  During the PM peak hour, impacts are anticipated at the following 4 intersections:

  - Garfield Avenue/Pomona Boulevard
  - Garfield Avenue/Via Campo
  - Markland Drive (Vail Avenue)/Via Campo-SR 60 EB On-Ramp
  - Paramount Boulevard/Neil Armstrong Street-SR 60 WB Ramps

Mitigation Measures

It is anticipated that because the impacts are not significant, mitigation measures would not be required.

WHAT TRANSPORTATION CAN BE.

TECHNICAL MEMORANDUM

DATE: December 17, 2015

TO: Sheree James, SCE
Stephanie Hansen, Insignia Environmental

FROM: Dennis Pascua, Transportation Planning Manager
Jessica Lambert, Traffic Engineer

SUBJECT: Supplemental Traffic Analysis for SCE Mesa 500-kV Substation Driveways for Construction Phases 1, 2, and 3

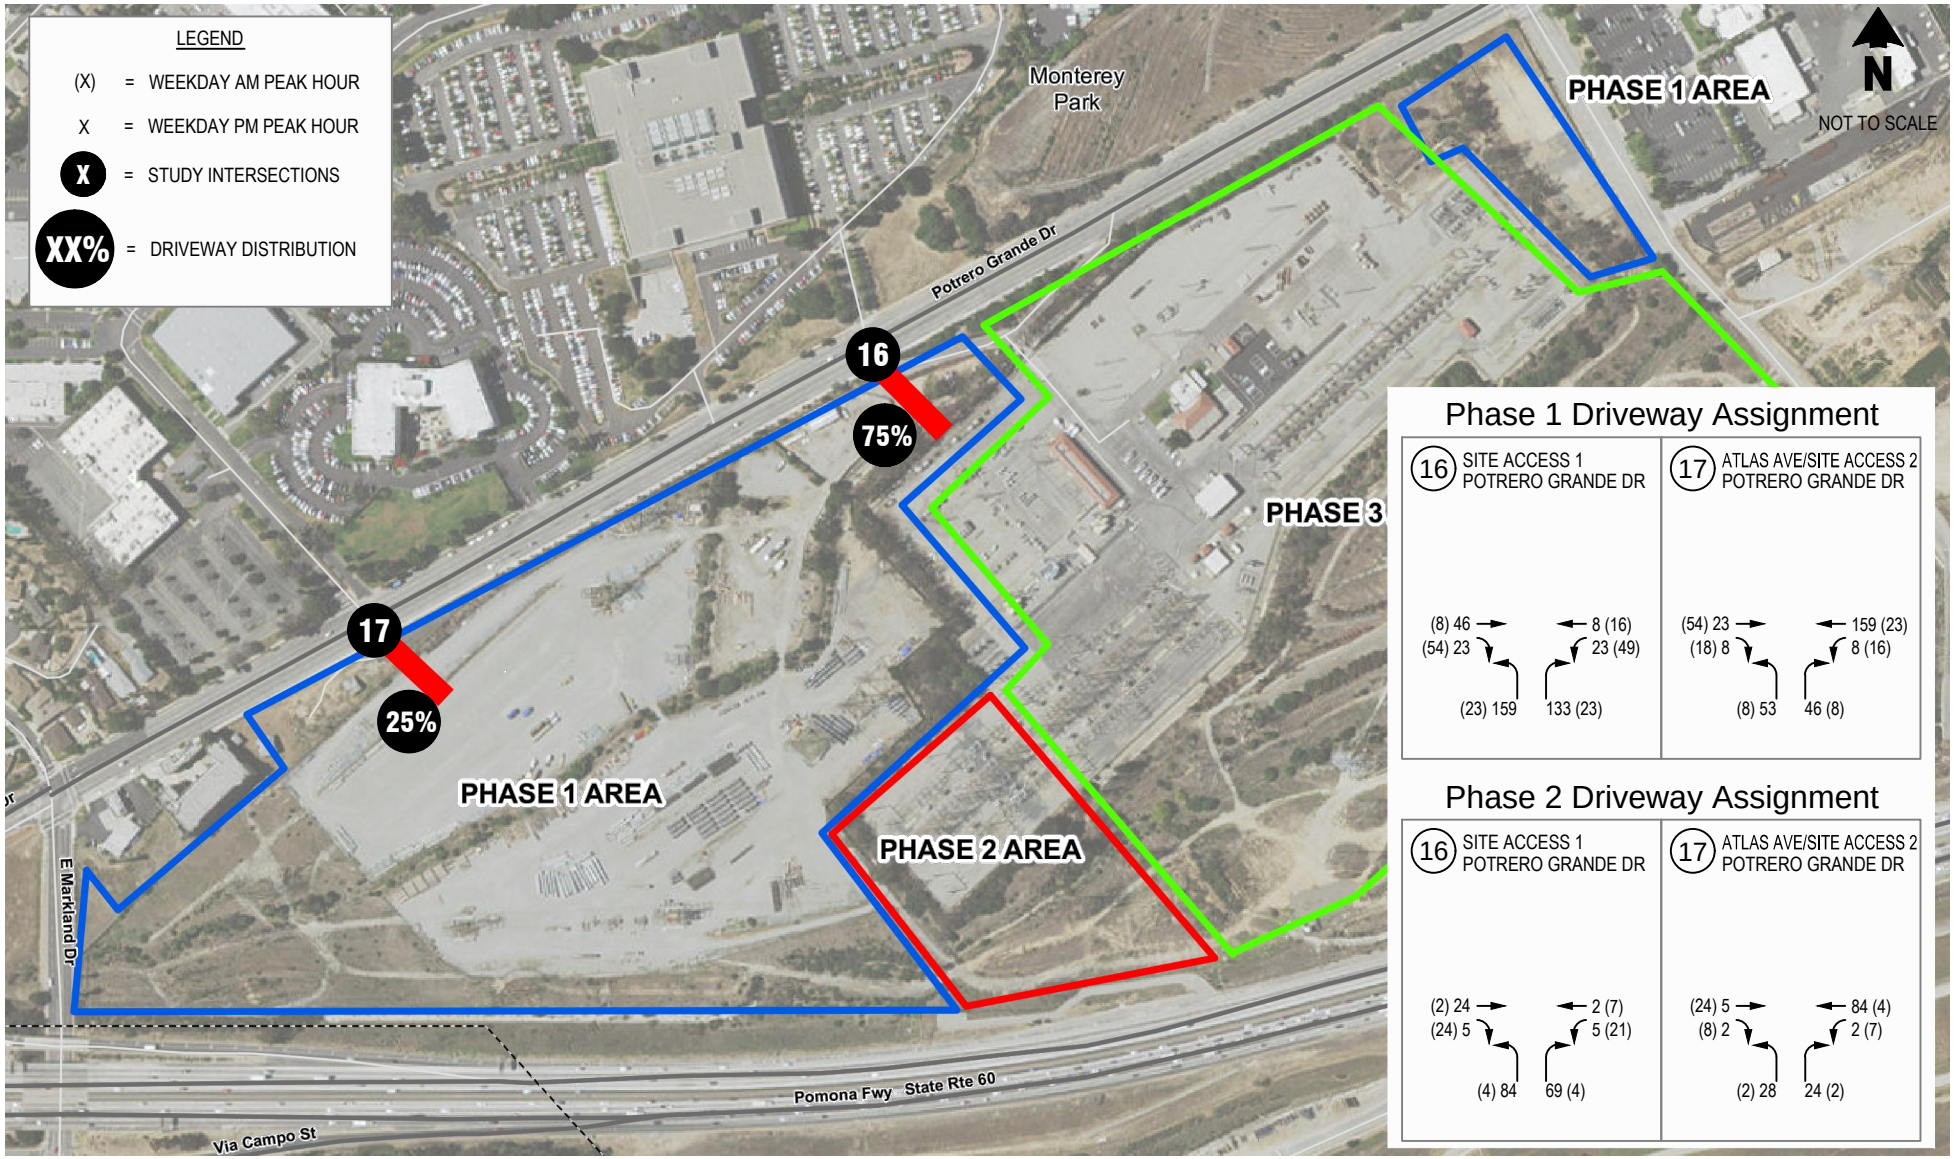
The following Technical Memorandum provides a Supplemental Traffic Analysis of the updated driveway locations for the three construction phases of the proposed Southern California Edison (SCE) Mesa 500-kV Substation (proposed project). This analysis is intended to supplement the *Revised Draft Traffic Impact Analysis for the Mesa 500-kV Substation* prepared by Transpo Group (Transpo) in August 2015. This document will be referred to herein as the "August 2015 TIA". The August 2015 TIA contains all of the detailed methodologies and assumptions used in the traffic analysis of the proposed project. The purpose of this analysis is to analyze and document the potential impacts of the updated project driveway locations for each construction phase (Phase 1 in 2016, Phase 2 in 2018, and Phase 3 in 2019).

The project site is located north of State Route 60 (SR 60), south of Potrero Grande Drive between Markland Drive and Greenwood Avenue in the City of Monterey Park (City) in Los Angeles (LA) County (County). The existing 220-kV substation would be demolished and replaced with the proposed 500-kV substation.

Updated Driveway Locations

Figures 1 and 2 show the proposed driveway locations for Phases 1 and 2, and Phase 3, respectively. SCE has not yet determined the exact locations of the two driveways to be located on Potrero Grande Drive for all three construction phases. For purposes of this analysis, Driveways 1 and 2 have been assumed to be located across a restricted private office driveway and Atlas Avenue, respectively. Driveway 3 is assumed to be located approximately 800 feet east of Driveway 1. These locations represent the most conservative analysis of traffic volumes along Potrero Grande Drive, and actual locations may vary slightly upon approval by the City of Monterey Park.

As shown in Figure 1, two temporary construction access driveways are proposed on Potrero Grande Drive for Phases 1 and 2. Driveway 1 would be located approximately 1,500 feet west of the Greenwood Avenue/Potrero Grande Drive intersection, and would line-up with an existing restricted-access driveway on the north side of Potrero Grande Drive. Driveway 2 would be located approximately 1,175 feet west of Driveway 1, and would line-up with Atlas Avenue, a primary access road for a large office park across the street. Both driveways would provide for full-access movements, and would remain unsignalized with stop control on the minor street (driveways). In addition, the project driveway on Markland Drive previously analyzed for Phase 2 in the August 2015 TIA would be removed.



Phase 1 and 2 Driveway Trip Distribution and Assignment

FIGURE 1

Mesa 500-kV Substation

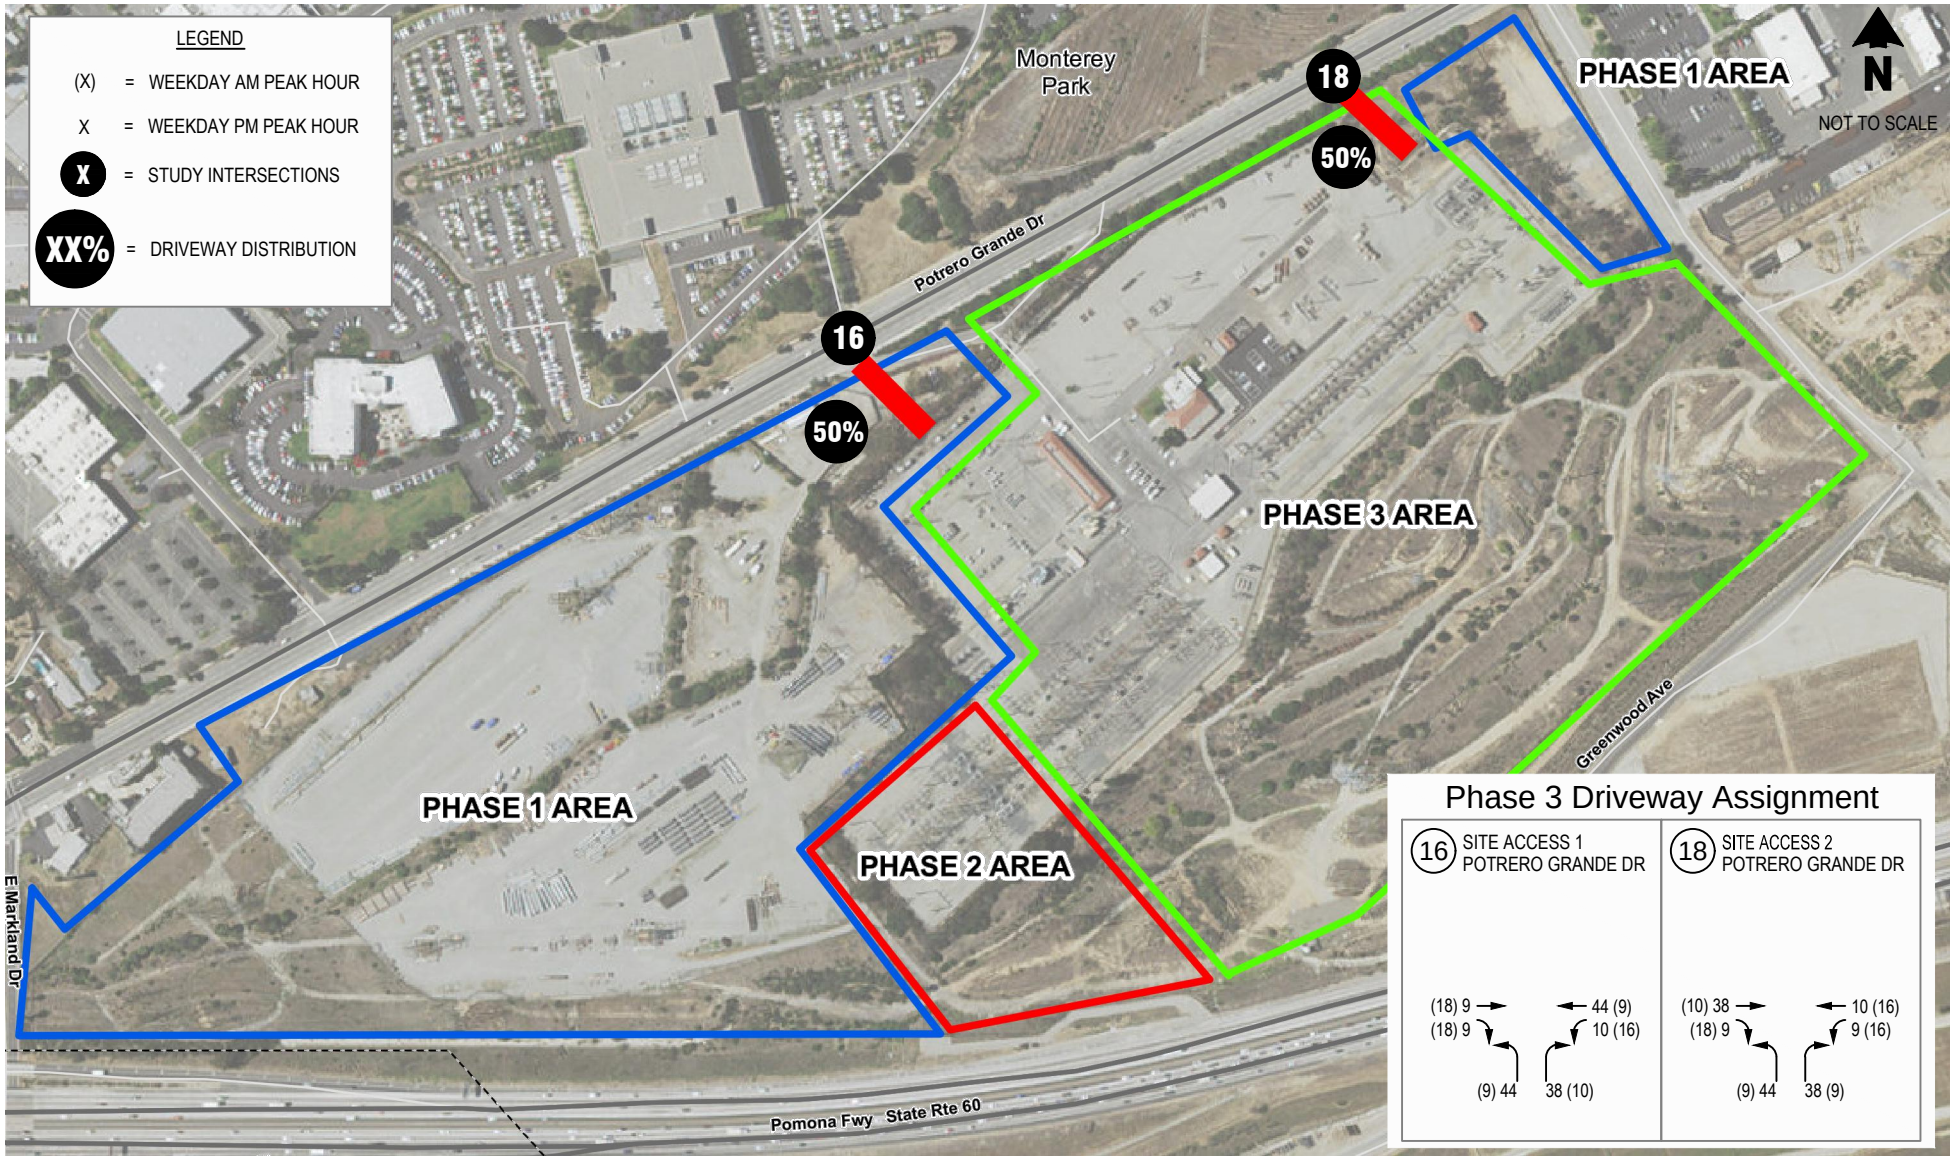
WHAT TRANSPORTATION CAN BE.

Dec 17, 2015 - 7:02am jessical C:\Users\jessical\appdata\local\temp\AcPublish_10748\15238_Graphics_Driveway Update.dwg Layout: Phase 1&2 Assign



Phase 3 Driveway Trip Distribution and Assignment

FIGURE 2

Mesa 500-kV Substation

transpogroup
WHAT TRANSPORTATION CAN BE.

Dec 17, 2015 - 7:03am jessical C:\Users\jessical\appdata\local\temp\AcPublish_10748\15238_Graphics_Driveway Update.dwg Layout: Phase 3 Assign

As shown in Figure 2, two temporary construction access driveways are also proposed on Potrero Grande Drive for Phase 3. Driveway 1 would remain in the same location (as Phases 1 and 2), and a new driveway, Driveway 3, would be located approximately 800 feet east of Driveway 1. Driveway 2 (across from Atlas Avenue) would be removed in Phase 3. Driveway 3 will eventually become the permanent primary driveway for the project site. Both driveways would provide for full-access movements, and would remain unsignalized with stop control on the minor street (driveways).

Traffic Analysis

A traffic analysis was prepared consistent with the methodologies and assumptions outlined in the August 2015 TIA for the updated driveway locations for Construction Phases 1, 2, and 3. New weekday a.m. and p.m. peak hour traffic counts were collected at the intersection of Atlas Avenue/Potrero Grande Drive in early December 2015. The raw traffic volume worksheets are attached to this Technical Memorandum. While a nominal amount of vehicles was observed at the existing restricted driveway across from Driveway 1, it was conservatively assumed that 20 vehicles would enter, and 20 vehicles would exit, the driveway (10 vehicles in each turn lane) in both peak hours.

Table 1 below provides a summary of the construction trip generation estimates for each construction phase as reported in the August 2015 TIA.

Table 1. Trip Generation Summary by Phase

			AM Peak Hour			PM Peak Hour		
		Daily	In	Out	Total	In	Out	Total
Phase 1 – 2016								
Net New Worker Passenger Car		765	71	0	71	0	311	311
Off-Site Worker		43	4	0	4	0	18	18
Medium Truck (PCE Equivalent)		532	26	26	52	26	26	52
Large Truck (PCE Equivalent)		804	36	36	72	36	36	72
	Total	**2,144**	**140**	**62**	**202**	**62**	**391**	**453**
Phase 2 – 2018								
Net New Worker Passenger Car		455	45	0	45	0	183	183
Off-Site Worker		26	3	0	3	0	10	10
Medium Truck (PCE Equivalent)		140	6	6	12	6	6	12
Large Truck (PCE Equivalent)		168	6	6	12	6	6	12
	Total	**789**	**60**	**12**	**72**	**12**	**205**	**217**
Phase 3 – 2019								
Net New Worker Passenger Car		295	29	0	29	0	119	119
Off-Site Worker		17	2	0	2	0	7	7
Medium Truck (PCE Equivalent)		84	4	4	8	4	4	8
Large Truck (PCE Equivalent)		690	33	33	66	33	33	66
	Total	**1,086**	**68**	**37**	**105**	**37**	**163**	**200**

Source: Insignia Environmental, July 2015.

The trips generated by each phase were distributed through each phase's respective driveway locations based on the driveway distribution percentage splits shown in Figures 1 (for Phases 1 and 2) and 2 (for Phase 3). It should be noted that for Phases 1 and 3 the project impacts and findings at all other study intersections would remain the same as in the August 2015 TIA as the revised project trip assignments would only occur at Driveways 1, 2, and 3 (all on Potrero Grande Drive). For Phase 2, since the previously analyzed driveway at Markland Drive would be removed, the trip distribution/assignment at Markland

Drive/Potrero Grande Drive would also be revised, along with Driveways 1 and 2. All project impacts and findings for all other intersections for Phase 2 would remain the same as in the August 2015 TIA.

Table 2 provides the intersection level of service (LOS) results of the driveway analysis. The significance criteria used in this analysis is consistent with the criteria outlined in the August 2015 TIA. The LOS worksheets are attached to this Technical Memorandum.

Phase 1 – Driveway Analysis

As shown in Table 2, traffic from Phase 1 of construction will exceed adopted standards at both driveways in one or both peak hours. Impacts are anticipated as follows:

- Driveway 1/Potrero Grande Drive (LOS D to LOS F in p.m. peak hour)
- Atlas Avenue – Driveway 2/Potrero Grande Drive (LOS B to LOS F in a.m. peak hour, and LOS C to LOS F in p.m. peak hour)

All impacts are associated with construction traffic and will be temporary and therefore not significant. All LOS results are provided for the anticipated peak construction periods for each phase of construction for the proposed project. Temporary mitigation measures contained in a Construction Traffic Management Plan will be implemented to reduce the temporary impacts of construction-related traffic.

Phase 2 – Driveway Analysis

As shown in Table 2, traffic from Phase 2 of construction will also exceed adopted standards at both driveways in one or both peak hours. Impacts are anticipated as follows:

- Driveway 1/Potrero Grande Drive (LOS D to LOS F in p.m. peak hour)
- Atlas Avenue – Driveway 2/Potrero Grande Drive (LOS B to LOS F in a.m. peak hour, and LOS C to LOS F in p.m. peak hour)

With the revised project trip assignment at Markland Drive/Potrero Grande Drive, no project impacts are forecast at this intersection. All impacts at the two project driveways are associated with construction traffic and will be temporary and therefore not significant. Temporary mitigation measures contained in a Construction Traffic Management Plan will be implemented to reduce the temporary impacts of construction-related traffic.

Phase 3 – Driveway Analysis

As shown in Table 2, traffic from Phase 3 of construction will exceed adopted standards at both driveways in the p.m. peak hour only. Impacts are anticipated as follows:

- Driveway 1/Potrero Grande Drive (LOS D to LOS F in p.m. peak hour)
- Driveway 3 (new)/Potrero Grande Drive (LOS F in p.m. peak hour)

All impacts are associated with construction traffic and will be temporary and therefore not significant. Temporary mitigation measures contained in a Construction Traffic Management Plan will be implemented to reduce the temporary impacts of construction-related traffic.

Notes: Unsignalized intersections analyzed using HCM2010 methodology (delay), and signalized intersections analyzed using ICU methodology (V/C).
Delay expressed in seconds, and V/C expressed in volume-to-capacity ratio.
