DATA REQUEST SET A1503003 ED-SCE-04

To: ENERGY DIVISION
Prepared by: Rey Gonzales
Title: Environmental Project Manager
Dated: 09/16/2015

Question 10.a:

SCE has indicated that three oil production wells are located on the Substation site. SCE indicated that it has obtained confirmation that two of these wells have been properly abandoned and that the third would be abandoned in the first quarter of 2016 as part of an ongoing SCE program. Provide the following information:

- A. Location of the three oil wells, including distinction of which two are abandoned

Response to Question 10.a:

SCE has further analyzed conditions surrounding each oil well. The three wells were identified in review of California Division of Oil, Gas & Geothermal Resources well finder database. Refer to attached map and pdf packet for the requested well information. Well #03705799 was abandoned properly in 1925 and was located just west of the project area. Well #03705181 was abandoned properly in 1919 and was located in the southwestern portion of the project area. Well #03712269 was drilled in 1918 and abandoned "in its present condition" in 1920. No oil was reportedly discovered in any of the wells and none are owned by SCE. Other than observing ground conditions in the areas of the wells during construction, SCE is not planning to conduct abandonment work at any of the locations as part of the proposed project.
