Case Worker: SM  
Local Agency: Not reported  
RB Case Number: 9UT536  
LOC Case Number: Not reported  
File Location: Local Agency  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: According to information provided to DEH, the USTs at the site were installed in 1960. On December 28, 1984 the UST operator reported a broken elbow where an estimated 3,000 gallons leaked from the UST system. At least four other unauthorized releases have also been alleged. Over the past 25 years, several borings and monitoring wells have been installed at the site. Liquid-phase hydrocarbons (LPH) have been detected at the site at a thickness up to 3.6 feet and LPH bailing has been conducted sporadically over the years. Based on existing information, dissolved-phase hydrocarbons appear to be migrating offsite to the south across 5th avenue. The RP has been directed to finish site assessment activities and prepare and implement an IRAP.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

**PALOMAR PLATING CO (Continued)**

**1000334325**

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006  
Waste name: CADMIUM

Waste code: D007  
Waste name: CHROMIUM

Waste code: D008  
Waste name: LEAD

Waste code: D035  
Waste name: METHYL ETHYL KETONE

Violation Status: No violations found

CA WDS:

Facility ID: San Diego 371002891  
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.  
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**Hazardous Waste Summary:**

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D008
Waste name:	LEAD

Waste code:	F003
Waste name:	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code:	F005
Waste name:	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status:	No violations found

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: Not reported  
 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**FINDS:**

Registry ID: 110002832436

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Local Agency: SAN DIEGO COUNTY LOP  
 RB Case Number: 9UT3600  
 LOC Case Number: H05205-004  
 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History: On December 9, 1997 four underground storage tanks were removed from the site. Free product was noted in the tank excavation. Additionally, soil sampling was conducted. As a result of laboratory results and field conditions, Unauthorized Release H05205-004 was opened. Site assessment is ongoing. This site is currently commingled with H20331-002 and the responsible party has applied to the commingled plume fund. Please see submitted ESI data for further details.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type: Cleanup Program Site  
Case Worker: SJP  
Local Agency: Not reported  
RB Case Number: 2090033  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil  
Potential Contaminants of Concern: Not reported  
Site History: The property was operated as a dry cleaning facility for a period of about 20 years until November of 1987, when PCE contamination was found in soil and groundwater. The Ullman's A groundwater extraction system operated from August 1990 to 1997. In May of 1995 the contaminant plume was extensive with the southernmost well (MW-27 which was located on the other side of Escondido Boulevard) exhibited a PCE level of 6,820 ppb. The former owners (the Ullmans) were financially unable to pay for additional cleanup, no cleanup fund has been established to resolve the financial impasse. In April 2002, George Kelly purchased the property. A cost recovery letter was sent to Mr. Kelly in July 2002 and June 2003. The letter was never signed. A cleanup and abatement order was issue on January 27, 2009. The site is currently being used as a driving school.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Status Date: 01/30/2002  
 Lead Agency: SAN DIEGO COUNTY LOP  
 Case Worker: CB  
 Local Agency: SAN DIEGO COUNTY LOP  
 RB Case Number: 9UT3600  
 LOC Case Number: H05205-004  
 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History: On December 9, 1997 four underground storage tanks were removed from the site. Free product was noted in the tank excavation. Additionally, soil sampling was conducted. As a result of laboratory results and field conditions, Unauthorized Release H05205-004 was opened. Site assessment is ongoing. This site is currently commingled with H20331-002 and the responsible party has applied to the commingled plume fund. Please see submitted ESI data for further

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SLIC:

Region:	STATE
<b>Facility Status:</b>	<b>Open - Site Assessment</b>
Status Date:	01/01/1998
Global Id:	SL0607335843
Lead Agency:	SAN DIEGO RWQCB (REGION 9)
Lead Agency Case Number:	Not reported
Latitude:	33.1097797965578
Longitude:	-117.076457440853
Case Type:	Cleanup Program Site
Case Worker:	SJP
Local Agency:	Not reported
RB Case Number:	2090033
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Not reported
Site History:	The property was operated as a dry cleaning facility for a period of about 20 years until November of 1987, when PCE contamination was found in soil and groundwater. The Ullman's A groundwater extraction system operated from August 1990 to 1997. In May of 1995 the contaminant plume was extensive with the southernmost well (MW-27 which was located on the other side of Escondido Boulevard) exhibited a PCE level of 6,820 ppb. The former owners (the Ullmans) were financially unable to pay for additional cleanup, no cleanup fund has been established to resolve the financial impasse. In April 2002, George Kelly purchased the property. A cost recovery letter was sent to Mr. Kelly in July 2002 and June 2003. The letter was never signed. A cleanup and abatement order was issue on January 27, 2009. The site is currently being used as a driving school.

 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Benzene, Toluene, Xylene, Diesel, Gasoline  
 Site History: Contamination was discovered on site when samples of ground water and soil vapor were analyzed during a Phase I Environmental Site Assessment in April, 2001. The samples indicated TPH and oxygenates (BTEX) in the gasoline and diesel ranges. Additional site assessment included installation and sampling of soil borings and groundwater monitoring wells beginning in 2001. Groundwater monitoring is ongoing

in 6 groundwater monitoring wells. Through sampling and monitoring an area of soil estimated to be up to 925 cubic yards was identified as containing TPH in excess of 1000 ppm in the southeast corner of the site. A groundwater plume of TPH, BTEX, and naphthalene was also identified on the southern portion of the property that is currently migrating off-site to the south with the groundwater gradient. DPE was approved as a remediation strategy in the corrective action plan (CAP) approved on 6/14/06 and in the addendum to the CAP approved on 6/23/09. Please see the Environmental Data tab for additional site specific information.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: P001  
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042  
Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075  
Waste name: NICOTINE, & SALTS

Waste code: P081  
Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

**S107450233**

Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: This case was opened after MTBE concentrations in an onsite monitoring well (MW12) increased from 25 ug/l in January 15, 2004 to 51,000 ug/l in December 16, 2004. The well was being monitored by Chevron, the previous station owner under the investigation for case H05714-001. The Chevron Station underground storage tank system was removed from the site in 2000. The station was developed as a Vons station in 2003 and the release was attributed to Vons Companies Inc. (Vons). Vons petitioned the State Water Resources Control Board (SWRCB) stating they had ceased using MTBE in 2003. In 2009, the SWRCB did not accept their petition citing that the petition failed to raise substantial issues that were appropriate for review. Three monitoring wells (KMW15-KMW17) and 21 soil vapor probes were installed to assess the extent of MTBE onsite. Soil samples collected to a depth of twenty feet below grade during monitoring well installation were analyzed for gasoline, volatile organic compounds (VOCs) and MTBE and no chemicals of concern were detected above the method reporting limits. A sample from a drum of soil of the spoils of soil vapor probe installation was analyzed for waste profiling and MTBE was not detected. Total TPH was detected at 350 mg/kg and several VOCs were detected. This soil is a composite of soil from all over the station and the TPH was reported to be mostly in the diesel fuel range. The source of the VOC contaminated soil is likely from the area near the dispenser island where VOCs were detected in soil gas (probe SV9). There is no apparent impact to groundwater from this soil. Soil gas probes were installed at 12 locations on-site at depths of 5 feet and some at 15 feet (nested). The vapor probes were sampled on three occasions and analyzed for VOCs by EPA Method 8260B in an on-site mobile laboratory. MTBE was not detected in any of the samples. Naphthalene was detected in the samples from SV9 in all rounds and also in a method blank in one round. Other VOCs were detected at sample location SV9 near a dispenser island. The maximum concentrations of VOCs detected in soil gas were used in the SAM Vapor Risk model and were below the acceptable excess threshold cancer risk (one in one million) and hazard index (1.0). There is no apparent impact to groundwater from the vapor detected at SV9. Three groundwater monitoring wells (KMW15-KMW17) installed as part of this investigation and one existing well MW12, belonging to Chevron, were monitored as part of this investigation. Four quarters of groundwater sampling were completed from December 2010 through September 2011 and MTBE was only detected in groundwater from well MW12 at a maximum concentration of 2.4 ug/l. This concentration is below the maximum concentration level of 13 for MTBE. MW12 is the down-gradient well. The consultant stated based on the lack of the detection of MTBE in groundwater, soil, and soil vapor further assessment of the site does not appear warranted, and requested case closure. DEH concurs that the release that was discovered in 2004 does not appear to have had residual effects on-site and is not evident in the groundwater on-site. The consultant concluded that there are no apparent risks to human health or the environment, therefore, DEH concurs with closing this case.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008  
Waste name: LEAD

Waste code: D018  
Waste name: BENZENE

Waste code: D001

their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency: SAN DIEGO COUNTY LOP  
 RB Case Number: 9UT1961  
 LOC Case Number: H12653-002  
 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History: In April 1991, new product piping and dispensers were installed at the site. Regulatory directed soil sampling indicated a release of petroleum hydrocarbons had occurred and an unauthorized release was assigned. Multiple borings and wells were installed at the site in order to assess soil and groundwater impacts. Seven quarterly overpurge events were conducted in an effort to mitigate high MTBE concentrations ultimately removing around 1,430 gallons of hydrocarbon-impacted groundwater. In addition, a 24-hour dual-phase extraction event was conducted where 47.4 pounds of hydrocarbons were removed. Based on recent data, it appears that the plume is assessed and attenuating. CAP submitted and Natural Attenuation approved.

Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT2425
LOC Case Number:	H05186-004
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Environmental assessments have been conducted on and off-site since December 1989, resulting in the installation of 16 groundwater monitoring and two air sparging wells. The site data indicates the western and southwestern portions of the site appear to be the main source areas of hydrocarbon impact. Remedial options are currently be assessed and evaluated for this site, and additional remedition activities are expected to be implemented. Please see the Environmental Data tab for additional site specific data.

 Alternate City,St,Zip: ESCONDIDO, CA 92029  
 Background Info: continued until 1981 when the Chathams sold the property, which eventually reverted back to the Chathams when the buyer filed for bankruptcy.

Not reported  
 In 1982, the California Department of Health Services (DHS), the predecessor agency of the California Department of Toxic Substances Control (DTSC), and other governmental agencies became aware of the existence of hazardous chemicals at the Yard and began various phases of site investigation and remedial activities. The Yard was fenced in 1984. In June 1985, Chatham Brothers Barrel Yard Site (Site) was listed in the Bond Expenditure Plan making it a "State Superfund Site."  
 Not reported

MAP FINDINGS  
FOCUS MAP 14

**1000857048**

On January 23, 1986, DHS issued an administrative Remedial Action Order to the Chathams requiring them to complete the Remedial Investigation and Feasibility Study and identify the final cleanup options in a remedial action plan. The Chathams did not comply with the Order, claiming lack of funds. DTSC made a Determination of Non-Compliance and commenced a State funded remediation program.

Not reported

In 1986, a Site Remedial Investigation was performed to determine the nature and extent of soil contamination, and whether the groundwater contamination beneath the Yard existed. The soils inside the Yard were found to be contaminated with polychlorinated biphenyls (PCBs), volatile organic compounds (VOCs), semi-volatile organic compounds and metals. Groundwater contamination was found beneath the Yard. Forty cubic yards of contaminated soil was removed from different areas along Bernardo Avenue on April 21 and 22, 1987. Further soils and hydrogeologic investigations were conducted in 1988 and 1989 to define concentrations and quantities of soil contamination, and to determine whether groundwater contamination has migrated outside of the Yard. Groundwater contamination was found to have migrated outside of the Yard and soil contamination was determined to be a source of groundwater contamination.

Not reported

Commencing in March 1990, DHS conducted a Removal Action (RA) at the Yard to reduce the potential for further degradation of groundwater. The work included excavation, removal, and offsite disposal of 11,430 tons of highly contaminated soils; removal of 208 surface drums and 10 buried drums; and rehabilitation of a 5-foot diameter, 68-foot deep hand dug well located inside the Yard into a 12-inch diameter well. The RA, performed under an imminent or Substantial Endangerment Order issued in November 1989, was completed in June of 1990, and cost approximately \$3 million. The soils at the Yard are now considered stabilized. Surface water contamination migration was decreased by the RA activities.

Not reported

Seven groundwater monitoring wells and three 100-foot monitoring wells were installed in September of 1990 and May 1991 to determine the extent of vertical and horizontal contamination. Groundwater contamination has been identified both inside and outside the Yard. In 1991, DTSC determined that significant VOCs contamination existed up to depths of 50 feet and 100 feet in the groundwater beneath the Yard.

Not reported

In December 1990, DTSC began sending Information Request Letters to approximately 180 Generator Potentially Responsible Parties (PRPs) who may have sent waste materials to the Yard. DTSC evaluated the responses of the 180 PRPs, and identified 96 to whom Special Notice Letters were sent. In January 1992, DTSC notified the 96 PRPs that they should form a steering committee to begin "good faith" negotiations to remediate the Site and to reimburse DTSC for past costs.

Not reported

As a result of these negotiations, an administrative Imminent and Substantial Endangerment Order & Consent Order was signed

MAP FINDINGS  
FOCUS MAP 14

Map ID Site Database(s) EPA ID Number

**CHATHAM SITE PRP GROUP (Continued)**

**1000857048**

on November 16, 1992 between DTSC and approximately 55 PRPs. Two "Cash Buy-Out" Consent Decrees were signed between DTSC and 16 additional PRPs and lodged in a federal court on October 12, 1993.

Not reported

The Consent Order called for, among other things, immediate construction and operation of a pump and treat system to remove the highly contaminated groundwater beneath the Yard; completion of the Remedial Investigation and Feasibility Study; preparation of a Remedial Action Plan; and payment of \$4 million to DTSC for past costs. Settling PRPs and DTSC negotiated another agreement for the implementation of the RAP.

Not reported

Signatories to the two "Cash Buy-Out" Consent Decrees, who are de minimis PRPs, paid DTSC approximately \$328,000 and \$128,000 respectively, for DTSC's past costs in accordance with their volumetric share of waste sent to the Yard. Also, these PRPs established an approximately \$1.7 million escrow account for their share of future Site remediation costs.

Not reported

Since the signing of and pursuant to the November 16, 1992 Consent Order, the following major activities were completed:

Not reported

- 1) \$4,000,000 paid for DTSC's past costs;
- 2) The interim Groundwater Removal Facility was tested in December 1993 and became fully operational in February 1994;
- 3) Field activities for the RI were completed on February 7, 1995, site investigation of Robert Chatham's property located at 1261 Gamble Lane, Escondido, occurred during the period of April 3-13, 1995;
- 4) The RI Report was approved in March 1996. Results of groundwater sampling indicate that substances of concern have migrated to downgradient areas outside of the Yard and the contaminated groundwater plume extends approximately 5,000 feet southeast of the Yard, in the area of Felicita Park.
- 5) The Human Health Risk Assessment and Screening Ecological Evaluation Report was approved on August 7, 1996.
- 6) The Feasibility Study (FS) was approved on Dec. 20, 1996. Commencing in the early 1940s, Chatham Brothers Barrel Yard (Yard) was operated as a waste oil and solvent recycling and bulk petroleum facility. In later years, the facility handled
- 7) The Remedial Action Plan (RAP) was approved on January 20, 1998.

Not reported

A very low concentration of trichloroethylene (below MCLs) was detected in the farthest water table monitoring well located at Felicita Park.

Not reported

Lake Hodges, a drinking water source, is more than a mile away from the known leading edge of the groundwater plume. Moreover, no reported private and public production well & are being used for drinking.

Not reported

Based on the sampling results, the Human Health Risk Assessment and Screening Ecological Evaluation (HHRASEE) was conducted. The goal of the HHRASEE was to determine the

MAP FINDINGS  
FOCUS MAP 14

Map ID Site Database(s) EPA ID Number

**CHATHAM SITE PRP GROUP (Continued)**

**1000857048**

potential impacts that contaminants from the Yard could have on human health and the environment. Health effects were evaluated for cancer-causing and non-cancer causing effects. Not reported

Results of the human health risk assessment indicated that the potential increase of risk for residents living outside the Yard is negligible, even when assuming that ingestion of soil and groundwater would occur. The screening ecological evaluation indicated that a wide variety of plants and animals live within a one-mile radius of the Yard. While some special and sensitive species may occasionally live on the Yard, this evaluation concluded that no wildlife was found to be affected by contamination from the Yard.

Not reported

The FS evaluated remedial alternatives for the Site. Cleanup alternatives were evaluated using the nine criteria of the US Environmental Protection Agency. The soil alternatives selected for evaluation included no action, excavation, treatment, covering the soil with a cap, disposal of excavated soil outside the Yard, fencing, and monitoring and maintaining the cap. The groundwater alternatives selected for evaluation included no action, pumping and treating areas with high concentrations of contaminants, air sparging, monitoring groundwater to demonstrate whether areas of low concentrations of contaminants would be cleaned up by natural attenuation, remedy evaluation, proper disposal of treated water and deed restrictions.

Not reported

The approved RAP included the following remedies, for the soil:

1) soil cap, 2) soil vapor excavation; 3) excavation and offsite disposal of contaminated sediments outside of the Yard and 4) deed restrictions. The selected groundwater remedy includes: 1) extraction of groundwater inside and outside of the Yard, 2) groundwater treatment using air stripping or UV/Chemical oxidation, 3) natural attenuation of low concentrations down a gradient plume 4) institution controls such as a deed restriction, wellhead treatment, and public notifications, 5) development of a Monitoring and Contingency Plan to address any "unstable" contaminated groundwater/surface water, 6) a remedy evaluation after three years, and 7) operation and maintenance of the implemented remedies.

Not reported

Not reported

chlorinated solvents and waste oil that were sent to the Yard mostly by local businesses in the area. These operations

 RB Case Number: 2090900  
 File Location: Regional Board  
 Potential Media Affected: Surface water, Well used for drinking water supply  
 Potential Contaminants of Concern: Not reported  
 Site History: Commencing in the early 1940s, Chatham Brothers Barrel Yard (Yard) was operated as a waste oil and solvent recycling and bulk petroleum facility. In later years, the facility handled chlorinated solvents and waste oil that were sent to the Yard mostly by local businesses in the area. These operations continued until 1981 when the Chathams sold the property, which eventually reverted back to the Chathams when the buyer filed for bankruptcy. In 1982, the California Department of Health Services (DHS), the predecessor agency of the California Department of Toxic Substances Control (DTSC), and other governmental agencies became aware of the existence of hazardous chemicals at the Yard and began various phases of site investigation and remedial activities. The Yard was fenced in 1984. In June 1985, Chatham Brothers Barrel Yard Site (Site) was listed in the Bond Expenditure Plan making it a "State Superfund Site." On January 23, 1986, DHS issued an administrative Remedial Action Order to the Chathams requiring them to complete the Remedial Investigation and Feasibility Study and identify the final cleanup options in a remedial action plan. The Chathams did not comply with the Order,

**S104750005**

claiming lack of funds. DTSC made a Determination of Non-Compliance and commenced a State funded remediation program. In 1986, a Site Remedial Investigation was performed to determine the nature and extent of soil contamination, and whether the groundwater contamination beneath the Yard existed. The soils inside the Yard were found to be contaminated with polychlorinated biphenyls (PCBs), volatile organic compounds (VOCs), semi-volatile organic compounds and metals. Ground- water contamination was found beneath the Yard. Forty cubic yards of contaminated soil was removed from different areas along Bernardo Avenue on April 21 and 22, 1987. Further soils and hydrogeologic investigations were conducted in 1988 and 1989 to define concentrations and quantities of soil contamination, and to determine whether groundwater contamination has migrated outside of the Yard. Groundwater contamination was found to have migrated outside of the Yard and soil contamination was determined to be a source of groundwater contamination. Commencing in March 1990, DHS conducted a Removal Action (RA) at the Yard to reduce the potential for further degradation of groundwater. The work included excavation, removal, and offsite disposal of 11,430 tons of highly contaminated soils; removal of 208 surface drums and 10 buried drums; and rehabilitation of a 5-foot diameter, 68-foot deep hand dug well located inside the Yard into a 12-inch diameter well. The RA, performed under an imminent or Substantial Endangerment Order issued in November 1989, was completed in June of 1990, and cost approximately \$3 million. The soils at the Yard are now considered stabilized. Surface water contamination migration was decreased by the RA activities. Seven groundwater monitoring wells and three 100-foot monitoring wells were installed in September of 1990 and May 1991 to determine the extent of vertical and horizontal contamination. Groundwater contamination has been identified both inside and outside the Yard. In 1991, DTSC determined that significant VOCs contamination existed up to depths of 50 feet and 100 feet in the groundwater beneath the Yard. In December 1990, DTSC began sending Information Request Letters to approximately 180 Generator Potentially Responsible Parties (PRPs) who may have sent waste materials to the Yard. DTSC evaluated the responses of the 180 PRPs, and identified 96 to whom Special Notice Letters were sent. In January 1992, DTSC notified the 96 PRPs that they should form a steering committee to begin "good faith" negotiations to remediate the Site and to reimburse DTSC for past costs. As a result of these negotiations, an administrative Imminent and Substantial Endangerment Order & Consent Order was signed.

2257 BERNARDO AVENUE  
ESCONDIDO, CA 92025**

**CA BOND EXP. PLAN S100833381  
N/A**

**CA BOND EXP. PLAN:**

Reponsible Party: DETAILED SITE EXPENDITURE PLAN  
 Project Revenue Source Company: Not reported  
 Project Revenue Source Addr: Not reported  
 Project Revenue Source City,St,Zip: Not reported  
 Project Revenue Source Desc: It appears at this time that it will continue to be necessary to utilize Bond funds to remediate this site. The Department will undertake appropriate cost recovery action. This site has not been identified as a National Priorities List (NPL) site, nor does it appear to be a likely NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for this site.

Site Description: The site was formerly a permitted industrial waste recycling and disposal facility that closed in 1982. Various industrial solvents and waste oil were brought to the facility by local businesses in the area.

Hazardous Waste Desc: Soils are contaminated by heavy metals, polychlorinated biphenyls (PCBs), volatile organics (VOCs) and base/neutral organic compounds. VOCs were detected in samples collected from an onsite ground water monitoring wells.

Threat To Public Health & Env: There is a threat of ground water contamination. Although the use of the upper aquifer in the immediate area is limited to irrigation, there is a potential for migration of site contaminants. There is also a threat of human exposure by direct contact to contaminated soils onsite and to runoff during rainfall.

Site Activity Status: DHS issued a remedial action order to potentially responsible parties (PRPs) in January, 1986. The PRPs failed to respond and were found in noncompliance with the order in April, 1986. The Department is preparing an engineering and cost

underground storage tanks (USTs), one diesel UST, six fuel dispenser islands with associated product piping, and a station building. An unauthorized release case was opened at this site based on the findings obtained during a Phase II Environmental Site Assessment investigation conducted at the site during April 2007. The laboratory analytical results for the soil samples were low concentrations of total petroleum hydrocarbons in the diesel range (TPH-d), methyl tertiary butyl ether (MTBE), and tertiary butyl alcohol (TBA). Grab groundwater samples were also obtained from 22 to 28 feet below ground surface (bgs) in the open boreholes. The laboratory analytical for the groundwater samples indicated a more significant impact by gasoline, diesel, MTBE, TBA, and tert-amyl-methyl ether (TAME). The subsequent investigations include the installation of six monitoring wells; monitoring well MW-3 was not installed since the drill rig hit refusal at 8.5 feet bgs. TPH in the gasoline range (TPH-g) was observed in one of the soil samples, but the laboratory flagged the sample since the chromatogram did not match the standard for gasoline. The site is underlain with alluvial river deposits. The alluvium consists of consolidated silty sand with gravel and clay. Most of the samples collected were reported to be in the TPH diesel range, but most of these samples were flagged by the laboratory since the chromatogram did not match the standard for diesel. The highest concentration of diesel found at 620 milligram per kilogram (mg/kg) did match the diesel standard. This sample was obtained under a driveway and does not appear to be from the underground storage tank (UST) system. The consultant has estimated there is approximately 12.6 cubic yards of soil remaining with a TPH concentration greater 100 mg/kg located at a depth of 10 feet bgs remaining at the site. According to the consultant, the remaining soil contamination is not contributing to dissolved phase of hydrocarbons and remediation is not necessary. Groundwater monitoring has been conducted at the site since March of 2008. The groundwater plume has been adequately delineated since further assessment southeast of monitoring well MW-5 is limited due a steep hill and the location of the Interstate-15 freeway and overpass. The site is located within the Hodges Hydrologic Area which is designated as a beneficial use basin. Groundwater is found between 15 and 27 feet bgs, and flows generally to the southeast. The results of the groundwater monitoring conducted at the site indicate a decreasing trend of dissolved contaminants. The consultant has calculated that the time it will take for TPH-g, MTBE and TBA to attenuate to the Water Quality Objectives will be by December 2015, With the decreasing concentrations of contaminants observed over time, the consultant has stated the dissolved plume has been defined to the extent practicable, and the Department of Environmental Health (DEH) concurs with this statement. A sensitive receptor survey was conducted in 2008 for the site, and the results indicated there was one public drinking water well and five other wells located with a mile radius of the site. None of these wells were located down gradient from the site. An additional survey was conducted four years later and two additional irrigation wells were found down gradient and within the mile radius. One of the irrigation wells is currently inactive and the other is used for local irrigation only. There are two unauthorized release cases located down gradient from this site and their up gradient wells are clean, therefore the dissolved contaminants from this site are not migrating and are not a threat to the irrigation wells. The closest surface water body to the si

Used oil transporter: No

Historical Generators:

Date form received by agency: 09/27/1993  
Facility name: KITS CAMERAS 1 HOUR NO 109  
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D011  
Waste name: SILVER

Violation Status: No violations found

FINDS:

Registry ID: 110002610470

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008  
 Waste name: LEAD

Waste code: D018

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**LUST:**

Region:	STATE
Global Id:	T0607300300
Latitude:	33.068095
Longitude:	-117.0665493
Case Type:	LUST Cleanup Site
Status:	Open - Remediation
Status Date:	09/01/1989
Lead Agency:	SAN DIEGO COUNTY LOP
Case Worker:	CF
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT1479
LOC Case Number:	H13495-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Soil contamination was discovered during a underground storage tank removal in 1989. The site is currently undergoing joint groundwater monitoring with the neighboring Shell Station case H13189-002. See Environmental data tab for additional information.

Hazardous Waste Summary:

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D011  
Waste name: SILVER

Violation Status: No violations found

Registry ID: 110002610470

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008  
Waste name: LEAD

Waste code: D018

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004  
Waste name: ARSENIC

Waste code: D005  
Waste name: BARIUM

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

Registry ID: 110013308615

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The station was constructed in 1963 and was equipped with two 5,000-gallon and one 8,000-gallon fuel underground storage tanks (USTs) and one 550-gallon waste oil UST. These tanks were located in the northern portion of the site. An additional or replacement UST was installed in 1970. In 1982, the original station was demolished, and the new USTs were installed in the southern portion of the site. An unauthorized release case H21324-001 was opened based on soil sampling analytical results obtained during dispenser upgrade activities conducted in 1997. One soil sample was taken beneath the diesel dispenser at four feet below ground surface (bgs). The analytical results were 9,200 milligrams per kilogram (mg/kg) of total petroleum hydrocarbons in the diesel range (TPH-D). The initial assessment activities included the drilling of two soil borings adjacent to the diesel dispenser. One of the borings encountered a seven foot drainage pipe at 10.5 feet bgs and was terminated. Groundwater was encountered at approximately 20.5 feet in the deepest boring and a groundwater grab sample was obtained. The laboratory</p>	HIST CORTESE LUST	S105126364 N/A

analytical results for the groundwater grab sample did not contain TPH - D; however the sample did contain concentrations of TPH in the gasoline range (TPH-G), Benzene and MTBE, up to 130,000 g/l, 2,600 g/l and 130,000 g/l respectively. Initially, six groundwater monitoring were installed to define the extent of groundwater contamination. Due to planned redevelopment of the site, three temporary well points were installed in October 2003, a month before the tank removals, for due diligence. The laboratory analytical results indicated significant impacts from TPH-G with concentrations up to 2,230 mg/kg in soil, and 88,600 g/l present in the groundwater, in the area of pre-1982 tank excavation. For the redevelopment, the existing underground storage tank system located in the southern portion of the site was removed on November 14, 2003. Due to the presence of a large concrete slab underlying the entire excavation, sampling of native soil beneath the underground storage tanks was not possible. Sampling was conducted from the excavation sidewalls at locations corresponding to the ends of the tanks. Soil sampling analytical results indicated that TPH-D concentrations were observed at 4,300 mg/kg in the tank excavation and up to 740 mg/kg at the dispensers. TPH-G range was observed up to 23 mg/kg in the tank excavation. A work plan, prepared by NorthShore Engineering Inc., to overexcavate impacted soil during the tank removal activities was approved on November 6, 2003. However, there was no report submitted regarding this work; so it is assumed the work was not done. Monitoring well MW-5 was destroyed during the tank removal activities, but was later replaced by monitoring well MW-05R. Monitoring well MW-6 was also inadvertently damaged during the redevelopment of the site and was also later replaced by monitoring well MW-06R. Additionally, monitoring wells MW-08 thru MW-10 were installed to delineate the groundwater plume and four hydropunch borings were advanced to assess the area of the former original tank pit (pre-1982), discovered at the northern end of the site. The soils encountered during the investigations were described as poorly graded silty sand to approximately 6 to 10 feet below ground surface (bgs) and decomposed granite at approximately 10 feet bgs and deeper. Based on the all of the soil sampling results the consultant estimated there is approximately 154 cubic yards of TPH impacted soil, with a concentration greater than 100 mg/kg, remaining in the shallow soil, mostly in the vicinity of the former southern dispenser island. Additionally, the consultant estimated that 444 cubic yards of T

Hazardous Waste Summary:

Waste code: D000  
Waste name: Not Defined

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**RANCHO BERNARDO TEXACO (Continued)**

**S104576317**

dispenser upgrade activities. Based on the analytical results of the soil samples, case H05797-002 was opened in February 2003. On November 26, 2002, remedial excavation occurred beneath the fuel dispensers to approximately 9 feet below ground surface. Approximately 15.3 cubic yards of impacted soil was removed from the site. Confirmation soil samples results showed that the remedial excavation was effective. Between January 2004 and November 2005, nine soil borings (B-1 through B-9) were advanced and five groundwater monitoring wells (MW-01, MW-03 through MW-06) were installed. Soil testing during product piping/fuel dispenser upgrades and site assessment activities demonstrates that soil contamination is defined vertically and horizontally and is limited on-site in the areas of the fuel dispensers. The consultant estimates 291 cubic yards of impacted soil (greater than 100 mg/kg total petroleum hydrocarbons) remains on-site. Between June 2005 and June 2011, the groundwater was monitored and sampled. The groundwater monitoring demonstrates that groundwater flow direction is to the west at a general gradient of 0.02 foot per foot. It also demonstrates that the dissolved-phase contaminant plume is defined and appears to be limited to the site, with the exception of the leading edge of the TBA plume extending approximately 20 feet into Pomerado Road and Rancho Bernardo Road. Between September 2005 and June 2011, surface water samples were collected from a concrete-lined riverine that runs beneath the site and daylights to the south (up-gradient) and again approximately 250 feet northwest (down-gradient) of the site. Surface water samples were collected up-gradient and down-gradient of the site. The analytical results were reported below laboratory reporting limits for all constituents except for 140 micro grams per liter (ug/L) TPHd in the up-gradient sample collected in May 2008, and 2.67 ug/L Toluene in the down-gradient sample collected in December 2005. TPHd and Toluene have only been detected one time throughout the surface water sampling events. The TPHd sample was flagged by the laboratory with the sample chromatographic pattern for TPH does not match the chromatographic pattern of the specified standard. The consultant states that based on historical riverine analytical data and the fact that the riverine is a concrete culvert beneath the site, the remaining dissolved-phase contaminants associated with the Site will not impact water in the riverine. The consultant concludes that the trend analysis demonstrates that the dissolved plume is stable in aerial extend and the contaminant concentrations are decreasing overtime. They have estimated that benzene will reach it primary maximum contaminant level (MCL) [1 ug/l] by 2017. MTBE has been below its secondary MCL (5 ug/l) since August 2007. TBA will reach its California Action Level (12 ug/l) by 2017. They have also concluded that the residual soil and groundwater contamination will not pose a risk to human health, nearby receptors, and/or the environment. According to the City of San Diego Department of Public Utilities, they have no plans to install water supply wells in the site vicinity. Based on available data, DEH concurs with the consultants conclusions.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110038709902

**Environmental Interest/Information System**

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

Registry ID: 110002877511

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110005996342

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Inspection Date: 03/03/2005  
 Violation Code: 6HV3152  
 Violation: ALL MAINT/MONITOR RECORDS NOT AVAILABLE  
 Violation Citation: All maintenance/monitoring/calibration/ repair records not available. 25293; 2712 (b)  
 Activity: ACTIVE

Facility Id: 114316  
 Update Date: 11/02/2012  
 Inspection Date: 05/29/2009  
 Violation Code: 6HV3192  
 Violation: NO D.O INSPECTION/INCOMPL;NO REPORTS  
 Violation Citation: Designated Operator monthly inspection not conducted or incomplete; or DO inspection reports not onsite 2715 (c)(d)(e)  
 Activity: ACTIVE

Facility Id: 114316  
 Update Date: 11/02/2012  
 Inspection Date: 05/29/2007  
 Violation Code: 6HV0138  
 Violation: NO TSDF SIGNED MANIFEST ONSITE  
 Violation Citation: Generator has not maintained the required signed copy of the hazardous waste manifest from the TSD facility on site for review. CCR 66262.40(a)  
 Activity: ACTIVE

Facility Id: 114316  
 Update Date: 11/02/2012  
 Inspection Date: 06/11/2012  
 Violation Code: 6HV4402  
 Violation: CHEMOWASTE NOT PROPERLY LABELED  
 Violation Citation: Generator did not properly label container holding chemotherapy waste with the words -chemotherapy waste- or other approved markings on the lid and sides. 118275(e)  
 Activity: ACTIVE

Facility Id: 114316  
 Update Date: 11/02/2012  
 Inspection Date: 06/15/2010  
 Violation Code: 6HV4209  
 Violation: NO GENERATOR'S INFO ON RED BAGS/SHARPS  
 Violation Citation: Red bags, sharps containers not labeled with generator's name, address, and phone number. 68.1205  
 Activity: ACTIVE

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005  
 Waste name: BARIUM

As a part of the removal process soil samples were collected beneath the USTs. Laboratory results indicated Total Petroleum Hydrocarbons as gasoline (TPHg) ranging from below laboratory reporting limit (ND) to 2,100 milligrams per kilogram (mg/kg). As a result, Unauthorized Release H20713-002 was opened. To mitigate hydrocarbons in soil observed following tank removal activities, approximately 582 tons of hydrocarbon impacted soil were excavated and treated offsite. Between 1999 and 2001, several site assessments were conducted to delineate the extent of hydrocarbons in soil and groundwater. During these assessments, TPHg concentrations in soil ranged from ND to 1.5 mg/kg, Xylene concentrations ranged from ND to 0.01 mg/kg, Methyl Tertiary Butyl Ether (MTBE) concentrations ranged from ND to 0.016 mg/kg. All other constituents in soil were not reported above laboratory reporting limits. The site is located in a basin designated for beneficial municipal, agricultural, and potential industrial service uses. Groundwater flow direction has been consistently towards the southwest. Groundwater monitoring wells installed onsite and offsite have shown that groundwater has been impacted by the unauthorized release. Quarterly groundwater monitoring and sampling has been conducted at the site from February 1999 through June 2008. Dissolved phase concentrations of TPHg, Benzene, Toluene, Ethylbenzene, Xylenes, Ethyl-tert-butyl ether, di-isopropyl ether, and tert-Amyl-methyl ether are below laboratory limits in all wells. Dissolved phase concentrations of MTBE and tert-Butyl Alcohol (TBA) have remained in wells MW-2 and MW-8 but show a decreasing trend. A receptor search was conducted within + mile radius of the site as a part of the Corrective Action Plan (CAP). One irrigation well was located. According to the consultant, this well is located hydraulically upgradient. There is no estimation of residual hydrocarbon impacts in soil, as they were removed during the 1998 tank upgrades. A trend analysis was completed to estimate the</p>	<p><b>HIST CORTESE</b>  <b>LUST</b>  <b>SLIC</b></p>	<p><b>S100731669</b>  <b>N/A</b></p>

timeframe for MTBE and TBA to reach their cleanup goals proposed in the CAP. According to the consultant, MTBE concentrations in monitoring wells MW-2 and MW-8 will reach the primary MCL in less than one year. TBA concentrations in monitoring wells MW-2 and MW-8 will reach their action level in four years and one and three quarters years, respectively. The consultant recommends no further action and DEH concurs with this recommendation.

Case Type:	LUST Cleanup Site
Status:	Open - Eligible for Closure
Status Date:	04/14/2014
Lead Agency:	SAN DIEGO COUNTY LOP
Case Worker:	TS
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
LOC Case Number:	202471-001
File Location:	Local Agency
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Waste Oil / Motor / Hydraulic / Lubricating
Site History:	A 550- gallon capacity waste oil tank was removed from the site on Jan. 25, 2005. Standing water with LPH and soil staining was observed in the excavation. Four groundwater monitoring wells were installed at the site in 2006 in the vicinity of the excavation. Groundwater (with designated beneficial uses) is generally present at a depth of approximately 20 feet bgs. MW-1, located in the tank pit, was screened to 21 ft. bgs, and is often dry, and has contained free product. The most downgradient well, MW-3 (located approx. 10' south of MW-1), often contains free product. Soil contamination in the MW-1 boring extended to approx. 25 ft. bgs. High MTBE concentrations (up to 1600 ug/l) have been detected. Benzene concentrations have not exceeded 12 ug/l. There are no apparent associated human health risks. Installation of three additional wells was requested in a DEH letter dated March 7, 2008 to delineate the extent of contamination, and a Revised Workplan for Well Installation was been approved Oct. 8, 2009. Three wells (MW-5, MW-6, and MW-7) were installed at the site in December 2009, and three sampling events were conducted in January, March, and June 2010. No VOCs were detected in the groundwater samples or soil borings. Free product was measured in MW-3; MW-1 was dry, and 200 ug/l MTBE was detected in MW-2 in June 2010. A work Plan for an additional off-site well to delineate the southern, downgradient extent of soil and groundwater contamination was approved by DEH on March 8, 2011.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Case Worker: NS  
 Local Agency: SAN DIEGO COUNTY LOP  
 RB Case Number: 9UT2171  
 LOC Case Number: H03459-002  
 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Diesel, Gasoline  
 Site History: On January 1, 1991, diesel fuel was reported to be seeping into the Rattlesnake Creek near the site. US-EPA was notified of the release on April 15, 1993. The Federal On-Scene Coordinator for the EPA started an assessment investigation in the Rattlesnake Creek and in the soil and groundwater at the site and at three adjacent properties. Six USTs were removed and several soil borings and monitoring wells were installed. Cleanup activities included excavation/disposal of impacted soil, soil vapor extraction and groundwater pump and treat systems. On June 5, 1995 the US-EPA reported the case status as closed. In 2001 the City of Poway Redevelopment Services conducted due diligence during acquisition of the site and performed a Phase I and Phase II subsurface soil investigations. Assessment of soil and groundwater contamination

MAP FINDINGS  
FOCUS MAP 19

Map ID Site Database(s) EPA ID Number

**QUIK CHEK GAS (Continued)**

**U000030217**

initially included advancing seven borings in June 2001, followed by the installation of five soil borings and nine monitoring wells. Soil contamination has been defined and groundwater plume is delineated. Other investigation activities at the site included evaluation of the vertical hydraulic gradient between groundwater and surface water in the Rattlesnake Creek, design and building of a culvert for a section of the Rattlesnake Creek, conduct a soil gas survey targeted at the soil beneath the office building, prepare human health risk calculation (highest risk of 4.32E-08 for MTBE), evaluate migration potential of the contaminants, prepare a degradation rate model for the contaminants of concern, and prepare a Corrective Action Plan. Total residual impacted soil was calculated to be 8,167 cubic yards with maximum gasoline concentration of 622 mg/kg and diesel of 347 mg/kg. The consultants conclude in their final report dated April 2, 2010, that dissolved TPH gasoline and diesel are non detect in all the monitoring wells. Dissolved benzene is detected only in one monitoring well at low concentration, dissolved MTBE ranges from non detect to low concentration, and overall migration of the dissolved plume is stable. They further conclude that the groundwater quality objectives will be met for MTBE within three to eleven years and for benzene within 44 years. The consultants propose natural attenuation as the cost effective option for corrective action at the site and recommend closure of the case. DEH concurs with this recommendation.

 Case Worker: EP  
 Local Agency: SAN DIEGO COUNTY LOP  
 RB Case Number: 9UT2173  
 LOC Case Number: H20714-002  
 File Location: Local Agency  
 Potential Media Affect: Other Groundwater (uses other than drinking water), Under Investigation  
 Potential Contaminants of Concern: Gasoline  
 Site History: Contamination was identified in 1991 through soil samples. Site investigation and site assesment activities have been ongoing on this site to determine the lateral and vertical extent of contamination. A health risk assessment is being conducted on this site to determine if any potential risk exists. Additional assessment is being conducted and groundwater monitoring to evaluate the contamination is ongoing. Please see the Environmental Data tab for additional site specific data.
