	Potential Media Affect:	Aquifer used for drinking water supply	
	Potential Contaminants of Concern:	Gasoline	
	Site History:	<p>This case was opened on February 28, 1994, following the discovery of dissolved phase gasoline constituents in a monitoring well (MW-16) installed in the sidewalk adjacent to the Chevron station by Shell Oil Company. The Shell station (Case H03181-001) is located south and down-gradient of the Chevron station at 12365 Poway Road. Soil samples were collected from soil borings, nine monitoring well borings, and from beneath the product line trenches during station upgrade activities. The soil data indicated that contaminated soil is present at the location of the former western dispenser area, near the current underground storage tanks (USTs) and at the former UST area and dispenser area in the southwest corner of the site. The contaminated soil is present at depths of 14 to 22 feet below ground surface (bgs). The consultant estimated that 318 cubic yards of contaminated soil remain onsite. Nine monitoring wells (four onsite and five offsite) were installed as part of the site investigation between 1996 and 2011. Groundwater monitoring began on April 24, 1996 and continued until April 26, 2012. Free product was observed in Shell well MW-16, located in the sidewalk adjacent to the Chevron Station from 4/20/1996 to 10/8/1996. Free product was not detected in any other site monitoring wells. Dissolved gasoline, benzene, ethylbenzene, toluene, xylenes, methyl tertiary butyl ether (MTBE) and tert butyl alcohol were detected in the groundwater in the source area monitoring wells (MW2 and/or MW3) and down-gradient (MW5). MTBE was also detected in offsite well MW7. Tert butyl alcohol (TBA) was detected in well MW2, MW3 and down-gradient well MW5. The consultant stated that the dissolved benzene and ethyl benzene plumes appeared to originate at the former UST and dispenser area at the southwest corner of the site. The benzene plume may extend offsite to well MW7. The MTBE and TBA plumes appear to have originated in the vicinity of the former western dispenser area. The MTBE plume has migrated offsite to well MW5 and was also detected in offsite well MW7. The plumes appear to be delineated and stable or decreasing in</p>

concentration. Groundwater in the area of the site is designated as having beneficial uses for municipal/domestic supply and agriculture, with potential beneficial use for industrial service supply. The depth to water has ranged from 7.0 to 18.19 feet below the top of casing. The calculated hydraulic gradient in April 2012 was 0.06 with groundwater flow to the west-southwest. The consultant contacted the City of Poway regarding potential water supply wells within one mile of the site. Mr. Howard from the City of Poway stated that the City of Poway does not operate any public supply wells. Active remediation of the soil or groundwater has not occurred at the site. A sensitive receptor survey conducted for the site identified sixteen wells from the USGS and Department of Water Resources databases located within a one-mile radius of the site. However, the consultant was not able to field verify the existence of any of these wells. An unnamed tributary to Poway Creek is located approximately 610 feet west of the site. The consultant stated that the creek is unlikely to be impacted from the site based on the distance. Other receptors including two ponds and several schools were eliminated from further consideration as sensitive receptors based on their distance from the site. The Meadowbrook Ecological Reserve is located approximately 1500 feet northwest of the site (up-gradient). The consultant stated that the Meadowbrook Ecological Reserve could be eliminated from consideration based on the distance from the site and the extent of the hydrocarbon plumes. Several subsurface utilities such as gas, electric, water, sewer and telecommunication lines were identified in the site vicinity. The consultant reported that a high pressure gas line is located beneath Pomerado Road at est

Environmental Interest/Information System  
US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES)  
is an federal online database for Brownfields Grantees to  
electronically submit data directly to EPA.

Registry ID: 110055770358

Environmental Interest/Information System  
Registry ID: 110002616928

Environmental Interest/Information System  
The NEI (National Emissions Inventory) database contains information  
on stationary and mobile sources that emit criteria air pollutants and  
their precursors, as well as hazardous air pollutants (HAPs).  
  
RCRAInfo is a national information system that supports the Resource  
Conservation and Recovery Act (RCRA) program through the tracking of  
events and activities related to facilities that generate, transport,  
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA  
program staff to track the notification, permit, compliance, and  
corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: P001  
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042  
Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075  
Waste name: NICOTINE, & SALTS

Waste code: P081  
Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Site History:

During the fall of 1988, the City of Poway was excavating a trench for a sewer line extension along the western side of Pomerado Road when they discovered gasoline saturated soil next to the Shell station. Based on the City's observations, case H03181-001 was opened on July 19, 1989. The groundwater has been monitored and sampled since March 1992. In August 1992, free product was discovered in MW-8. To date (4 Qtr 2009) free product still exists in MW-8. Free product has also been detected in MW-16 (located adjacent to upgradient Chevron) between April 1996 and December 2000, at a thickness ranging from 0.02 to 0.06 feet; trace free product detected in MW-6 in August 1992; 0.01 foot free product detected in MW-10 in December 2000. In November 2004, MW-16 and MW-17 were destroyed because they were located upgradient next to the Chevron and 76 stations, respectively. MW-16 and MW-17 were essentially duplicating data from the upgradient cases. In June 2004, three USTs, product piping, and dispensers were removed and replaced with two 20k-gallon (gasoline) and one 8k-gallon (diesel) USTs. Approximately 366 cubic yards of impacted soil was excavated and treated offsite. In November 2004, a soil vapor survey was conducted to evaluate potential health risks for soil vapor intrusion. The consultant concluded that the calculated risk is acceptable (less than 1E-6). For site specific

RB Case Number:	9UT4000
LOC Case Number:	H20709-003
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The site is a former Circle-K service station in Poway on the northwestern corner of the intersection of Pomerado Road and Oak Knoll Road, approximately 450 feet above mean sea level. The station formerly consisted of a 10,000-gallon gasoline underground storage tank (UST), a 6,000-gallon gasoline UST, two product dispensers at one island, and a convenience store building. The UST system, including dispensers, piping and vent lines, were removed in July 1999. The convenience store building was not demolished and still exists as an operating store at the site. A retail shopping center and Shell gas station are located north of the site. An office building is located to the west. A San Diego County Public Works Department facility is located across Oak Knoll Road to the south. Retail stores are located across Pomerado Road to the east. The vicinity generally consists of retail/office facilities with residences located within + mile. During UST system removal activities, soil samples were collected from the UST cavity and the dispenser island under the direction of the San Diego County Department of Environmental Health (DEH). Soil concentrations below the fuel USTs ranged from below the laboratory detection limit to 2,400 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as gasoline (TPHg) and 740 mg/kg total petroleum hydrocarbons as diesel (TPHd). Soil concentrations at the dispenser island were 2,900 mg/kg TPHg, 150 mg/kg TPHd, and 7.7 mg/kg benzene. Free product was observed on top of the soil in the tank cavity at approximately 13 feet below ground surface (bgs). However, groundwater was not observed. Limited over-excavation of soils in the tank cavity was performed down to approximately 14 feet bgs in order to remove the product-saturated soils. Based on the results of soil sampling conducted during station upgrade activities, DEH issued an unauthorized release letter dated December 2, 1999. This letter identified Tosco Marketing as the responsible party for the unauthorized release and required Tosco to implement initial

corrective action measures. On November 3, 2000, the DEH issued a follow-up letter stating that the site had been assigned to a Priority A classification under the State Water Resources Control Board (SWRCB) guidelines regarding methyl tertiary butyl ether (MTBE) since the DEH had not reviewed any groundwater data for the site at that time (SWRCB, 2000; DEH, 2000). In August 2000, four groundwater monitoring wells, MW-1 through MW-4, were installed at the site. Hydrocarbon concentrations in soil samples from borings MW-1, MW-3 and MW-4 ranged from below laboratory detection limits to 62 mg/kg TPHg, 0.93 mg/kg benzene and 3.1 mg/kg MTBE. Concentrations in soil samples collected from boring MW-2 were below their respective laboratory detection limits for all constituents analyzed. Dissolved-phase hydrocarbon concentrations in groundwater samples from monitoring well MW-2 were below laboratory detection limits. Dissolved-phase concentrations in wells MW-3 and MW-4 ranged from 130 micrograms per liter (&#956;g/L) to 5,300 &#956;g/L TPHg, 4.5 &#956;g/L to 260 &#956;g/l benzene, and 6.9 &#956;g/L to 180 &#956;g/L MTBE, respectively. Well MW-1 contained 0.05 foot of free product. Between February and April 2002, three groundwater monitoring wells, MW-5 through MW-7, were installed offsite. Dissolved-phase hydrocarbons in the new wells were not detected at or above laboratory detection limits except for 230 &#956;g/L MTBE detected in well MW-7 to the north. Based on these results and the interpretation of the flow direction, the lateral extent of dissolved-phase hydrocarbons appeared adequately assessed (TRC, 2002). In August and September 2004, TRC conducted feasibility testing of dual-phase extraction (DPE) as a remedial alternative. Approximately 198 pounds (33 gallons) of vapor-phase hydrocarbons were recovered during the DPE test. Approximately 450 gallons of groundwater were recovered

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW: Not reported  
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Description: Camp Elliot originally consisted of approximately 30,500 acres acquired between 1941 and 1942. Approximately 28,000 acres were acquired in fee by Declarations of Taking, and 2,500 acres were withdrawn from Public Domain lands. The Mission T The Navy obtained the site in 1941 for use as a training base for Marines until 1954. The property was transferred to the General Services Administration and then disposed of to private parties in the 1960s. Approximately 15,000 acres of la

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

	Hazardous Waste Summary:		
	Waste code: D000		
	Waste name: Not Defined		
	Waste code: D001		
	Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.		
	Waste code: D002		
	Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.		
	Waste code: D003		
	Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

**Hazardous Waste Summary:**

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004

Site History: The subject site is currently owned by KFMB properties. An estimated volume of 3,708 cubic yard of grit waste generated as part of wastewater treatment from a sweage treatment plant at Point Loma was

deposited at the subject site from July to August 1996. The grit waste contained low level concentrations of oil and grease, petroleum hydrocarbons, 1,4-dichlorobenzene, and several metals (lead, copper, and zinc). Investigations of the effect of grit disposal on surface water and groundwater at the subject site was conducted by the City of San Diego in 1996. It was concluded that the grit disposal sites will not result in exceedence of the water quality objectives in downstream ground or surface water. Based on the County's report, Best Management Practices (BMPs) including an earth berm (about 220 ft along Mast Blvd and 100 feet along West Hill Parkway) and cover material for the grit waste were constructed on the site sometime before June 2000. During a site inspection by Regional Board staff in November 2000, new wastes including bucket and drum that is suspected to contain motor oil and paint, and concrete rubble and light colored material were found at the site. The Regional Board has required additional investigation on those new wastes in a letter dated November 30, 2000. The site was regraded before June 10, 2005 according to a corresponse letter which is provided by KFMB and was from Rick Engineering Company to KFMB. The Regional Board staff performed site inspection on August 26, 2009, and found that the bucket and drum that is suspected to contain motor oil and paint no longer exist at the site. Further evaluation of the contaminant concentrations found in the grit waste confirm that the concentrations are below current human health and water quality screening values and therefore does not require any further cleanup action. The Regional Board issued NFA letter on October 19, 2009.

Site History:

On July 13, 2006, two underground storage tanks (USTs) containing gasoline, four fuel dispensers, and associated piping were removed from the site. Soil samples were collected from the bottom of the UST excavation and under each dispenser, and petroleum hydrocarbons were not detected in any of the soil samples. Volatile organic compounds were detected in soil samples collected from under the west end of UST T001 and the second dispenser. Methyl tert-butyl ether (MTBE) was detected in both samples at a maximum of 0.98 milligrams per kilogram (mg/kg). Based upon these results, Unauthorized Release case 124739-001 was opened. In 2006, DEH determined that there was a supply well located approximately 200 feet to the southwest of the site. Based upon the concentration of MTBE detected in the soil samples and the proximity to the well, DEH assigned a priority of A to the site and directed the assessment of MTBE impacts to soil and groundwater. In March 2010, four groundwater monitoring wells were installed on the site. Petroleum constituents were not detected in soil samples collected during drilling. Groundwater monitoring and sampling was completed in May 2010, August 2011, and June 2012. Groundwater levels were above the screened interval in groundwater monitoring wells MW-2 and MW-3 in May 2010, and in all of the monitoring wells in August 2011 and June 2012. Since petroleum constituents were not detected in any of the groundwater samples, DEH accepted the samples as representative of site conditions. The consultant concludes that groundwater was not impacted by the Unauthorized Release. Based upon soil staining observed during removal of the USTs, the consultant estimates that there is approximately 8.33 cubic yards of petroleum-impacted soil remaining on site. The mass of residual petroleum on site is estimated at less than 0.5 pounds. Given the small amount of contaminated soil remaining at the site and its location under asphalt, the consultant concludes that there is very low risk to human health. The consultant further concludes that the hydrocarbon contamination is unlikely to impact groundwater resources, including the supply well located to the southwest of the site. Based upon these conclusions, the consultant recommends no further action for the case. DEH concurs with the consultants conclusions and recommendation to close the case. Not reported

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## FEDERAL RECORDS

### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

### DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

## CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

## RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

## US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

## EDR PROPRIETARY RECORDS

### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

**California Earthquake Fault Lines:** The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
