Encinitas, California 92024

Attention: Mr. Armen Keochekian

Subject: ASTM Phase I Environmental Site Assessment  
Pipeline Safety & Reliability Project  
San Diego County, California

Ladies and Gentlemen:

The enclosed report presents the results of a Phase I Environmental Site Assessment (Phase I) conducted at the above-referenced property, in San Diego County, California (herein referred to as the "Proposed Project"). This work was performed by Haley & Aldrich, Inc. (Haley & Aldrich), in accordance with our proposal to Insignia Environmental dated 6 March 2014 ("Agreement") as authorized on 3 July 2014. This Phase I was conducted in conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule).

The objective of a Phase I is to assess whether known and suspect "recognized environmental conditions" (REC), historical RECs (HREC), or controlled RECs (CREC) are associated with the Proposed Project, as defined in the ASTM E 1527-13 Standard.

Thank you for the opportunity to perform these services for you. Please do not hesitate to contact us if you have any questions or comments.

Sincerely yours,  
HALEY & ALDRICH, INC.

Senior Vice President

Enclosures

## Executive Summary

Haley & Aldrich, Inc. (Haley & Aldrich) has performed a Phase I Environmental Site Assessment (Phase I) of the Pipeline Safety & Reliability Project property in San Diego County, California (herein referred to as the “Proposed Project”). The scope of work is described and conditioned by our proposal dated 6 March 2014. This Phase I was performed for Insignia Environmental to assist in preparing the hazardous materials evaluation section of a Proponent’s Environmental Assessment for the Proposed Project. This Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and [All Appropriate Inquiries \(AAI\) Rule](#)<sup>1</sup>. Deviations from this Standard are described in Section 1.4 of this report.

### **Proposed Project Description**

The Proposed Project involves the installation of a new 36-inch-diameter natural gas transmission line and associated facilities between the Rainbow Meter Station and the Line 2010 Intertie on MCAS Miramar. The Proposed Project will provide incremental increased capacity and improve the overall reliability of the San Diego Gas & Electric (SDG&E) gas transmission system. Several alternatives will be analyzed, including the Proposed Project.

### **Objective**

The objective of a Phase I is to assess whether “[recognized environmental conditions](#)” (REC), [historical RECs](#) (HREC), and controlled RECs (CREC) are associated with the Proposed Project. Our conclusions are intended to help the user evaluate the “[business environmental risk](#)” associated with the Proposed Project. Our opinion regarding an REC’s potential impact on the Proposed Project is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and on our understanding of the client’s intention to prepare a Proponent’s Environmental Assessment (PEA) for the Proposed Project.

### **Recognized Environmental Conditions**

The ASTM E 1527-13 Standard defines an REC in part as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a [material threat](#) of a future release to the environment.”

The following RECs listed below were identified in connection with the Proposed Project.

---

<sup>1</sup> American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) (“ASTM E 1527-13 Standard”). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

**REC #1:** Contaminated soil/groundwater from adjacent and nearby sites

Portions of the Proposed Project are located in an urban industrial area of San Diego County. Numerous releases of hazardous substances or petroleum products to soil and groundwater have been documented from adjacent and nearby sites. There is a potential that soil and/or groundwater beneath the Proposed Project has been impacted by these releases. Groundwater has been encountered between approximately 4 and 35 feet below ground surface at these sites. The pipeline will exceed the minimum depth of cover required by the U.S. Department of Transportation, which is typically 36 inches. Following is a list of adjacent and nearby sites that have documented soil/groundwater impacts and have the potential to impact soil/groundwater beneath the Proposed Project. Table I includes additional available information for each of these locations.

- Naton Tractor Inc, 4935 2nd St, Fallbrook.
- Rainbow Oaks, 4815 E 5th St, Fallbrook.
- Stewart Canyon Road and Old Highway 395, Fallbrook.
- Mobil Station 18-034, 4730 Hwy 76, Fallbrook.
- Champagne Texaco, 8808 Lawrence Welk Dr, Escondido.
- Vacant Lot, 26845 Mountain Meadow Rd, Escondido.
- Connecticut General Life Insurance/ McCleaners, 306 W. El Norte Pkwy, Escondido.
- E-Z Auto Repair, 1280 Escondido Blvd, Escondido.
- Shell Service Station, 340 W. Mission Ave, Escondido.
- Mobil Station 18-100, 502 W. Mission Blvd, Escondido.
- Golden State Gasoline, 225 W. Washington Ave, Escondido.
- Hoover Dry Cleaners, 370 W. Washington Ave, Escondido.
- Civic Center Plaza Mr. Terry 1-Hr Mart, 431 N. Escondido Blvd, Escondido.
- Dunn-Edwards Corp/7 Day Market, 503-506 W. Washington Ave, Escondido.
- North County Transit District, 755 Norlak, Escondido.
- Jim L Daniels, 520 W. Grand Ave, Escondido.
- USPS Escondido Station, 203 S. Orange St, Escondido.
- Thrifty Service Station #123, 434 W. 5th Ave, Escondido.
- Han's US Petroleum & Service, 445 W. 5th Ave, Escondido.
- Budget Gas, 510 W. 5th Ave, Escondido.
- Mobil Service Station #18-231, 450 W. 9th Ave, Escondido.
- 7-Eleven, 522 W. 9th Ave, Escondido.
- G&S Gasoline and MiniMart, 501 W. 9th Ave, Escondido.
- Schniepp Property, 1417 S. Escondido Blvd, Escondido.

- Chevron 9-3920, 469 W. Felicita Ave, Escondido.
- Gas and Save, 460 W. Felicita Ave, Escondido, CA.
- Camp Escondido.
- Shell Oil Products Co, 12472 Rancho Bernardo Rd, San Diego.
- Rancho Bernardo Texaco, 12507 Rancho Bernardo Rd, San Diego.
- 7-Eleven Food Store #13624, 13626 Pomerado Rd, Poway.
- Poway Econo Lube N Tube, 13506 Pomerado Rd, Poway.
- William P Racicot DDS, 13029 Pomerado Rd, Poway.
- Union Oil Service Station #488, 13012 Pomerado Rd, Poway.
- Chevron 94955, 12410 Poway Rd, Poway.
- Shell Service Station/Callaway Oil Inc, 12365 Poway Rd, Poway.
- Circle K, 12906 Pomerado Rd, Poway.
- Sycamore Canyon Facility, Raytheon Systems Co., 11393 Pomerado Rd, San Diego.

### **Controlled Recognized Environmental Conditions**

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the Proposed Project.

### **Historical Recognized Environmental Conditions**

The ASTM E 1527-13 Standard defines an HREC as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

HRECs were not identified in connection with the Proposed Project.

### **Summary**

In summary, we identified RECs during this Phase I.

The remainder of this report contains additional information regarding the Phase I, the resulting findings summarized above, and limitations affecting this report.

# 1. Introduction

This report presents the results of an ASTM Phase I (Phase I) conducted at the Pipeline Safety & Reliability Project in San Diego County, California (herein referred to as the “Proposed Project”). The approximately 47 mile Proposed Project is shown on the Project Locus, Figure 1. This Phase I was conducted to assist Insignia Environmental’s preparation of a Proponent’s Environmental Assessment (PEA) for the Proposed Project.

## 1.1 OBJECTIVE

The objective of a Phase I is to assess whether “[recognized environmental conditions](#)” (REC), [historical RECs \(HREC\)](#), and [controlled RECs \(CREC\)](#) are associated with the Proposed Project by evaluating site history, interviews, existing observable conditions, current site use, and current and former uses of adjoining properties as well as potential releases at surrounding properties that may impact the Proposed Project. Our conclusions are intended to help the user evaluate the “[business environmental risk](#)” associated with the Proposed Project.

RECs are defined in the ASTM E 1527-13 Standard as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or under conditions that pose a [material threat](#) of a future release to the environment.” The definitions of RECs, HRECs, and CRECs are included in the Glossary section of this report.

## 1.2 SCOPE OF SERVICES

This work was performed by (Haley & Aldrich) and this Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard and All [Appropriate Inquiries \(AAI\)](#) Rule<sup>2</sup> and in accordance with our proposal to Insignia Environmental dated 6 March 2014 (“Agreement”) as authorized on 3 July 2014. The Phase I limitations and Agreement are attached hereto as Appendix A.

As part of this Phase I, Haley & Aldrich conducted visual observations of site conditions and of abutting property use; reviewed federal, state, tribal, and local environmental database information, federal and state environmental files; and formulated conclusions regarding the potential presence and impact of RECs.

## 1.3 NON-SCOPE CONSIDERATIONS

The ASTM E 1527-13 Standard includes the following list of “additional issues” that are non-scope considerations outside of the scope of the ASTM Phase I practice: asbestos-containing materials, biological agents, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered

---

<sup>2</sup> American Society for Testing and Materials (ASTM) E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process as referenced in 40 Code of Federal Regulations (CFR) Part 312 (the All Appropriate Inquiries [AAI] Rule) (“ASTM E 1527-13 Standard”). Specified terms as are used in ASTM E 1527-13 are highlighted in blue in this report and defined in the Glossary at the end of the report text.

species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, and mold. These items were not included in this Phase I of the Proposed Project.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, our assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-13 Standard as “electrical or hydraulic equipment known or likely to contain PCBs...to the extent visually and or physically observed or identified from the interview or records review.”

#### **1.4 LIMITING CONDITIONS/DEVIATIONS**

With the exception of the deviations listed below, we did not make additions to or deviate from the ASTM E 1527-13 Standard to complete this Phase I.

- Site reconnaissance was not conducted for the portion of the Proposed Project that traverses the southern portion of MCAS Miramar. The site reconnaissance for the remainder of the Proposed Project was conducted from road/street right-of-ways; site reconnaissance was not conducted on private property.
- Interviews were not conducted.

#### **1.5 USER RESPONSIBILITIES**

The completion of this Phase I is only one component of the process required to satisfy the AAI Rule. In addition, the user must adhere to a set of user responsibilities as defined by the ASTM E 1527-13 Standard and the AAI Rule. User responsibilities are discussed in section 6.6 of this report. A user seeking protection from Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability as an innocent landowner, bona fide prospective purchaser, or contiguous property owner must complete all components of the AAI process in addition to meeting ongoing obligations. AAI components, CERCLA liability relief, and ongoing obligations are discussed in the AAI Rule and in Appendix XI of the ASTM E 1527-13 Standard.

## 2. Site Description

A description of the Proposed Project is detailed in the sections below. Refer to Figure 1 for a project locus.

### 2.1 SITE OWNERSHIP, LOCATION, AND VICINITY DESCRIPTION

Site Description		
Owner/Operators	Various Owners including: City of Escondido City of Poway City of San Diego County of San Diego Caltrans MCAS Miramar Private Owners	
Current Site Use	Existing road right-of-ways (ROWs), private land, MCAS Miramar	
Size	Approximately 47 miles	
Site County	San Diego	
Utilities	Water:	Utilities traversing the proposed project include San Diego Gas & Electric (SDG&E) electric and natural gas lines, water pipelines, sewer pipelines, fiber optic lines.
	Sewerage:	
	Electricity:	
	Gas/Oil/LPG:	

Site Vicinity Description	
General Area Description	Various including urban, rural, residential, commercial, and vacant land.
Adjoining Property Description	Adjoining properties include MCAS Miramar and various commercial/industrial/residential/private properties.

### 2.2 PHYSICAL SETTING

Subsurface explorations and/or hydrogeologic investigations were not performed for this Phase I. Subject site geology and hydrology were evaluated on the basis of readily available public information or references, and/or based upon our experience and understanding of subsurface conditions in the vicinity of the Proposed Project. It is unknown to what extent localized variations in groundwater depth and flow occur on the Proposed Project.

Physical Setting		Source
Site Elevation	Approximately El. 300 to 1000 feet above mean sea level	1
Depth to Groundwater	Varies. Groundwater encountered between 4 and 35 feet bgs at adjacent properties.	2
Surface Water Flow Direction	Surface water flow appears to flow in varied direction based on observed surface topography.	3
Regional Groundwater Flow Direction	Varies based on surface topography and nearby surface water bodies.	2
Nearest Surface Water Body	Lake Hodges, Escondido	1

**Sources:**

1. EDR
2. State Water Resources Control Board Geotracker Website
3. Site Reconnaissance

Environmentally Sensitive Areas		Source
Floodplain	Yes Old Highway 365 near 5 <sup>th</sup> Street, Rainbow San Luis Rey River south of State Highway 76 Old Highway 395 near Circle R Drive, Escondido Centre City Parkway near El Norte Parkway, Escondido Lake Hodges, Escondido Pomerado Road South of Oak Knoll Road, Poway	1
Mapped Wetlands	Yes Old Highway 395 near Circle R Drive, Escondido Lake Hodges, Escondido Pomerado Road South of Oak Knoll Road, Poway	1
Aquifer Protection Area/District	Not identified by EDR.	1
Watershed Protection District	Not identified by EDR.	1
Natural Resources Protection District	Not identified by EDR.	1

**Sources:**

1. Environmental Data Resources (EDR)

### **3. Previous Reports**

Previously prepared reports for the Proposed Project were not identified or provided as part of this assessment.

#### **4. Site History**

Haley & Aldrich will assess past usage of the Proposed Project and adjoining properties based on the review of selected aerial photographs and topographic maps based on the site reconnaissance. These historical sources have not been reviewed to date.

## 5. Environmental Records Review

### 5.1 ENVIRONMENTAL DATABASE RECORDS SEARCH

Haley & Aldrich used the electronic database service, Environmental Data Resources (EDR) to complete the environmental records review. The database search was used to identify properties that may be listed in the referenced agency records, located within the ASTM-specified approximate minimum search distances as shown in the table below. A description of each database searched is in Section 11.2 of this report. The complete environmental database report is provided in Appendix B. Pertinent information obtained from the database is summarized in Section 5.3 below.

Database Searched	Approximate Minimum Search Distance	Subject Site Listed?	Number of Sites within Search Distance <sup>1</sup>
1. NPL Sites	1 mile	No	0
2. Delisted NPL Sites	0.5 mile	No	0
3. CERCLIS Sites	0.5 mile	No	3
4. CERCLIS-NFRAP Sites	0.5 mile	No	2
5. Federal ERNS	Site only	No	Not Applicable
6. RCRA non-CORRACTS TSD Facilities	0.5 mile	No	0
7. RCRA CORRACTS TSD Facilities	1 mile	No	0
8. RCRA Generators	Site & Adjoining	No	75
9. Federal Institutional/Engineering Controls	Site Only	No	Not Applicable
10. State/Tribal Equivalent NPL Sites	1 mile	No	0
11. State/Tribal Equivalent CERCLIS Sites	0.5 mile	No	32
12. State/Tribal Registered Storage Tanks	Site & Adjoining	No	41
13. State/Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	4
14. State/Tribal Leaking Storage Tanks	0.5 mile	No	210
15. State/Tribal Institutional Controls/Engineering Controls	Site Only	No	Not Applicable
16. State/Tribal Voluntary Cleanup Sites	0.5 mile	No	1
17. State/Tribal Brownfield Sites	0.5 mile	No	39
18. Orphan Site List <sup>2</sup>	Site & Adjoining	No	0

**Notes:**

1. Some sites may be included on multiple databases.
2. Haley & Aldrich also searched the Orphan Site List provided in the database report for the Proposed Project and sites adjoining the Proposed Project. Orphan sites are those that, due to incorrect or incomplete addresses, could not be mapped.

## 5.2 ADDITIONAL ENVIRONMENTAL RECORDS OR FILE REVIEW

To supplement the environmental record search, we contacted the following state and local government agencies and searched applicable online databases. Relevant information obtained is included in the appropriate sections of the report and/or discussed in Section 5.3 below or in Table I. Adjacent properties were also included in requests for additional information if a significant incident or release was identified.

Agency	Request Sent or Files Searched		Files Exist and are Available for Review	Files Reviewed
	Subject Site	Adjoining Properties		
San Diego Regional Water Quality Control Board (SDRWQCB) <sup>1</sup>	No	Yes	Yes	Yes
San Diego County Department of Environmental Health (DEH) <sup>2</sup>	No	Yes	Yes	Yes
Department of Toxic Substance Control (DTDS) <sup>3</sup>	No	Yes	Yes	Yes

**Notes:**

1. The RWQCB maintains information regarding environmental concerns, and regarding soil and water contamination issues.
2. The DEH maintains information regarding hazardous substance storage and storage tank use.
3. The DTSC maintains information regarding hazardous substance storage and storage tank use, and regarding soil and water contamination issues.

## 5.3 DETAILED DESCRIPTION OF RELEVANT INFORMATION

### 5.3.1 Subject Site

The Proposed Project was not identified on the databases searched in the database report.

### 5.3.2 Nearby Sites

Numerous sites were listed in the database report within the applicable search radii or identified in regulatory records reviews. Due to their location with respect to the Proposed Project (on the opposite side of a hydrogeologic barrier, distance from the Proposed Project, location of the site relative to inferred groundwater flow, etc.), or their status (closed out release, etc.), many of the sites are not likely to adversely affect the Proposed Project and are not discussed herein. Due to the number of sites identified in the database report, only those sites adjacent to the Proposed Project and sites with a potential to have impacted the Proposed Project are discussed in the table below. The complete database report is included in Appendix B. Sites without reported releases of hazardous substances or petroleum products were not identified as RECs. Based on our review of available information, sites with reported releases of hazardous substances or petroleum products that do not appear to impact the

Proposed Project were not identified as RECs. Table I includes additional available information for sites identified as RECs.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
3135 Old Hwy 395, Fallbrook	CHMIRS	Release of sewage from faulty private pump station.	Not considered an REC.
Schaeffers Nursery Inc, 2319 State Hwy 395, Fallbrook	HIST UST	Release not reported.	Not considered an REC.
SCW Contracting Corp, 2525 N Old Hwy 395, Fallbrook	HAZNET, San Diego Co. HMMD	Release not reported.	Not considered an REC.
Naton Tractor Inc, 4935 2 <sup>nd</sup> St, Fallbrook	LUST, AST, San Diego Co. HMMD, San Diego Co. SAM	Case closed, unknown release.	REC, potential impact to Proposed Project (See Table I).

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Continental Cleaners, 505 W. Washington Ave, Escondido (west of Proposed Project)	Historical Dry Cleaners, HMMD	Releases not identified.	Not considered an REC.
Culligan Water, 507 Gannon, Escondido (west of Proposed Project)	LUST, CORTESE, UST, HMMD, SAM	Case closed, no impact to groundwater.	Not considered an REC.
Ryder Truck Rental, 520 Gannon Place, Escondido, (east of the Proposed Project)	SAM, HMMD, SWEEPS UST	Case closed, groundwater impacted but not beneath Proposed Project.	Not considered an REC.
Ace Storage Company, 238 Quince St, Escondido (east of Proposed Project)	HIST UST	Releases not identified.	Not considered an REC.
Jim L Daniels, 520 W. Grand Ave, Escondido (west of Proposed Project)	LUST, CORTESE, HMMD, SAM	Release of waste oil, motor oil, hydraulic oil, lubricating oil to groundwater. Case closed.	REC, potential impact to Proposed Project (See Table I).
USPS Escondido Station, 203 S. Orange St, Escondido (east of Proposed Project)	LUST, UST, HMMD, SAM	Release of gasoline to groundwater. Case closed.	REC, potential impact to Proposed Project (See Table I).
Thrifty Service Station #123, 434 W. 5 <sup>th</sup> Ave, Escondido (east of Proposed Project)	LUST, SWEEPS UST	Release of gasoline to groundwater. Adjacent to Proposed Project. MTBE documented in groundwater beneath Proposed Project.	REC, potential impact to Proposed Project (See Table I).
Han's US Petroleum & Service, 445 W. 5 <sup>th</sup> Ave, Escondido (east of Proposed Project)	LUST, UST, SAM	Release of gasoline to groundwater. Adjacent to Proposed Project. MTBE and free product documented in groundwater beneath Proposed Project.	REC, potential impact to Proposed Project (See Table I).

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Budget Gas 510 W. 5 <sup>th</sup> Ave, Escondido (west of Proposed Project)	LUST	Release of gasoline to groundwater. Adjacent to Proposed Project.	REC, potential impact to Proposed Project (See Table I).
Toyota of Escondido, 559 S. Pine St, Escondido (west of Proposed Project)	UST, HMMD, RCRA-SQG, FINDS, EMI	Releases not identified.	Not considered an REC.
North County Transit District, 755 Norlak, Escondido (west of Proposed Project)	LUST, RCRA-SQG, NPDES, CORTESE, SLIC, UST, AST, HMMD	PCE and TCE detected in groundwater from an offsite source.	REC, potential impact to Proposed Project (See Table I).
Mobil Service Station #18-231, 450 W. 9 <sup>th</sup> Ave, Escondido (east of Proposed Project)	RCRA-LQG, LUST, FINDS, CORTESE, UST,	Release of gasoline to groundwater. Adjacent to Proposed Project. Case closed, does not appear to have impacted groundwater beneath the Proposed Project.	REC, potential impact to Proposed Project (See Table I).
City Center Motors, 445 W. 9 <sup>th</sup> Ave, Escondido (east of Proposed Project)	LUST, HMMD, SAM	Release of gasoline did not impact groundwater. Adjacent to Proposed Project. Case closed.	Not considered an REC.
ARCO Service Station, 501 W. 9 <sup>th</sup> St, Escondido (west of Proposed Project)	LUST	Release of gasoline impacted soil only. Case closed.	Not considered an REC.
7-Eleven, 522 W. 9 <sup>th</sup> Ave, Escondido (west of Proposed Project)	LUST, SLIC, UST, HMMD, SAM	Release of gasoline impacted groundwater. Adjacent to the Proposed Project.	REC, potential impact to Proposed Project (See Table I).
G&S Gasoline and MiniMart, 501 W. 9 <sup>th</sup> Ave, Escondido (west of Proposed Project)	LUST, SLIC, UST, HMMD, SAM	Gasoline release impacted groundwater, adjacent to Proposed Project.	REC, potential impact to Proposed Project (See Table I).
Schniepp Property, 1417 S. Escondido Blvd, Escondido (east of Proposed Project)	LUST, HMMD	Release of gasoline to groundwater which has not been delineated off-site.	REC, potential impact to Proposed Project (See Table I).

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
CVS Pharmacy, 1655 S. Centre City Pky, Escondido (west of Proposed Project)	HMMMD, FINDS, HAZNET, RCRA-LQG	Releases not identified.	Not considered an REC.
Chevron 9-3920, 469 W. Felicita Ave, Escondido (south of Proposed Project)	LUST, CORTESE	Release of gasoline to groundwater. MTBE concentrations documented beneath Centre City Parkway. Groundwater encountered approximately between 16 and 20 feet bgs. Groundwater reportedly flows to the south.	REC, potential impact to Proposed Project (See Table I).
Gas and Save/Texaco/Walgreen, 460 W. Felicita Ave, Escondido, CA (north of Proposed Project)	LUST, UST, RCRA-SQG	Release of gasoline impacted groundwater. Adjacent to Proposed Project. Case closed. No other information available in EDR report or Geotracker.	REC, potential impact to Proposed Project (See Table I).
Mobil/Bright Now Dental, 501 W. Felicita Ave, Escondido (west of Proposed Project)	LUST	Release of gasoline impacted groundwater. Groundwater reportedly flows west/southwest away from the Proposed Project. Concentrations not present beneath Centre City Parkway.	Not considered an REC.
Express Tire, 1805 S. Centre City Pkwy, Escondido (west of Proposed Project)	FINDS, HMMMD, HAZNET	Releases not identified.	Not considered an REC.
Camp Escondido	Envirostor	Unexploded ordnance, munitions and explosives of concern.	REC, potential impact to Proposed Project (See Table I).
SD City Pump Station 76, 18695 Pomerado Rd, San Diego	HMMMD	Releases not identified.	Not considered an REC.
Saddle Club Estates LP, 18009 Pomerado Rd, San Diego CA	HAZNET	Releases not identified.	Not considered an REC.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Rancho Bernardo Dry Cleaners, 12540 Oaks North Dr, San Diego (east of Proposed Project)	Historical Cleaners	Releases not identified.	Not considered an REC.
Cleveland National Forest Service Center, 12500 Pomerado Rd, San Diego	SWEEPS UST	Releases not identified.	Not considered an REC.
Ken Taylor, 12506 Pomerado Ct, San Diego (east of Proposed Project)	HAZNET	Releases not identified.	Not considered an REC.
Texaco Service Station, 16916 Pomerado Rd, San Diego (west of Proposed Project)	RCRA-SQG, FINDS	Releases not identified.	Not considered an REC.
Shell Oil Products Co, 12472 Rancho Bernardo Rd, San Diego (west of Proposed Project)	HIST CORTESE, LUST, RCRA-SQG, FINDS, UST, HMMD, SAM	Release of gasoline impacted groundwater adjacent to Proposed Project.	REC, potential impact to Proposed Project (See Table I).
Pomerado Rd at Rancho Bernardo RD, San Diego	CHMIRS	Release of sewage from a private lateral.	Not considered an REC.
Rancho Bernardo Texaco, 12507 Rancho Bernardo Rd, San Diego (east of Proposed Project)	LUST, SLIC, CORTEZE, HAZNET, FINDS, UST, SAM, HMMD, RCRA-SQG	Release of gasoline impacted groundwater adjacent to Proposed Project.	REC, potential impact to Proposed Project (See Table I).
Albertson's, 12475 Rancho Bernardo Rd, San Diego (west of Proposed Project)	SWRCY, HMMD	Releases not identified.	Not considered an REC.

Property Name & Location	Database/ Record Identified	Description	Potential Impact to Subject Site
Verizon Wireless – Pomerado Hospital, 16275 Pomerado Rd, Poway	HMMMD	Releases not identified.	Not considered an REC.

Cleveland National Forest Service Center, 11355 Pomerado Rd, San Diego, CA 92145	CA San Diego Co. HMMMD	Release not reported.	Not considered an REC.
Carrol Canyon Demolition Area	FUDS, ENVIROSTOR	Release not reported.	Not considered an REC.

#### 5.4 VAPOR MIGRATION

The ASTM 1527-13 standard states that "for the purposes of this practice, "migrate" and "migration" refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface". Thus, this section specifies whether or not we perceive a risk of vapor migration to the Proposed Project.

To assess a vapor migration risk we conducted a detailed review and analysis of the site-specific environmental database report and/or other reasonably ascertainable records to assess whether:

1. Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
2. Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

Based on our records review, there are identified potential sources of vapor migration beneath the Proposed Project. However there are no structures/buildings associated with the Proposed Project that will be occupied. Therefore, the vapor migration is not considered an REC.

## 6. Site Reconnaissance and Key Personnel Interview(s)

A site visit to observe Proposed Project conditions of the portion of the proposed project that traverses MCAS Miramar was conducted by Mr. Mathew Raithel of Haley & Aldrich, on 10 October 2014. Access to the Proposed Project was provided by Ms. Shirley Innecken of Insignia Environmental. A site visit was conducted on the remainder of the Proposed Project on 7 April 2015.

Haley & Aldrich observed the exterior portions of the Proposed Project, including the property boundaries, and observed adjoining property conditions from the public thoroughfares. No weather-related conditions or other conditions that would limit our ability to observe the Proposed Project or adjoining properties occurred during our site visit. A site reconnaissance was not conducted on private property or at the southern portion of MCAS Miramar since this area is an active shooting range.

Interviews with the [key site manager](#) or property tenants/owners were not performed in conjunction with the site visit. Per the ASTM Standard, past owners, operators, and occupants of the Proposed Project who are likely to have material information regarding the potential for contamination at the subject property shall be contacted to the extent that they can be identified and that the information likely to be obtained is not duplicative of information already obtained from other sources. Haley & Aldrich was not provided with contact information in order to interview past owners and/or operators at the Proposed Project. Based upon data collected from other sources, this potential data gap is not expected to adversely impact the results of this assessment.

The findings of the site visit are discussed below. Site photographs are included in Appendix C.

ASTM E 1527-13 Standard Section 10.8 requires that, prior to the site visit, the current Proposed Project owner or key site manager and user, if different from the current owner or key site manager, be asked if there are any helpful documents that can be made available for review. Due to the nature of this linear project with multiple public and private property owners and since numerous public documents were available on the State of California Geotracker and Envirostor websites, documents were not requested.

### 6.1 CURRENT USE OF THE PROPERTY

The majority of the Proposed Project is either vacant land or public roadways. Portions of the Proposed Project traverse both residential and commercial properties. The Proposed Project traverses the following roadways:

- Old Highway 395;
- Rainbow Valley Boulevard;
- Rainbow Hills Road;
- Centre City Parkway;
- Felicita Avenue;
- East 17<sup>th</sup> Avenue;
- Encino Drive;
- Bear Valley Parkway;

- Highland Valley Road;
- Pomerado Road; and
- Avenue of Nations.

The Proposed Project crosses Interstate-15 between Mile Posts 11 and 12. The Proposed project crosses Lake Hodges near Mile Post 30.

The portion of the Proposed Project that traverses MCAS Miramar is a San Diego County Water Authority unpaved aqueduct access.

## 6.2 GENERAL DESCRIPTION OF STRUCTURES

Buildings were not observed on the MCAS Miramar portion of the Proposed Project. Structures abutting the roadways include both residential and commercial buildings.

## 6.3 USE, STORAGE, AND DISPOSAL OF PETROLEUM PRODUCTS AND HAZARDOUS MATERIALS

The use, storage and/or disposal of petroleum products or hazardous materials was not observed or reported at the roadway portions of the Proposed Project or the MCAS Miramar portion of the Proposed Project.

## 6.4 OTHER SUBJECT SITE OBSERVATIONS

The table below summarizes items that were observed and/or reported at the Proposed Project during the site visit other than those items related to use, storage, and disposal of petroleum or hazardous materials (described in Section 6.3 above). If items were observed or reported, they are further described either in the table or below.

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Potable Water Supply	No	An aqueduct operated by the San Diego County Water Authority traverses the portion of the proposed project that traverses MCAS Miramar.
Nearest Drinking Water Source	No	
Sewage Disposal System	No	
Septic System	No	
Unidentified Storage Containers	No	
Wastewater Discharge	No	
Stormwater Discharge	No	
Odors	No	
PCBs Associated with Electrical or Hydraulic Equipment	No	

Description	Observed or Reported at Time of Site Visit	Observations/Comments
Elevators (Traction or Hydraulic)	No	
Vehicle Maintenance Lifts	No	
Emergency Generators	No	
Sprinkler System Pumps	No	
Heating System	No	
Cooling System	No	
Stains or Corrosion on Floors, Walls, or Ceilings	No	
Floor Drains	No	
Sumps	No	
Catch Basins	Yes	Catch basins were observed on the roadways.
Pits, Ponds, Lagoons, and Pools of Liquid	No	
Stained Soil or Pavement	No	
Stressed Vegetation	No	
Solid Waste and Evidence of Waste Filling	No	
Dry Wells	No	
Monitoring Wells	No	
Water Supply Wells	No	
Irrigation Wells	No	
Injection Wells	No	
Abandoned Wells	No	

## 6.5 ADJOINING PROPERTY OBSERVATIONS

Properties adjoining the Proposed Project include vacant land, park land, Lake Hodges, residential properties, school properties, and commercial properties. In general, commercial properties include nurseries, restaurants, retail stores, gasoline service stations, physician's offices, etc.

The portion of the Proposed Project that traverses MCAS Miramar is generally vacant undeveloped land. A solar panel farm is located adjacent to northeast portion of the Proposed Project that traverses MCAS Miramar.

## 6.6 USER RESPONSIBILITIES

The AAI Rule requires that the User of the report consider the following:

- Whether the user has specialized knowledge about previous ownership or uses of the Proposed Project that may be material to identifying RECs;
- whether the user has determined that the Proposed Project's Title contains environmental liens or other information related to the environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations (AULs), as defined by ASTM;
- whether the user is aware of commonly known or reasonably ascertainable information about the Proposed Project including whether or not the presence of contamination is likely on the Proposed Project and to what degree it can be detected; and
- whether the user has prior knowledge that the price of the Proposed Project has been reduced for environmentally related reasons.

While such information is not required to be provided by the environmental professional(s), the information can assist the environmental professional in identifying recognized environmental conditions. The "All Appropriate Inquiries" Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an LLP to CERCLA liability.

## 7. Findings and Opinions

### 7.1 DATA GAPS

Our ability to identify and evaluate RECs at the Proposed Project is conditioned upon data gaps identified as part of this Phase I.

We identified the following significant data gaps in association with this Phase I. The sources of information that were consulted to address the data gap and their significance relative to our ability to identify RECs are described below.

- Site reconnaissance was not conducted for the portion of the Proposed Project that traverses the southern portion of MCAS Miramar. The site reconnaissance for the remainder of the Proposed Project was conducted from road/street right-of-ways; site reconnaissance was not conducted on private property.
- Interviews were not conducted.

### 7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an REC in part as “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property.”

Our opinion regarding an REC's potential impact on the Proposed Project is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, our experience evaluating similar sites, and our understanding of the client's intended use for the Proposed Project.

The following RECs listed below were identified in connection with the Proposed Project.

**REC #1:** Contaminated soil/groundwater from adjacent and nearby sites

Portions of the Proposed Project are located in an urban industrial area of San Diego County. Numerous releases of hazardous substances or petroleum products to soil and groundwater have been documented from adjacent and nearby sites. There is a potential that soil and/or groundwater beneath the Proposed Project has been impacted by these releases. Groundwater has been encountered between approximately 4 and 35 feet below ground surface at these sites. The pipeline will exceed the minimum depth of cover required by the U.S. Department of Transportation, which is typically 36 inches. Following is a list of adjacent and nearby sites that have documented soil/groundwater impacts and have the potential to impact soil/groundwater beneath the Proposed Project. Table I includes additional available information for each of these locations.

- Naton Tractor Inc., 4935 2nd St, Fallbrook.
- Rainbow Oaks, 4815 E 5th St, Fallbrook.
- Stewart Canyon Road and Old Highway 395, Fallbrook.
- Mobil Station 18-034, 4730 Hwy 76, Fallbrook.
- Champagne Texaco, 8808 Lawrence Welk Dr, Escondido.
- Vacant Lot, 26845 Mountain Meadow Rd, Escondido.
- Connecticut General Life Insurance/ McCleaners, 306 W. El Norte Pkwy, Escondido.
- E-Z Auto Repair, 1280 Escondido Blvd, Escondido.
- Shell Service Station, 340 W. Mission Ave, Escondido.
- Mobil Station 18-100, 502 W. Mission Blvd, Escondido.
- Golden State Gasoline, 225 W. Washington Ave, Escondido.
- Hoover Dry Cleaners, 370 W. Washington Ave, Escondido.
- Civic Center Plaza Mr. Terry 1-Hr Mart, 431 N. Escondido Blvd, Escondido.
- Dunn-Edwards Corp/7 Day Market, 503-506 W. Washington Ave, Escondido.
- North County Transit District, 755 Norlak, Escondido.
- Jim L Daniels, 520 W. Grand Ave, Escondido.
- USPS Escondido Station, 203 S. Orange St, Escondido.
- Thrifty Service Station #123, 434 W. 5th Ave, Escondido.
- Han's US Petroleum & Service, 445 W. 5th Ave, Escondido.
- Budget Gas, 510 W. 5th Ave, Escondido.
- Mobil Service Station #18-231, 450 W. 9th Ave, Escondido.
- 7-Eleven, 522 W. 9th Ave, Escondido.
- G&S Gasoline and MiniMart, 501 W. 9th Ave, Escondido.
- Schniepp Property, 1417 S. Escondido Blvd, Escondido.
- Chevron 9-3920, 469 W. Felicita Ave, Escondido.
- Gas and Save, 460 W. Felicita Ave, Escondido, CA.
- Camp Escondido.
- Shell Oil Products Co, 12472 Rancho Bernardo Rd, San Diego.
- Rancho Bernardo Texaco, 12507 Rancho Bernardo Rd, San Diego.
- 7-Eleven Food Store #13624, 13626 Pomerado Rd, Poway.
- Poway Econo Lube N Tube, 13506 Pomerado Rd, Poway.
- William P Racicot DDS, 13029 Pomerado Rd, Poway.
- Union Oil Service Station #488, 13012 Pomerado Rd, Poway.

- Chevron 94955, 12410 Poway Rd, Poway.
- Shell Service Station/Callaway Oil Inc, 12365 Poway Rd, Poway.
- Circle K, 12906 Pomerado Rd, Poway.
- Sycamore Canyon Facility, Raytheon Systems Co., 11393 Pomerado Rd, San Diego.

### 7.3 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines a CREC as a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

CRECs were not identified in connection with the Proposed Project.

### 7.4 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

The ASTM E 1527-13 Standard defines an HREC as an environmental condition “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

HRECs were not identified in connection with the Proposed Project.

### 7.5 DE MINIMIS CONDITIONS

The ASTM E 1527-13 Standard defines *de minimis* conditions as those conditions which “do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” The ASTM E 1527-13 Standard notes that “conditions determined to be *de minimis* are not recognized environmental conditions.”

*De minimis* conditions were not identified in connection with the Proposed Project.

## 8. Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of the ASTM Practice E 1527 of the Pipeline Safety & Reliability Project in San Diego County, California. Any exceptions to or deletions from this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- REC #1: Contaminated soil/groundwater from adjacent and nearby sites.

Refer to Section 7.2 above for our opinion regarding those RECs listed above.

## 9. Environmental Professional Certification

The undersigned declare the following:

We declare that, to the best of our professional knowledge and belief, we meet the definition of [Environmental Professional](#) as defined in 40 CFR Part 312, §312.10.

We have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Proposed Project and “develop opinions and conclusions regarding conditions indicative of releases or threatened releases.” We have developed and performed the “all appropriate inquiries” (AAI) in conformance with the standards and practices set forth in 40 CFR Part 312.

Mathew T. Raithel  
Senior Scientist

Mehdi Miremadi  
Senior Vice President

## 10. Credentials

This Phase I report was prepared by Mathew T. Raithel, under the direct supervision of Mehdi Miremadi, who served as the Environmental Professional(s) for this project. Qualification information for the project personnel is provided below.

**MATHEW T. RAITHEL**  
**Senior Scientist**

This report was prepared by Mathew Raithel, who served as the project scientist for this project. Mr. Raithel has over 16 years of experience managing and conducting Phase I and Phase II environmental site assessments and investigations throughout Southern California and Arizona, including commercial and industrial facilities and linear projects such as electrical transmission lines and natural gas pipelines.

**Mehdi Miremadi**  
**Senior Vice President**

Mr. Miremadi has over 28 years of experience in investigation, remediation, and closure of contaminated sites with particular focus on redevelopment of large contaminated industrial properties. Mr. Miremadi is currently the program manager for redevelopment of over 10 large industrial properties in Southern California involving soil excavation, facility decommissioning, demolition, and construction oversight. He specializes in remedial investigations/feasibility studies, evaluation of remedial alternatives, hydrogeologic investigations, health risk assessment, conceptual and detail design of soil and groundwater remediation systems, contaminant fate and transport assessment and modeling, regulatory compliance, and water resources studies, remediation of sites contaminated with chlorinated hydrocarbons and metals. Mr. Miremadi has also been retained as an expert in the area of degradation of chlorinated hydrocarbons and their fate and transport in the subsurface.

## 11. Glossary and Other Descriptions

### 11.1 GLOSSARY

**All Appropriate Inquiry (AAI)** — that inquiry constituting “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in CERCLA, 42 U.S.C §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of threshold criteria for satisfying the LLPs to CERCLA liability (42 U.S.C §9601(35)(A) & (B), §9607(b)(3), §9607(q); and §9607(r)), assuming compliance with other elements of the defense.

**Business Environmental Risk** — a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.

**Controlled Recognized Environmental Condition (CREC)** — a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

**Data Gap** — a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

**De Minimis Conditions** — conditions which do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

**Environmental Professional** — a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

**Historical Recognized Environmental Condition (HREC)** — a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

**Key Site Manager** — the person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property.

**Material Threat** —a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

**Orphan Site** — (not ASTM E 1527-13 definition) — sites that could not be mapped due to poor or inadequate address information.

**Recognized Environmental Condition (REC)** — the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.

## 11.2 DESCRIPTIONS OF DATABASES SEARCHED

Numerous regulatory databases were searched during this Phase I. Each database reviewed is described in the database report presented in Appendix B. Those databases required by the ASTM E 1527-13 Standard are identified below.

1. **NPL Sites:** The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for cleanup by the U.S. Environmental Protection Agency (USEPA).
2. **Delisted NPL Sites:** The Delisted NPL is a list of former NPL sites formerly considered the highest priority for cleanup by the USEPA that met the criteria of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) for deletion from the NPL because a no further response was appropriate.
3. **CERCLIS Sites:** The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess whether they should be considered for inclusion on the NPL.
4. **CERCLIS-NFRAP Sites:** CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.
5. **Federal ERNS:** The Federal Emergency Response Notification System (ERNS) list tracks information on reported releases of oil and hazardous materials.
6. **FINDS:** This Facility Registry System points to other sources such as permit compliance, emissions tracking and, enforcement docket cases which are listed for the site.

7. **CONSENT:** Superfund (CERCLA) Consent Decrees. This database provides major legal settlements that establish responsibilities and standards for clean-up at NPL facilities.
8. **HAZNET:** This is a list of hazardous waste manifests kept by the California Environmental Protection Agency (Cal EPA).
9. **US Brownfields:** This database includes brownfields properties that are targeted by the USEPA's Targeted Brownfields Assessment program.
10. **RCRA non-CORRACTS TSD facilities:** The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.
11. **RCRA CORRACTS TSD facilities:** The RCRA CORRACTS TSD Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.
12. **RCRA Generators:** The RCRA Generator list is maintained by the USEPA to track facilities that generate hazardous waste.
13. **RCRA Non-Generators:** The RCRA Non-Generator list is maintained by the USEPA to track facilities that currently do not generate hazardous waste.
14. **Federal Institutional Controls/Engineering Controls:** The Federal Institutional Control list and Engineering Control list are maintained by the USEPA. Some Institutional Control and Engineering Control information may not be made publicly available and therefore will not be included on this registry.
15. **State and Tribal Equivalent NPL/CERCLIS Sites:** The ASTM E 1527-05 Standard requires searching "State and Tribal Equivalent CERCLIS Sites." In California, the equivalent CERCLIS is the Cal-Sites database and the equivalent NPL is the Response database, both of which are maintained by the Department of Toxic Substance Control (DTSC).
16. **State and Tribal Registered Storage Tanks:** In California, local regulatory agencies (e.g., county health departments and fire departments) and the State Water Resources Control Board (SWRCB) maintain lists of aboveground and underground storage tanks registered with those agencies (e.g., county health departments). For tribal property, the USEPA Region 9 maintains a list of underground storage tanks on Indian land.
17. **State and Tribal Landfills and Solid Waste Disposal Sites:** In California, the SWRCB in coordination with the RWQCBs and the Integrated Waste Management Board (IWMB) maintain lists of regulated waste disposal sites.
18. **State and Tribal Leaking Storage Tanks:** In California, the SWRCB in coordination with the RWQCBs maintains lists of Leaking Storage Tanks (LUST/LAST). The LUST/LAST lists are a listing of release sites that have an underground or aboveground storage tank listed as the source. For tribal property, the USEPA Region 9 maintains a list of leaking USTs on Indian land.

19. **State and Tribal Institutional Controls/Engineering Controls:** The USEPA maintains lists of sites with Institutional controls or Engineering controls in place. In addition, DTSC maintains a list of environmental deed restrictions.
20. **State and Tribal Voluntary Cleanup Sites:** In California, the DTSC, RWQCB, and local regulatory agencies (e.g., county health departments) maintain lists of Voluntary Cleanup sites.
21. **State and Tribal Brownfield Sites:** In California, the DTSC maintains a list of Brownfield sites which includes any property where a redevelopment or re-use may be compromised by the presence or presumed presence of hazardous materials or petroleum.
22. **Other State Hazardous Waste Sites and Releases:** In California, the Cal/EPA including DTSC, and the SWRCB including RWQCB have created and/or maintain databases that identify hazardous waste sites and locations of hazardous substance releases/spills. These databases include:
  - **SLIC** – The Spills, Leaks, Investigation and Cleanup (SLIC) database maintained by the RWQCB identifies sites that are being investigated and/or remediated for known releases other than those associated with leaking USTs.
  - **CORTESE** – The CORTESE Hazardous Waste and Substances Sites list includes a list of public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release, and all solid waste disposal facilities from which there is known migration. The sites on this list were those included on the SWRCB Leaking Underground Storage Tank (LUST) list, the IWMB Solid Waste Information System (SWF/LF), also referred to as (SWIS), and the DTSC Cal-Sites. The CORTESE listing is no longer updated.
  - **ENVIROSTOR** – The DTSC database identifies sites that have known contamination or for which there may be reason to investigate further. It consists of NPL, state response, voluntary cleanup and school sites.
  - **HIST UST** – Hazardous Substance Storage Container database is a historical listing of UST sites.
  - **LUST** – Geotracker’s Leaking Underground Fuel Tank Report. LUST records contain an inventory of reported leaking underground storage tank incidents. This list was last updated on 09/06/2011.
  - **NPDES:** A list of National Pollutant Discharge Elimination System permits, including storm water. The source is the State Water Resources Control Board.
  - **MANIFEST:** This database lists and tracks hazardous waste from the generator through transporters to a TSD facility.
  - **SWEEPS UST:** This underground storage tank listing was maintained only in the 1980s.

**APPENDIX A**

**Limitations**

**Haley & Aldrich Proposal dated 6 March 2014**

## APPENDIX A

### HALEY & ALDRICH, INC. LIMITATIONS

Environmental site assessment ("ESA") reports prepared by Haley & Aldrich are for the sole and exclusive use of its Client. Haley & Aldrich represents that the ESA was prepared in accordance with the ASTM International Standard E1527-13 entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" ("ASTM E 1527-13"). The findings, opinions, conclusions and information contained in the ASTM E 1527-13 ESA are limited to, and solely based upon, information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed.

All users of this ASTM E 1527-13 ESA are bound to the terms and conditions and limitations contained in the accompanying Proposal, Terms & Conditions, and Limitations for this ASTM E 1527-13 ESA. The findings, opinions, conclusions and information contained in this report are based solely on the Scope of Services provided pursuant to the Proposal and its attachments and the information reasonably ascertainable by Haley & Aldrich at the time the ASTM E 1527-13 ESA was completed. Haley & Aldrich has not performed any additional observations, investigations, studies, or other testing not specified in the Scope of Services. Haley & Aldrich shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Scope of Services.

This ASTM E 1527-13 ESA is prepared for the exclusive use of Haley & Aldrich's client in connection with the subject property for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property. There are no intended beneficiaries other than Haley & Aldrich's client. Haley & Aldrich shall owe no duty whatsoever to any other person or entity by issuing the ASTM E 1527-13 ESA. Use of this ASTM E 1527-13 ESA by any person or entity, including by Haley & Aldrich's client, for a purpose other than for the purpose of assessing the potential or existing environmental contamination liabilities associated with the subject property is expressly prohibited unless such person or entity obtains written authorization from Haley & Aldrich indicating that the ASTM E 1527-13 ESA is adequate for such other use. Use of this ASTM E 1527-13 ESA by any person or entity for such other purpose without written authorization by Haley & Aldrich shall be at such person's or entity's sole risk and shall be without legal exposure or liability to Haley & Aldrich.

Haley & Aldrich may authorize third-party reliance on the ASTM E 1527-13 ESA by providing reliance letters to third party(ies) provided that the third party(ies) agree: (1) to use the ASTM E 1527-13 ESA only for the purpose of assessing the potential or existing environmental contamination liabilities associated with real property; (2) to be bound by the terms and conditions and limitations contained in the ASTM E 1527-13 ESA and the Proposal and its attachments, Terms & Conditions, and Limitations; (3) to accept the form and substance of Haley & Aldrich's reliance letter; and (4) to deliver to Haley & Aldrich a signed copy of a reliance letter by an authorized representative of the relying party, within thirty (30) days after said reliance letter is provided to the relying party, signifying the relying party's acceptance of the aforementioned conditions. Upon Haley & Aldrich's receipt of the signed reliance letter by the relying party(ies), the relying party(ies) will be authorized to rely on Haley & Aldrich's ASTM E 1527-13 ESA for the limited purpose of identifying potential or existing environmental contamination liabilities associated with the subject property. The relying party(ies) agrees to bind each of its respective successors and assigns to the aforementioned terms and conditions.

This ASTM E 1527-13 ESA reflects site conditions observed and described by records available to Haley & Aldrich as of the date of ASTM E 1527-13 ESA preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the ASTM E 1527-13 ESA. Accordingly, Haley & Aldrich's client and any other party to whom the ASTM E 1527-13 ESA is provided recognize and agree that Haley & Aldrich shall bear no liability for deviations from observed conditions or available records after the time of ASTM E 1527-13 ESA preparation. Haley & Aldrich makes no express or implied representation that the information contained in the ASTM E 1527-13 ESA has continued viability after 180 days of the ASTM E 1527-13 ESA's completion date, and any use or reliance on the ASTM E 1527-13 ESA after 180 days of the ASTM E 1527-13 ESA's completion date by Haley & Aldrich's client or any other authorized person or entity will be at that party's sole risk and without liability to Haley & Aldrich.

Notwithstanding anything contained herein, Haley & Aldrich shall not be liable for any claim or damage arising from environmental contamination liabilities that occurred on the subject property after the effective date of the ASTM E 1527-13 ESA. Likewise, Haley & Aldrich shall not be liable for any existing or future property owner's failure to satisfy any continuing obligation for CERCLA liability protection or under the Federal Environmental Protection Agency's All Appropriate Inquiries rule.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 3 CERCLIS sites within the searched area.

<b><i>CAMP ELLIOT</i></b>	<b><i>CAMP ELLIOT</i></b>	<b><i>167-22</i></b>

## EXECUTIVE SUMMARY

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within the searched area.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 10 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 67 RCRA-SQG sites within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 9 RCRA NonGen / NLR sites within the searched area.

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 133 CA SWEEPS UST sites within the searched area.

## EXECUTIVE SUMMARY

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, and dated 06/05/2014 has revealed that there is 1 CA RESPONSE site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
<b>CHATHAM BROTHERS BARREL YARD</b>	<b>2257 BERNARDO AVE</b>	<b>97-14</b>

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2012 has revealed that there are 102 CA HAZNET sites within the searched area.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 06/05/2014 has revealed that there are 32 CA ENVIROSTOR sites within the searched area.

### EDR PROPRIETARY RECORDS

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within the searched area.

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 103 EDR

## EXECUTIVE SUMMARY

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there are 42 CA RGA LUST sites within the searched area.

Hazardous Waste Summary:

Waste code:              213  
Waste name:               213

Waste code:              513  
Waste name:               513

Waste code:              D001  
Waste name:              IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:              D018  
Waste name:               BENZENE

**FINDS:**

Registry ID: 110002680607

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

building. Soil sampling analytical results indicated a release of gasoline to the soil. Additional investigations by different consultants included drilling two soil borings and installing five groundwater monitoring wells and five temporary wells. Results of the site assessment activities indicated there was also a release of petroleum hydrocarbons to groundwater. The site Geology was observed to be sandy silt and poorly graded sands from the surface to depths ranging from 12 to 19 feet underlain by granitic bedrock to the explored depth of 19 feet below ground surface (bgs). Soil sample results indicate that petroleum hydrocarbon impacted soil is limited to the immediate proximity of the UST system between 8 to 20 feet in depth. The consultant has estimated there is approximately 500 cubic yards of impacted soil remaining with very low concentrations of benzene and MTBE. The depth of groundwater at the site ranges from 7.72 to 9.63 feet bgs and flows easterly. Four quarters of quarterly groundwater monitoring was conducted at the site during 2008. The previous monitoring event before 2008 was back in 2003. The contaminants of concern in groundwater are dissolved benzene and MTBE, which appears limited to the immediate down gradient direction. The down gradient wells MW-2 and MW-3 have shown decreasing concentration trends during the quarterly events. A Corrective Action Plan (CAP) was prepared which recommended remediation by natural attenuation (RNA) as the most cost effective remedial strategy. This was due to the low concentrations of benzene remaining. MTBE concentrations in groundwater had declined to below the cleanup goal prior to preparation of the CAP. A sensitive receptor survey was included in the CAP. Four nearby irrigation supply wells and Rainbow Creek were found within the 2,500 foot radius from the site. Rainbow creek is down gradient approximately 200 feet from the source. However exposure is considered highly unlikely due plume stability and the decreasing trend of contaminants. The consultant recommended an additional year of groundwater monitoring as the benzene was expected to reach the cleanup goal of 1 ppb in approximately 2.1 years. The CAP was approved on 9/17/2009 and benzene concentrations have been fluctuating above and below the 1 ppb goal for the past year of monitoring in 2009. Therefore the monitoring has proved that natural attenuation is at work and that benzene will reach the 1 ppb goal shortly. DEH recommends no further action as a low risk groundwater tank site.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LOC Case Number:	H20432-003
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	The site is located at 1005 East Mission Road on the southeast corner of the intersection of East Mission Road and Santa Margarita Drive in Fallbrook, San Diego County, California. An active single-story Circle K Store building and associated asphalt-paved parking and driveway areas currently occupy the site. The site has not been used for gasoline storage or dispensing since the entire known underground storage tank (UST) system was excavated and removed. In March 1993, an unleaded gasoline product line failed a precision test. Three soil samples were taken from the area under the gasoline product line by Advance Petroleum (contractor); results ranged from 113 to 2,430 parts per million (ppm) total petroleum hydrocarbons (TPH) at 2.5 to 3.5 feet below ground surface (bgs). All visibly contaminated soil was reportedly excavated, stockpiled on-site, and covered with visqueen. However, no confirmation samples were collected and no site plan was provided showing sampling locations. Reportedly, the unleaded product line reportedly was exposed and a leak identified at a union. The entire line was replaced with single-wall fiberglass product lines, new unions were installed, and the system was retested. The UST system reportedly passed the precision integrity retesting. In May 1993, two soil samples were collected and analyzed from 5.5 cubic yards of stockpiled soils by Groundwater Technology, Inc.; analytical results for both samples were below laboratory instrument detection limits. The soils were transported and disposed of at the Sycamore Class III landfill in Santee, California, by Fred North Construction (contractor). In June 1993, a "No Further Action" letter, pertaining to the failed precision test, was received from the SAM. Circle K assumed this meant the site was "closed". In November 1993, SAM issued an Official Notice letter to Circle K which stated that the UST Unauthorized Release report for the site was past due. SECOR International Inc. investigated the status of the case and was informed by SAM that the failed precision test case was "closed", but the impacted soils investigation was considered still active by SAM. The site was assigned Unauthorized Release #H2O432-003. On January 30, 1995, SECOR personnel hand-augered four soil borings (B-1 through B-4) to a maximum depth of approximately 12 feet bgs at the location of a previously-buried gasoline pipeline excavation, as indicated by Advance Petroleum. Total petroleum hydrocarbons as gasoline (TPHg) concentrations were detected in B-1 ranging from 0.1 milligrams per kilograms (mg/kg) at 6 feet bgs to 350 mg/kg at 12 feet bgs. No benzene was detected in these samples. TPHg was not detected in soil samples collected from boreholes B-2 through B-4. In

**CIRCLE K STORE #777 (Continued)**

**1000174069**

May 1995, the SAM issued a letter to Circle K requiring additional assessment of impacted soils and groundwater beneath the subject site. On June 19 through June 21, 1995, a SECOR geologist supervised the drilling of ten soil borings (GP-1 through GP-10). Soil borings were hydraulically driven to a maximum depth of approximately 9.5 feet bgs. Very dense decomposed granite (DG) prevented the direct-push drill rig from drilling deeper than 9.5 feet bgs. Following the direct-push drilling activities, a CME- 75 truck-mounted hollow-stem auger drill rig was used to set four groundwater monitoring wells to a maximum of 15 feet bgs. MW-1, MW-2, MW-3, and MW-4 were constructed in soil boring locations GP-9, GP-4, GP-7, and GP-6, respectively. A total of 36 soil samples and eight groundwater grab-type samples were collected during this phase of site assessment. TPHg concentrations in soil ranged from non-detect (ND) to 6,514 mg/kg, while benzene concentrations in soil ranged from ND to 109.5 mg/kg. TPHg concentrations in groundwater ranged from ND to 418,228 micrograms per liter (ug/l), while benzene concentrations in groundwater ranged from 56.5 to 25,116 ug/l. On July 29, 1995, MW-1 through MW-4 were purged and sampled.

**LUST REG 9:**

Region: 9  
Status: Preliminary site assessment underway  
Case Number: 9UT2488  
Local Case: H20432-003  
Substance: Unleaded Gasoline  
Qty Leaked: 0  
Abate Method: Not reported  
Local Agency: San Diego  
How Found: Tank Test  
How Stopped: Not reported  
Source: Unknown  
Cause: Unknown  
Lead Agency: Local Agency  
Case Type: Aquifer affected  
Date Found: 05/03/1993  
Date Stopped: 03/09/1993  
Confirm Date: 05/03/1993  
Submit Workplan: 5/3/93  
Prelim Assess: 05/17/1993  
Desc Pollution: Not reported  
Remed Plan: / /  
Remed Action: Not reported  
Began Monitor: Not reported  
Release Date: 05/25/1993  
Enforce Date: Not reported  
Closed Date: Not reported

Case Type:	Cleanup Program Site
Case Worker:	EB
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Not reported
Site History:	The case was opened because Palomar College proposed building a road in a former agricultural area where pesticide residues may have been present in the soil. A former VAP case was opened for the entire property; however, the responsible party did not complete the investigation and withdrew from the VAP program. The College sought DEH oversight for the investigation of pesticide residues in soil in the proposed Horse Creek Road right-of-way. Sixteen soil samples were collected from the former agricultural areas in the right-of way and analyzed for organochlorine pesticides. The College collected an additional three samples from an offsite area to be used as a borrow area. Chlordane was detected in two samples from the right-of-way at concentrations below the California Human Health Screening Levels (CHHSLs) for residential soils. Other organochlorine pesticides were not detected in any of the samples. The consultant requests no further action for the right-of-way based on the low level of pesticides detected and DEH concurs with this conclusion. DEH stipulates that additional sampling should be conducted before the

Case Worker:	EM
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT4055
LOC Case Number:	H20409-004
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	3/00 During a product pipeline integrity test, two leaks were discovered, one at the flexible line "boot" connection to the middle (#5) dispenser and the other near the western dispenser island. The product pipelines were repaired and soil samples were collected and analyzed. 8/02 Station upgrade activities were performed including the removal of four gasoline USTs (one 6,000-, two 10,000- and one 12,000-gallon) and all product piping. Three new 15,000-gallon double-walled fiberglass USTs were installed. Approximately 556 tons of soil was excavated to a depth of approximately 17 feet bgs. 3/03 Installed three onsite groundwater monitoring wells (MW-1, MW-2 and MW-3) to depths of approximately 24, 29, and 24 feet bgs, respectively. No soil samples were collected due to the presence of granitic rock. 6/03 The center gasoline UST was found to have a breach in the inner tank wall and was replaced with a new UST. In addition, the northern gasoline UST was found to have a breach in the inner tank wall. The northern UST was repaired and replaced back into the UST cavity. No fuel was known to have been released from either UST. 10/04 Installed four onsite groundwater monitoring wells (MW-4, MW-5, MW-6, and MW-7) to depths of approximately 35, 26, 36, and 15 feet bgs, respectfully. No soil samples were collected below two feet due to the presence of granitic rock. Analytical data of surface soil samples were reportedly below laboratory detection limits for MTBE, BTEX, and TPH-g. 4/07 Environmental consulting and management activities transferred from TRC to ETIC Engineering Inc. 1/08

POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

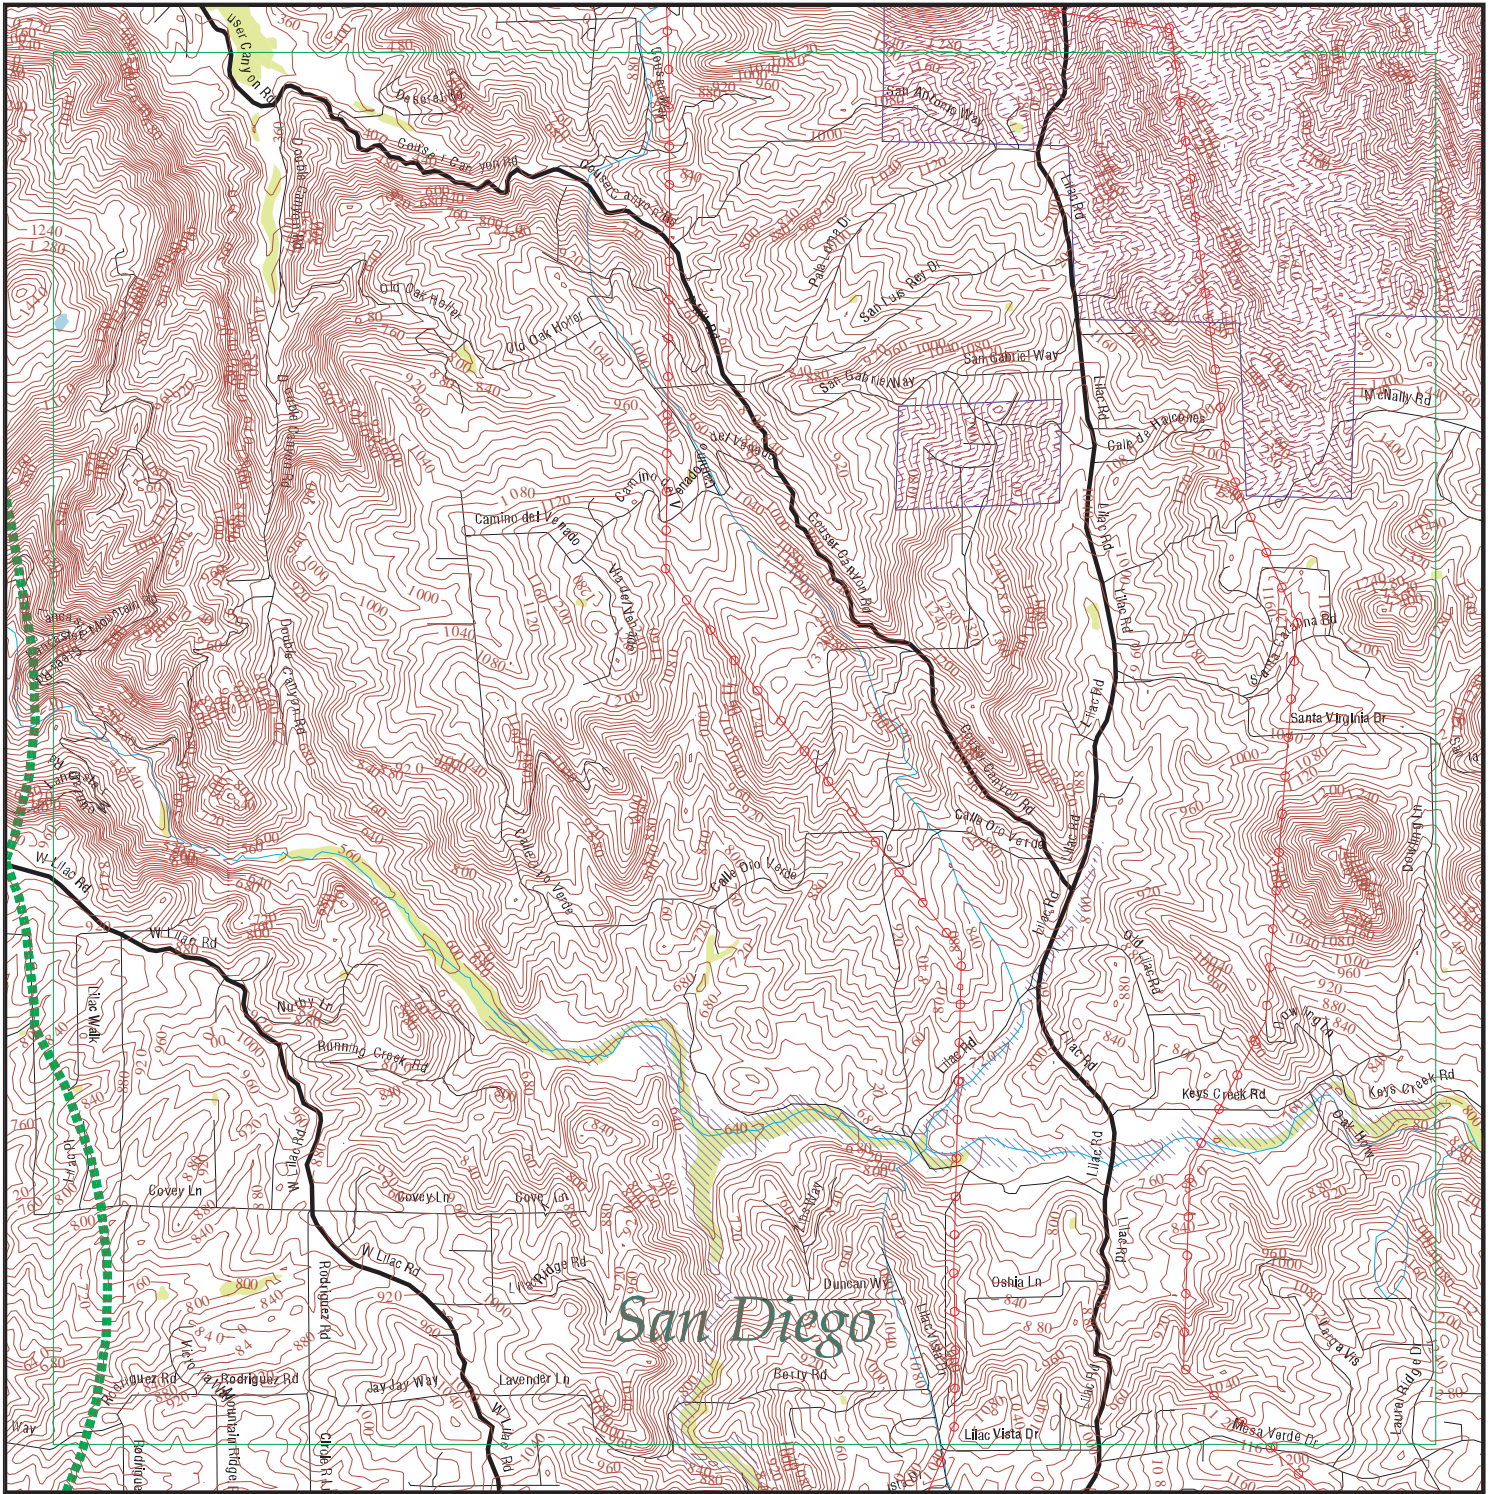

Count: 26 records

Used oil transporter: No

Hazardous Waste Summary:

Waste code: D000  
Waste name: Not Defined

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110012251794

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

36	<b>IVY DEL TRAILER PARK</b> <b>25235 N CENTRE CITY PARKWAY</b> <b>ESCONDIDO, CA 92026</b>	WDS	S105255735 N/A
	CA WDS: Facility ID: San Diego 000000098 Facility Type: Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities, communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day). Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements. NPDES Number: Not reported Subregion: 9 Facility Telephone: Not reported Facility Contact: IVAN POTTS Agency Name: POTTS IVAN AND ADELE Agency Address: 25235 N CENTRE CITY PARKWAY Agency City,St,Zip: ESCONDIDO 920268904 Agency Contact: IVAN POTTS Agency Telephone: 7607452131 Agency Type: Private SIC Code: 7033 SIC Code 2: 4951 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category. Primary Waste: DOMEST Waste Type2: Not reported Waste2: Domestic Sewage Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category. Secondary Waste: Not reported Secondary Waste Type: Not reported Design Flow: 0 Baseline Flow: 0 Reclamation: No reclamation requirements associated with this facility. POTW: The facility is not a POTW. Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality. Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: On June 13, 1995, the Department of Transportation notified the Department of Environmental Health (DEH) of possible petroleum hydrocarbon impacts that was discovered during drilling activities on West El Norte Parkway which is adjacent to the Shell site. On June 15, 1995, Case H20342-001 was opened as a complaint for the Shell site. On November 5, 1997, ten soil samples were collected and analyzed under the direction of DEH as part of product piping upgrade activities. The laboratory results indicated that a release of petroleum hydrocarbons had occurred. On March 18, 1998, a Limited Phase II Investigation was conducted as part of a due diligence

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

**SHELL SERVICE STATION (Continued)**

**1004676026**

investigation. This work consisted of drilling a total of 13 soil borings (DD-1 through DD-13) and analysis of 40 soil samples. Borings DD-4 and DD-5 were converted into groundwater monitoring wells. The laboratory results indicated there had been a release from the operating gasoline underground storage tank system. On August 28, 1998, DEH issued a Notice of Responsibility to Shell Oil Products US and the Lucas Family Trust ET AL (property owner). Between December 1998 and November 2003, six groundwater monitoring wells were installed (MW-2, MW-5 through MW-9) and two extraction wells (OW-1 and OW-2) were installed. In December 2003, six soil samples (D1 through D6) were collected and analyzed under the direction of DEH as part of dispenser upgrade activities. Based on laboratory results, the contractor overexcavated an unspecified amount of soil beneath sample locations D2 and D6. The site assessment activities and the product piping/dispenser upgrade testing provided sufficient information that defines the extent to soil impacts on-site. The consultant estimates approximately 18 cubic yards of impacted soil greater than 100 mg/kg total petroleum hydrocarbons remains in the areas of the northwestern and southwestern dispenser islands. Between December 1998 and January 2010, groundwater was monitored and sampled. The groundwater monitoring demonstrates that groundwater flow is to the south-southwest at a gradient of approximately 0.09 foot per foot. The groundwater monitoring and sampling has demonstrated that the dissolved plume is defined with the leading edge of the plume extending approximately 150 feet south of the site, beneath West El Norte Parkway. Currently, the mass of the dissolved impacts are limited to the site. The current Site Conceptual Model is presented in the April 30, 2009 Corrective Action Plan. Trend analysis and environmental fate and transport modeling were used to evaluate natural attenuation of the dissolved plume and a vapor health risk analysis was completed to evaluate potential health risk to the occupants of the service station building. The consultant has concluded that the trend analysis and environmental fate and transport modeling have demonstrated that the dissolved plume is stable in aerial extend and the concentrations are decreasing overtime. Benzene has been below the primary maximum contaminant level (1 ug/l) since April 2004, MTBE will reach it secondary maximum contaminant level (5 ug/l) by 2013, and TBA will reach its California Action Level (12 ug/l) by 2013. The consultant also concluded that the residual-dissolved phase contaminants do not pose a risk to human health, nearby receptors, and/or the environment. According to the City of Escondido there are no plans to install water supply wells in the site vicinity. Based on available data, DEH concurs with the consultants conclusions.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	P001
Waste name:	2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Waste code:	P042
Waste name:	1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-
Waste code:	P075
Waste name:	NICOTINE, & SALTS
Waste code:	P081
Waste name:	NITROGLYCERINE (R)
Violation Status:	No violations found

Status: Open - Remediation  
Status Date: 04/03/2000  
Lead Agency: SAN DIEGO COUNTY LOP  
Case Worker: CB  
Local Agency: SAN DIEGO COUNTY LOP  
RB Case Number: 9UT2642  
LOC Case Number: H20281-001  
File Location: Local Agency  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: On December 10, 1993 product piping was replaced at the site. Soil samples collected during product piping upgrades indicated elevated concentrations of petroleum hydrocarbons. Based on this result, Unauthorized Release H20281-002 was opened. Please see submitted ESI data for further details.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Removed one used-oil UST and replaced with 550-gallon used-oil UST. 2/90 Soil gas survey indicated hydrocarbon concentrations were present in the northern, southern and eastern portions of the site. 4/91-5/91 Seven groundwater monitoring wells (MW-1 through MW-7) were abandoned and seven groundwater monitoring wells (RMC-1 through RMC-7) were installed. 2/92 Replaced product lines. 6/92 Slug and step drawdown groundwater tests were performed. Estimated hydraulic conductivity was 0.5 to 12.6 feet/year. 9/95-11/95 Five groundwater monitoring wells (MW-18 through MW-22) were installed. 3/97 Six borings (B-22 through B-27) were advanced to approximately 10 to 15 bgs. 8/98 Prepared a remedial feasibility study, recommending monitoring plume stability. To address MTBE, proposed installing a tank cavity well for use in overpurge and DPE pilot tests and interim remedial measures. 7/99 Installed and over-purged one tank cavity well. 8/99 Completed two overpurge events on the tank cavity well with subsequent 8-hour and 24-hour DPE events. Approximately 369 pounds of hydrocarbon vapors and 17,580 gallons of groundwater were recovered. 10/99 Completed one tank cavity overpurge and 8-hour DPE event. Approximately 203 pounds of hydrocarbon vapors and 5,400 gallons of groundwater were recovered. 8/00 Submitted MTBE vapor sampling cancellation request. DEH approved. 10/00-11/00 Performed 8-day DPE event on eleven wells. Approximately 1,670 pounds of hydrocarbon vapors and 4,800 gallons of groundwater were recovered. 11/00 Sewer line assessment was performed in West Mission Avenue. MTBE concentrations in groundwater ranged from 5 to 29 8g/L. 11/00 DEH requested information regarding potential MTBE impact on nearby receptors. Site classified as priority B. 1/01 United Oil Corporation purchased the site from ExxonMobil Oil Corporation and the service station building and pump islands were demolished. One used oil UST, three gasoline USTs and all associated piping were removed under DEH supervision. 7/01 Four soil gas probes were installed for health risk assessment. Results of the health risk assessment were presented in TRCs Risk Assessment report dated 20 September 2001. 11/01 Surveyed all monitoring wells per state requirement AB2886. 3/02 Two groundwater monitoring wells were installed for additional sewer trench assessment. 8/02 Excavated and disposed of 957.48 tons of soil and 33,600 gallons of groundwater during site redevelopment activities. Removed one 1,000- gallon

used-oil UST discovered during excavation activities. 4/05 Submitted revised additional site assessment and excavation report to the DEH. 1/06 Submitted work plan to install 4 wells for additional groundwater assessment to the DEH. 4/07 Environmental consulting and management activities transferred from TRC to ETIC Engineering, Inc. 7/07 ETIC recommended revising the 1/06 work plan to include only 3 wells. 9/07 DEH requested purge-sampling of all the sites wells. 2014 CAP for Natural Attenuation Approved. OK to close

File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Contaminated soil and a sheen on water was noted during removal of three underground storage tanks on November 28, 1995. Total petroleum hydrocarbons as gasoline/diesel and benzene and other gasoline constituents in soil were confirmed in by the analytical data. Groundwater sampling has ongoing since December 1996. See ESI for additional information.

Lead Agency:	SAN DIEGO COUNTY LOP
Case Worker:	CH
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT3815
LOC Case Number:	H04389-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	<p>On January 8, 1999 two underground storage tanks (USTs) containing gasoline and diesel were removed from the site. Pondered product was observed below the diesel UST, and a petroleum sheen was observed on groundwater in the gasoline UST excavation. DEH-directed soil sampling from beneath the USTs showed total petroleum hydrocarbons (TPH) from gasoline and diesel at a maximum of 630 and 520 milligrams per kilogram (mg/kg), respectively. Unauthorized Release H04389-001 was opened based upon these observations and results. Soil assessment was initiated in January 2002, when six borings were drilled in the vicinity of the former USTs. Additional soil sampling was completed during drilling of six groundwater monitoring wells in January 2002, three groundwater monitoring wells in October 2005, and four groundwater monitoring wells in March 2009. Delineation of petroleum-impacted soil was completed in January 2008 when nine borings were drilled. Petroleum hydrocarbons were detected at depths of 3.5 to 20 feet below ground surface (bgs), with the majority of the contamination detected at depths of less than 8 feet bgs. Petroleum-impacted soil was primarily located in the vicinity of the former gasoline UST and in the capillary fringe. The consultant concluded that approximately 1,424 cubic yards of petroleum-impacted soil was present at the site, of which approximately 940 cubic yards contained concentrations of petroleum hydrocarbons exceeding 100 mg/kg. Groundwater assessment was initiated in January 2002, when grab groundwater samples were collected from six borings. Petroleum constituents were detected in all six groundwater samples. Groundwater assessment proceeded with the installation of 13 groundwater monitoring wells from 2002 to 2009, one of which was installed off-site. A Corrective Action Plan (CAP) and CAP Addendum were approved on February 9, 2011. The CAP and Addendum proposed to remediate the site by source zone soil removal and subsequent oxidation of contaminants by injection of hydrogen peroxide followed by bacteria and nutrients. Excavation of soils in the source zone, an area approximately 50 feet wide by 40 feet long in the vicinity of the former USTs, proceeded in June 2011. Three injection/interceptor trenches were also excavated down-gradient of the source area. Prior to back-filling, hydrogen peroxide was added to the source zone excavation and trenches and perforated piping was installed to facilitate future addition of amendments. The excavations resulted in removal of approximately 1002.25 tons (650 cubic yards) of</p>

petroleum-impacted soil from the site and destruction of five groundwater monitoring wells. Confirmation soil sampling completed after excavation of the source zone showed TPH from gasoline and diesel at a maximum of 14 and 26 mg/kg, respectively. The consultant estimates that approximately 120 cubic yards of petroleum-impacted soil with concentrations of petroleum hydrocarbons exceeding 100 mg/kg remains at the site. Bacteria and nutrients were applied to the source zone and trenches in July and October 2011, with groundwater monitoring and sampling completed after each application. In addition to analysis for petroleum constituents, select groundwater samples were analyzed for natural attenuation parameters and hydrocarbon-degrading bacteria. After the second amendment, benzene and methyl tert-butyl ether (MTBE) were the only petroleum constituents detected at concentrations exceeding the maximum contaminant level (MCL). Benzene was detected in groundwater samples from monitoring wells MW4 and MW11 at 9.9 and 1.8 micrograms per liter (ug/l), respectively; and MTBE was detected in the groundwater sample from monitoring well MW7 at 230 ug/l. In February and March 2012, additional amendments were added to the trenches to facilitate anaerobic degradation of MTBE in the vicinity of monitoring well MW7. The amendments included bacteria, nutrients, and an electr

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

**FINDS:**

Registry ID: 110002942040

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Aquifer used for drinking water supply, Indoor Air, Soil Vapor, Under Investigation

Potential Contaminants of Concern: Diesel, Gasoline  
Site History: This case was opened (in 12/9/05) after contamination was discovered in soil samples collected during a product line and dispenser upgrade in January 2004. A maximum of 2,910 mg/kg total petroleum hydrocarbons as gasoline and 642 mg/kg as diesel were detected in soil. Benzene (3,540 ug/kg), MTBE (3,300 ug/kg) and other volatile organic compounds were also detected. The soil samples collected beneath the dispensers near the car wash had the highest concentrations of contaminants. Seven permanent groundwater wells were installed at the site in September 2007 and three off-site wells were installed in 2009. MTBE was detected in a down-gradient off-site well at a concentration of 2,300 ug/l in June 2009. Additional assessment is warranted, Please see EDI for additional information.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

**GLIDDEN CO DBA ICI PAINTS (Continued)**

**1007117581**

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D017

Waste name: 2,4,5-TP (SILVEX)

Waste code: D035

Waste name: METHYL ETHYL KETONE

Violation Status: No violations found

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LOC Case Number: Not reported  
File Location: Regional Board  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating  
Site History: The property was developed as a new car dealership in 1971. Two 1,000-gallon underground storage tanks (USTs), one for gasoline and one for waste oil were installed at the facility. In January 1987, the USTs were removed. The waste oil tank appeared to be in good shape, and no additional work was performed on that tank excavation. However, the gasoline tank had numerous holes in it, and there were indications of impacts to soil and groundwater. Some impacted soils were removed from the gasoline tank excavation and immediate surrounding area in February 1987. A 12-inch diameter groundwater recovery well (RW-1) was installed in the excavation backfill, and three 2-inch groundwater monitoring wells (MW-1 to MW-3) were installed around the former location of the gasoline UST. Initial sampling results from late February 1987, found benzene present in MW-3 at 28 ug/l . Impacted groundwater was pumped from RW-1 for a

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

WITT LINCOLN MERCURY (Continued)

S104809590

period of several months, treated, and released into the sewer. In June 1987, PCE and TCE were reported in the groundwater from MW-3 (PCE - 6,300 ug/l, and TCE - 2,600 ug/l). Subsequent monitoring events during the remainder of 1987 confirmed the high PCE and TCE concentrations in MW-3 (up to 9,200 ug/l and 4,100 ug/l respectively). In April 1989, five additional groundwater monitoring wells were installed at the site, mostly along the eastern side of the parcel (MW-4 to MW-7). One well, MW-8, was installed between the service bay buildings, -50 feet west of the property line. Laboratory results from the initial monitoring of the new wells, plus the pre-existing three monitoring wells again showed high concentrations of PCE and TCE in MW-3 (5,100 ug/l and 4,000 ug/l respectively), and in MW-4 (12,000 ug/l and 7,300 ug/l respectively). Distribution of the solvent impacts was relatively limited in extent with PCE concentrations decreasing to 64 ug/l in MW-8 (-60 feet from MW-4), 55 ug/l in MW-5 (-40 feet from MW-4), and 49 ug/l in MW-1 (-35 feet from MW-4). Source for the PCE and TCE was not known, but was variously attributed to the former waste oil tank on site, the adjacent sewer dumping during construction of the adjacent senior condo complex, and an old dry cleaning establishment to the northeast of the site. Results from two subsequent monitoring events in late August 1989 and February 1990 showed decreasing concentrations of most constituents, with neither PCE nor TCE being detected in either MW-3 or MW-4 in February 1990. In February 1990, PCE and TCE were detected in MW-1 (17.2 and 12.7 ug/l) and MW-8 (51.9 and 122 ug/l). During 1987-1990, several other constituents were present in one or more of the well samples. These included trans-1,2-dichloroethene (up to 4,800 ug/l in MW-4, and 3,500 ug/l in MW-3), chlorobenzene (up to 6.8 ug/l), chloroform (up to 4.0 ug/l), dichlorobenzenes (up to 160 ug/l), and vinyl chloride (up to 310 ug/l). While attention was focused on the solvent impacts, the gasoline impacts were mitigated either by the pump-and-treat system, or natural attenuation. San Diego County Department of Environmental Health issued a closure letter for the gasoline impacts on December 17, 1990. No groundwater monitoring was performed at the site from February 1990 until late July 2009. During August 2009, 16 in-ground hydraulic lifts were removed from the site. Extensive soil contamination was encountered around many of the lifts as they were removed, and over 500 tons of impacted soils were removed from the site and hauled away. Although no groundwater samples were collected during the soil excavations, impacts to soil were present at and below the level where groundwater began to seep into the open excavations. This implied that there could be additional groundwater impacts present related to the leaking hydraulic lift cylinders.

Case Worker: SJP  
Local Agency: Not reported  
RB Case Number: 2090051  
File Location: Regional Board  
Potential Media Affected: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)  
Site History: Approximately 212 tons of contaminated soil excavated from the northwest corner of the building, which was formerly used as a dry cleaning facility. The Regional Board has requested the submittal of a work plan that addresses the source and nature of VOCs in soil gas. Ground water monitoring activities are being conducted to evaluate temporal and spatial trends in contaminant concentrations. This case was opened due to insolvent r.p. (David Kahn) for case SL209404237.

Site History:

A preliminary site assessment was performed by IT Corporation in 1989 after a soil gas survey revealed the presence of subsurface hydrocarbon vapors. Ten soil borings were drilled; five were converted to groundwater monitoring wells. Groundwater sample analytical results indicated that the groundwater beneath the site had been impacted by gasoline and trace amounts of chlorinated solvents, particularly tetrachloroethene (PCE), a common dry cleaning solvent. The source of the PCE appears to be a nearby dry cleaner. In 1992, IT Corporation performed a soil gas/groundwater survey and collected soil samples near the underground storage tanks (USTs). In 1993, additional soil borings were drilled by IT Corporation and two additional monitoring wells were installed. Based on the results of site assessments performed in 1989, 1992, and 1993, IT Corporation concluded that: 1) The lateral extent of petroleum hydrocarbon-impacted soil was limited to the area near the USTs; 2) The lateral extent of dissolved-phase hydrocarbons was adequately assessed except to the south below the nearby building; and 3) Solvents detected in groundwater were unlikely to be the result of onsite operations at the former service station. All 76 station structures, including the UST system and dispenser islands, were removed from the site in July 1999. The station formerly consisted of one diesel and two gasoline USTs, two dispenser islands, and a cashier's booth. Approximately 531 tons of soil was excavated and shipped offsite for disposal as part of the station demolition and UST removal activities. On January 22, 2002, well MW-21 was installed southwest of the site. Concentrations in soil samples analyzed from boring MW-21 were below laboratory detection limits for all analytes, except for 0.087 milligrams per kilogram (mg/kg) methyl-tertiary-butyl-ether (MTBE) in the sample collected at 29 feet below grade (fbg). Based on the results of this investigation, TRC concluded that the lateral extent of dissolved-phase hydrocarbons does not appear to be adequately assessed to the south, and recommended further assessment. On May 18, 2006, vapor extraction wells SVE-1 and SVE-2 were installed at the site to a depth of approximately 15 fbg and were constructed with 4-inch diameter PVC wells with 0.020-inch wide perforations. Hydrocarbon concentrations in soil samples collected from the well borings ranged from below laboratory detection limits to 4.6 mg/kg for total purgeable petroleum hydrocarbons (TPPH). MTBE concentrations ranged from below laboratory detection limits to 7.3 mg/kg. Benzene concentrations were below laboratory detection limits for all samples analyzed, with the exception of the two samples collected from SVE-1, with 0.0039 and 0.0042 mg/kg. Semiannual groundwater monitoring and sampling began in October 1993. Since removal of the UST system in 1999, dissolved-phase hydrocarbon concentrations have generally remained stable or risen in wells down gradient of the former UST cavity. The site is located on the south side of West Mission Avenue in Escondido at an elevation of approximately 650 feet above mean sea level. The site is bordered on the east and west by parking lots and on the south by a building with two businesses, Evans Tire & Service Center and T-Shirt Mart. Behind the building is asphalt parking. The site is currently a parking lot for the two businesses. Based on published literature, the site is underlain by older Pleistocene alluvium, consisting of nonmarine gravel, sand and silt. These deposits overly highly weathered, in situ crystalline rocks, known as residuum. The residuum is derived from the granitic rocks of the Cretaceous-aged Southern California Batholith (Woolfenden, 1989). Previous

investigations indicate that the site is underlain by silty sands and sandy silts, overlying weathered granitic bedrock to the maximum depth investigated of approximately 30 fbg. The site is located in the Escondido Hydrologic Subarea

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

RB Case Number: 9UT3694  
LOC Case Number: H05484-004  
File Location: Local Agency  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: On 3 October 1997, a damaged valve under the eastern gasoline dispenser resulted in the release of approximately four gallons of gasoline. An unauthorized release report was submitted to the DEH on 7 October 1997 summarizing the incident and detailing the repair of

MAP FINDINGS  
FOCUS MAP 12

MISSION MOBIL (Continued)

S109277051

the valve. An unauthorized release case was subsequently opened by the DEH on 4 August 1998. On 27 August 1998, station upgrade activities were performed at the site. Two hand auger soil borings (HA3 and HA4) were advanced in the vicinity of the eastern dispenser island. Soil samples from soil boring HA3 were collected at depths of 4, 9, and 15 feet below ground surface (bgs) and analyzed for Total Petroleum Hydrocarbons as gasoline and diesel (TPH-g and TPHd), benzene, toluene, ethylbenzene, and total xylenes, (BTEX), and methyl tertiary butyl ether (MTBE). The maximum concentration of TPH-g was 12,000 milligrams per kilogram (mg/kg) at 9 feet bgs. The maximum concentrations of TPH-d, benzene, and MTBE were 6,000 mg/kg, 18 mg/kg, and 69 mg/kg, respectively, at 15 feet bgs. No soil samples were analyzed from soil boring HA4. On 17 November 1999, soil borings (B-1, MW-1, and MW-2) were advanced at the site. Soil borings MW-1 and MW-2 were converted into groundwater monitoring wells. Maximum concentrations of TPH-g and TPH-d in soil samples analyzed from the borings were 3,500 mg/kg and 1,600 mg/kg, respectively, from MW-1 at 10 feet bgs. MTBE concentrations ranged from ND to 4.7 mg/kg (B-1 at 10 feet bgs). Benzene concentrations were not detected above the laboratory reporting limits in any soil samples. During the advancement of the soil boring MW-3, a diesel product line was encountered at 4 feet bgs. The line was damaged releasing approximately one gallon of diesel product into the subsurface. On 18 November 1999, at the request of the DEH, one soil boring (PD) was advanced below the damaged diesel product pipe. Soil samples were collected at depths of approximately 6, 9, and 11 feet bgs. TPH-g concentrations in soil samples ranged from 2.1 mg/kg (11 feet bgs) to 2,500 mg/kg (6 feet bgs). Maximum TPH-d concentration was 7,500 mg/kg at 6 feet bgs. One soil sample (PD-1/6), was analyzed for MTBE, and a concentration of 0.44 mg/kg was detected. On 31 May and 1 June 2000, three soil borings (B-1A, B-2, and MW-3) were advanced to depths of approximately 15, 15, and 25 feet bgs, respectively. Soil boring MW-3 was moved from its original location where the diesel product pipe was damaged to 20 feet south. Maximum TPH-g and TPH-d concentrations were 7,000 mg/kg and 3,300 mg/kg, respectively, in soil boring B-2 at 11 feet bgs. Maximum MTBE and benzene concentrations were 47 mg/kg and 3.8 mg/kg, respectively, in soil boring B-2 at 13. In a letter dated 11 December 2000, the DEH classified the site as Priority A and requested a work plan to further assess the extent of MTBE. On 11 and 12 July 2001, four additional groundwater monitoring wells (MW-4 through MW-9) were installed. Seventeen soil samples were collected and submitted for analyses. The maximum TPH-g concentration was 1.3 mg/kg from soil boring MW-5 at 15 feet bgs. The maximum MTBE concentration was 110 mg/kg in soil boring MW-9 at 10 feet bgs. Benzene concentrations were not detected above the laboratory reporting limits in any soil samples. In August 2001, a 24-hour dual-phase extraction (DPE) test was conducted using wells MW-1, MW-2, MW-3, and MW-5. Approximately 97.47 pounds of hydrocarbon vapors and 4,800 gallons of groundwater were recovered during the test. A radius of influence of 92 feet was calculated from the DPE test data. Based on the results, TRC concluded that DPE appeared to be a feasible remedial option for hydrocarbon remediation in soil; however, effectiveness with respect to groundwater remediation was inconclusive. Drawdown due to DPE operation was not reported. On 8 February 2002, the service station was closed and a chain-linked fence was placed around the perim

Registry ID: 110002808212

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007  
Waste name: CHROMIUM

Waste code: D002

Waste code: F006  
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Violation Status: No violations found

**FINDS:**

Registry ID: 110002910397

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Latitude:	33.1259969
Longitude:	-117.0864113
Case Type:	LUST Cleanup Site
Status:	Open - Site Assessment
Status Date:	05/12/2010
Lead Agency:	SAN DIEGO COUNTY LOP
Case Worker:	CB
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT3858
LOC Case Number:	H03089-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	Soil sampling was completed in 1998 in association with a permit to re-line the three UST's on site. TPH(g), BTEX, and MTBE were found in the soil samples. In 2000, 2 soil borings were advanced and completed as monitoring wells. Soil and groundwater samples contained TPH(g), BTEX, and MTBE. In 2006 an additional 4 borings were advanced and completed as monitoring wells. They were located closer to each property line. Only soil samples from monitoring well four contained contaminants, which were TPH(g), TPH(d), and BTEX. However, groundwater samples from every monitoring well showed high levels of TPH from gas and diesel, BTEX, and associated oxygenates including MTBE. On 11/21/2007 a workplan was approved to conduct vapor sampling and a health risk assessment for occupants of the building on site and buildings off-site on the properties to the east and west, and to construct four additional groundwater monitoring wells off-site. This workplan was re-approved for an additional 6 months on 12/11/08. DEH has not yet received a site assessment report for this workplan, or any groundwater monitoring data since 2005. Please see the Environmental Data tab for additional site specific information.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

 Case Worker: EP  
 Local Agency: SAN DIEGO COUNTY LOP  
 RB Case Number: 9UT2089  
 LOC Case Number: H05156-002  
 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History: Contamination was identified during a tank upgrade that indicated soil and groundwater contamination occurred on site. Site assessment activities identified LPH on site. Removal of the free product (LPH) was conducted utilizing soil vapor extraction to reduce the impact of the contamination on site. This site is currently being monitored to determine the residual extent of contamination on site. Please see the Environmental Data tab for any additional site specific information.

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History:

Soil contamination was discovered during underground storage tank removal and replacement in October 1993. Groundwater monitoring has been ongoing since This case was opened following the discovery of gasoline contaminated soil during a station upgrade in October 1993. Five underground storage tanks (USTs) and associated piping were removed and four new USTs were installed. Although one of the tanks appeared corroded and some soil in the tank excavation was discolored and odorous, the highest concentrations of gasoline (3,400 mg/kg) were initially detected in soil samples collected beneath piping. Further excavation of the tank area uncovered higher gasoline concentrations in the excavation. Ninety-one soil samples were collected from the site and analyzed for gasoline, diesel and volatile organic compounds including samples from eighteen soil borings that were drilled in 1994, and additional samples in 2004 and 2009. Approximately 800 tons (approximately 600 cubic yards) of soil were excavated during tank removal and replacement in 1993. The remaining soil impacts are near the former underground storage tank area and piping. The consultant estimated that approximately 13 cubic yards of gasoline contaminated soil remain at the site. Six monitoring wells (5 on-site and one off-site) were installed in

U001571375

association with the site investigation between 1993 and 2009. Groundwater monitoring began in November 1993 and continued through June 2012. Free product has not been detected in monitoring wells associated with the site. Dissolved phase gasoline constituents are present in groundwater emanating from the former tank area and extending down-gradient. Low levels of gasoline and xylenes, were the only dissolved phase constituents detected in the off-site down-gradient well MW-19. Well MW-19 is located across Escondido Boulevard to the west of the site. The consultant stated that the plumes are adequately defined, and concentrations have decreased over time. Between November 2007 and September 2008, thirteen oxygen injection events were conducted on well MW-1 in order to inject oxygen into the groundwater in an effort to increase or stimulate biodegradation of hydrocarbons. In June through August 2009, eight enhanced fluid recovery events (EFR) were conducted on MW-1 and MW-6. Approximately 7,055 gallons of groundwater and an unknown quantity of soil vapor were removed during these events. Groundwater beneath the site is designated as beneficial use for municipal, agricultural and industrial supply. The consultant contacted the City of Escondido regarding current and future use of groundwater in the area. The City stated that there was no current or planned future use of groundwater in the site vicinity. As of June 8, 2012, only MTBE and TBA exceeded the groundwater maximum contaminant levels (MCLs) and State Notification level in groundwater samples from the site. Gasoline, ETBE, and TAME were also detected in groundwater samples. The consultant estimated the time it would take for the dissolved constituents to reach MCLs and State Notification Levels using trend lines and natural attenuation rate constants derived from first order decay equations. The consultant estimated it would take up to 18 years for TBA to reach the State Notifications level, and MTBE would take up to 61 years to reach the MCL of 13 ug/l. Utilities located in the site vicinity include telecommunication cables (Time Warner Telecom, Cox Communication, Level 3 Communication). The consultant stated that since the depth to the utilities was estimated to be approximately 5 to 6 feet and groundwater generally occurs at 9 to 15 feet, it was unlikely for groundwater to impact the utility trenches. The consultant conducted a sensitive receptor survey for the site and concluded that the site did not pose a risk to any identified sensitive receptors. The nearest surface water body is Escondido Creek, located approximately 1,1

Site History:

A City of Escondido (City) property located at the intersection of North Escondido Boulevard and Woodward Avenue was formerly occupied by a service station constructed in 1962. The City had purchased the property in the late 1980s in association with plans to construct a parking lot for a proposed cultural complex to be located north of Woodward Avenue. However, a tenant continued to operate the station until 1989, when its lease was terminated and the service station was demolished. On December 13, 1989, three underground storage tanks (USTs) associated with the former service station were removed, including a 12,000-gallon and a 10,000-gallon tank, both of which contained gasoline, and a 280-gallon waste oil tank. Significant odors and soil staining were noted by the County inspector during removal of the USTs and DEH Case #H03481-001 was opened. A preliminary site assessment was performed in March 1990 that included the drilling and sampling of nine exploratory borings. Five of the borings were converted to groundwater monitoring wells. Analytical results for samples collected during the investigation confirmed that unauthorized releases from the gasoline and waste oil USTs had impacted soil and groundwater beneath the site. An additional five groundwater monitoring wells, three of which were located along North Escondido Boulevard, were installed in March 1991 and four wells were installed in July 1993, two of which were located offsite. The frequency of groundwater monitoring and sampling was generally quarterly from 1992 through mid-1996. Water levels were measured during this period at depths of approximately 10 to 15 feet below top-of-casing reference points. The groundwater flow direction was interpreted from water level data to be south-southwesterly. Free product was detected in Monitoring Well MW-6 for the first time in January 1994 and attained its maximum observed apparent thickness of 0.38-foot in May 1994. Free product was absent from MW-6 after 1994 until it reappeared in 2000. Subsequent monitoring and sampling rounds were performed irregularly after 1996 until a quarterly schedule resumed in 2011. Free product has not been observed in MW-6 since 2006 when a trace was reported. Site assessment data obtained through 1993 indicated that the areal extent of gasoline impacts to soil was approximately 15,800 square feet and that the impacts extended to depths of 10 to 15 feet below grade. In December 1993, DEH required additional soil and groundwater investigation to assess the dissolved contaminant plume boundaries to the south and west. DEH

also requested preparation of a remedial action plan. Pilot testing was performed at the site to evaluate soil vapor extraction (SVE) and air sparging (AS) technologies from October 1994 through May 1995. Two dual SVE/AS wells were installed within the footprint of the former gasoline UST excavation and two additional SVE/AS wells were installed between the excavation and North Escondido Boulevard. Based on findings of the pilot tests, the consultant concluded that SVE and AS were feasible to remediate discreet areas of soil and groundwater, but not cost effective to implement over the site as a whole. A CAP was submitted in January 1997, followed by submittal of a CAP addendum in September 1997. However, adequate delineation of the leading edge of the dissolved contaminant plume had not been achieved. The CAP was conditionally approved on July 30, 1998, with the requirement that additional site investigation be performed before public notification and final CAP concurrence could proceed. The additional down-gradient investigation was completed in December 1998 with the installation and sampling of a fifteenth monitoring well. A three-phase approach to site remediation was recommended in the CAP, involving excavation of impacted soil in the source areas, air sparging within the former gasoline tank excavation, and verification monitoring/nat

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT3966
LOC Case Number:	H20326-003
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Three underground storage tanks were removed from the site in December of 2005. A release had occurred from the former dispenser island. Site assessment for soil and groundwater contamination has been proceeding. Verification is underway to distinguish this site's release from a release that occurred to the north on the other side of West Washington. Joint sampling of wells is being performed on a semi-annual basis.

Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
LOC Case Number:	H04771-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	Underground storage tank (UST) system upgrade activities were performed in January 2003 at the 3-acre site, a commercial truck leasing, maintenance, repair, and fuel facility. Two USTs, one with a capacity of 12,000 gallons that contains diesel and one containing gasoline with a 10,000-gallon capacity, are included in the system and remain in service. The existing fuel dispensers and product piping were removed and replaced during the upgrade activities. Analyses of soil samples collected from beneath the existing fuel dispensers and piping indicated that an unauthorized release of diesel and gasoline had occurred. The maximum detected diesel concentration in the soil samples was 3,400 milligrams per kilogram (mg/kg). Gasoline was detected at a maximum concentration of 170 mg/kg. Based on the soil sample analytical results, DEH Case #H04771-001 was opened on January 27, 2003. Approximately 40 tons of diesel-impacted soil was subsequently excavated from beneath product piping and the dispensers and treated offsite. Site assessment activities were initiated in March 2004 by Frey Environmental, Inc. (Frey) with the advancement and sampling of four borings to a depth of 20 feet below ground surface (bgs). Groundwater was encountered in the borings at approximately 18 feet bgs. Diesel was detected in soil samples collected at a depth of 15 feet bgs, while gasoline was detected in one sample collected at the same depth. The maximum detected concentrations of diesel and gasoline in the samples were 370 and 19 mg/kg, respectively. The aromatic hydrocarbons (benzene, toluene, ethylbenzene, and xylene [BTEX]) and fuel oxygenates (including methyl-tert-butyl ether [MTBE]) were not detected in the soil samples. Based on the soil sample results, Frey estimates the volume of impacted soil remaining in place to be less than five cubic yards. During the March 2004 investigation, one groundwater grab sample was collected from each boring. Diesel was detected in two groundwater grab samples and MTBE was detected in each of the four samples, indicating that groundwater was impacted by the unauthorized release. Gasoline, the aromatic hydrocarbons, and the remaining fuel oxygenates were not detected in the groundwater grab samples. Seven on-site groundwater monitoring wells and two off-site wells were subsequently installed in association with site assessment activities performed in 2004, 2005, and 2009. Based on water level measurements, Frey has determined the groundwater flow direction to be to the south-southwest. Analytical results reported for 2004 through 2006

**RYDER TRUCK RENTAL LC-1093 (Continued)**

**S108219023**

indicated the detection of diesel, gasoline, BTEX, MTBE, tert-butyl alcohol (TBA) and tert amyl ethyl ether (TAME) in groundwater samples collected from one or more of the six existing wells. However, results for samples collected since 2007 indicate that BTEX and TAME are no longer chemicals of concern (COCs) for groundwater. Analytical results reported for the most recent monitoring and sampling round, performed in June 2011, indicate continued detection of diesel, gasoline, and TBA in the sample collected from one well located in the source area. MTBE was detected in samples collected from four of the wells at a maximum concentration of 21 micrograms per liter (g/l). MTBE and TBA are thus the remaining COCs for site groundwater. Inquiries made by Frey to the City of Escondido confirmed that drinking water for the municipality is imported. Escondido Creek, a concrete-lined drainage, is located approximately 410 feet south of the site. Frey prepared trend analyses using the analytical data for samples collected from two wells with the highest historical concentrations of MTBE through December 2010. Based on linear regression calculations, it was estimated that 10.7 to 11.6 years would be required for MTBE concentrations to fall below its Secondary MCL of 5 g/l. Frey also calculated approximately 15 years as the minimum time required for

Status: Case Closed  
Case Number: 9UT2406  
Local Case: H06065-001  
Substance: Unleaded Gasoline  
Qty Leaked: 0  
Abate Method: Excavate and Dispose - remove contaminated soil and dispose in approved site  
Local Agency: San Diego  
How Found: Tank Closure  
How Stopped: Repair Tank  
Source: Unknown  
Cause: Unknown  
Lead Agency: Local Agency  
Case Type: Soil only  
Date Found: 02/22/1993  
Date Stopped: 02/22/1993  
Confirm Date: / /  
Submit Workplan: 2/22/93

**FINDS:**

Registry ID: 110002685988

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LUST:

Region:	STATE
Global Id:	T0607302647
Latitude:	33.122629
Longitude:	-117.081573
Case Type:	LUST Cleanup Site
Status:	Open - Site Assessment
Status Date:	11/30/2010
Lead Agency:	SAN DIEGO COUNTY LOP
Case Worker:	EM
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	9UT3886
LOC Case Number:	H38279-001
File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	From 1921 to 1971 the site was a service station, last operated by Unocal. In 1974, the property was redeveloped and currently is the site of a bank. Site assessment work began after discovery of a release on an adjacent property. The groundwater gradient is to the north. Free product is still found in several on-site wells. Site assessment is not complete.

73	<p><b>ESC. CITY MAINTENANCE YARD</b>  <b>475 N SPRUCE ST</b>  <b>ESCONDIDO, CA 92025</b></p> <p>LUST:  Region: STATE  Global Id: T0607399221  Latitude: 33.121529  Longitude: -117.093793  Case Type: LUST Cleanup Site  Status: Open - Site Assessment  Status Date: 06/13/2000  Lead Agency: SAN DIEGO RWQCB (REGION 9)  Case Worker: SM  Local Agency: Not reported  RB Case Number: 9UT4019  LOC Case Number: Not reported  File Location: Local Agency  Potential Media Affect: Aquifer used for drinking water supply  Potential Contaminants of Concern: Gasoline  Site History: The City of Escondido Maintenance (Eastern Public Works) Yard site is currently used to maintain the City's fleet of vehicles. The facility is also used to store equipment used in City operations. A portion of the yard overlies the former City Sewage Treatment Plant, which was decommissioned in the 1950s. On August 26, 1999, a total of five underground storage tanks (USTs) were removed. Three tanks were removed from the property that had contained gasoline. A waste oil tank was also removed. At the time of the tank removal soil samples were collected from the tank excavation and dispenser area. The laboratory results indicated total petroleum hydrocarbon as gasoline (TPHg) up to 15,000 mg/kg and total petroleum hydrocarbons as diesel up to 7,900 mg/kg were detected. On September 2, 1999, the case was opened. The City began its site investigation in April 2001 with the drilling of four exploratory borings and the installation of five groundwater monitoring wells. This investigation did not result in definition of the limits of the soil contamination, but did confirm that groundwater was impacted. Groundwater samples collected from the borings using a hydropunch indicated TPHg concentrations of up to 520,000 ug/l, TPHd concentrations of less than 900 ug/l, benzene concentrations up to 11,000 ug/l, toluene concentrations up to 66,000 ug/l, ethylbenzene concentrations up to 10,000 ug/l, xylene concentrations up to 65,000 ug/l, and methyl- tert-butyl ether (MTBE) concentrations up to 37,000 ug/l. Free product has been observed in the well located southwest of the tank excavation (MW-5) up to 0.65 feet. During the last two sampling events free product was not observed. As of November 2007 a total of the 14 groundwater monitoring wells had been installed at the site. On November 15, 2007 a workplan to install one additional monitoring well was approved to complete the extent of groundwater delineation. The work plan was not implemented, but was re-authorized in 2011 and executed. Groundwater monitoring and sampling at the site resumed in July 2011. The maximum benzene concentration detected was 340 ug/l, while the maximum detected concentration of MTBE was 5,500 ug/l. TCE and PCE are also chemicals of concern for the site; due to elevated aromatic hydrocarbon concentrations, the detection levels for these chlorinated hydrocarbons are also elevated, potentially masking the magnitude of dissolved concentrations. A work plan for completing delineation of the dissolved plume was submitted to GeoTracker and approved by DEH in November 2013.</p>	<p><b>LUST</b>  <b>SLIC</b>  <b>HIST UST</b></p>	<p><b>U001571485</b>  <b>N/A</b></p>

Hazardous Waste Summary:

Waste code:                    D001  
Waste name:                    IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

**CITY OF ESCONDIDO (Continued)**

**S100733702**

Site History:

Three underground storage tanks (USTs) were discovered during street improvement activities at the northeast corner of Maple and Grand Streets in Escondido in December 1989. The USTs were located in the public right-of-way in a parking lot adjoining the sidewalk on Maple Street. Samples of the tank contents were collected on December 5, 1989, as witnessed by a DEH inspector. Analytical results for the samples indicated the presence of degraded gasoline, primarily as naphthalene, methylnaphthalene, phenol, and 2-methylphenol. The volatile organic compound (VOC) 1,2-dichloroethane was also detected at a maximum concentration of 1.2 milligrams per liter. The USTs were removed on January 24, 1990. During the removal, strong odors were noted as emanating from the excavation and stained soil was noted in the excavation. Holes were observed in the two of the USTs. A second release was reported for the site in March 1993 when a fourth UST was removed from beneath the sidewalk. Five groundwater monitoring wells were installed at the site. Phase-separated hydrocarbons (PSH) were initially detected in two of wells, but were not present during well monitoring and sampling rounds performed from 2001 through 2007. In the 1990s, the maximum detected thickness of the PSH layer was 0.82 feet in one of the wells and present only as a sheen in the other well. Although dissolved hydrocarbons were detected as degraded gasoline, BTEX and fuel oxygenates were not detected in groundwater. Hydrocarbon impacts to soil were primarily observed at the capillary fringe. The consultant estimated that the volume of hydrocarbon-impacted soil (i.e., soil with TPH concentrations greater than 100 milligrams per kilogram) left in place was 621 cubic yards. Preparation of a Corrective Action Plan (CAP) is required for the site due to its location in a groundwater basin with beneficial uses and because PSH was formerly detected overlying groundwater. This case (H26578-001) was administratively consolidated into H26578-002 on 1/22/10. Please see that case number for additional information.

S100733702

improvement activities at the northeast corner of North Maple and West Grand Streets in Escondido in December 1988. The riveted USTs were oriented east-west and were located in the City of Escondido right-of-way and extended into a parking lot adjoining the sidewalk on North Maple Street. The northernmost UST had a capacity of approximately 230 gallons, while the middle and southernmost tanks has capacities of 550 and 750 gallons, respectively. A service station had formerly occupied the site, which was originally addressed as 164 West Grand Avenue. The service station operated from approximately 1927 through at least 1949. Dispenser pumps were still visible on aerial photos near the northeast corner of North Maple Street and West Grand until 1968. Samples of the tank contents were collected on December 5, 1988, as witnessed by a DEH inspector. Analytical results for the samples indicated a maximum concentration of total petroleum hydrocarbons (TPH) as gasoline as 880 milligrams per liter (mg/l). The maximum detected concentrations of the gasoline constituents benzene, toluene, ethylbenzene, and xylene (BTEX) were detected in the middle and southernmost tanks, with BTEX concentrations were reported as 110 and 218 mg/l, respectively. The volatile organic compound (VOC) 1,2-dichloroethane was detected in the contents of the southernmost tank at a concentration of 1.2 mg/l. The semi-VOCs naphthalene, methylnaphthalene, phenol, and 2-methylphenol were also detected in the contents of the tanks. The three USTs were removed on January 24, 1990. During the removal, strong odors were noted as emanating from the excavation and stained soil was noted. Holes were observed in one or more of the USTs. However, TPH and BTES were not detected in a soil sample subsequently collected two feet beneath the tank excavation at a depth of 8 feet below grade. A second release was reported for the site in March 1993 when a fourth UST with an estimated 800-gallon capacity was removed from beneath the sidewalk along the east side of North Maple Street. Hydrocarbon odors and soil staining were noted by the DEH inspector. Five groundwater monitoring wells were installed at the site. Phase-separated hydrocarbons (PSH) were initially detected in two of wells, but were not present during well monitoring and sampling rounds performed from 2001 through 2007. In the 1990s, the maximum detected thickness of the PSH layer was 0.82 feet in one of the wells and was observed as a sheen in the other well. Although dissolved hydrocarbons were detected as degraded gasoline, BTEX and methyl-tert-butyl ether (MTBE) were not detected in groundwater samples. Hydrocarbon impacts to soil were primarily observed at the capillary fringe, located at a depth of approximately 11 feet below grade, and extend north and eastward beneath the adjoining parking lot. The consultant estimated that the volume of hydrocarbon-impacted soil (i.e., soil with TPH concentrations greater than 100 milligrams per kilogram) left in place was 621 cubic yards. The initial release case for the site (#H20578-001) was consolidated with the second release case (#H20578-002) by DEH on April 28, 2011. Due to the intermittent frequency of groundwater monitoring and sampling at the site in the past, DEH required four quarters of consecutive monitoring and sampling and preparation of a Corrective Action Plan (CAP) in order to consider the site for closure. The CAP recommended remediation by natural attenuation and was approved by DEH on June 26, 2012. Groundwater analytical data presented in the CAP indicate that the dissolved gasoline plume is stable and that benzene, toluene, and ethylbenzene are no longer detected in groundwater samples. Xylene was detected in one well sample during the most

 LOC Case Number: H32118-001  
 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History: This case was opened in December 1991 when DEH was notified that free product had been detected in monitoring wells installed adjacent to the site by Pacific Bell to investigate potential impacts to utilities. The site in 1991 was and is currently a Discount Tire store. A former Texaco station operated at the site from 1928 until 1984 when the site was redeveloped into a Discount Tire Store. The adjacent property located at 339 West Second Avenue was a former Texaco bulk petroleum depot (TBPD) which had several aboveground storage tanks for oil and gasoline storage. The TBPD operated from 1928 until 1975. Two product line releases were reported by the consultant occurring in 1980 and 1982. In April 1980, a product line leaked approximately 185 gallons of product and in February 1982, a product line reported leaked approximately 762 gallons of product. Five well were installed in 1982 to recover free product. Soil samples were collected and analyzed for gasoline and its constituents from one soil boring and borings from 23 monitoring wells associated with the site. The data indicated soil impacts from three to seven feet below ground surface in the vicinity of the former USTs and dispenser island locations at the northeast perimeter of the site, and in the former AST area of the adjacent property. Additional impacts were noted at 10.5 feet down-gradient of the former used oil UST within the current building footprint. Based on these data, the consultant estimated that there were 1,970 cubic yards of petroleum contaminated soil remaining onsite associated with the UST system. Additionally, an estimated 306 cubic yards of contaminated soil remain on the adjacent TBFD property. A total of 27 monitoring wells were installed at the site between 1982 and 2009. Three wells were destroyed and four of these wells were replaced in 2009. Groundwater monitoring began in June 1992 and was continued until July 2012. Groundwater is present at depths ranging from 2.86 to 9.01 feet below ground surface. Groundwater flows to the west-northwest with a hydraulic gradient of 0.02. Free product was initially detected floating on the water table in 1982 and again in 1991 in a well adjacent to the site. During the groundwater monitoring period, free product was only detected in well MW-7, from 1992 until 1995. Free product has not been detected in the site well since 1995. Dissolved phase gasoline constituents were detected in groundwater beneath the site and immediately down-gradient of the site. The benzene plume originated in the former dispenser area (well MW-4R) and currently extends down-gradient to well MW-15 on the adjacent TBFD property. The dissolved phase MTBE plume also originated in the former dispenser area (well MW4R) and low concentration (<5 ug/l) are present down-gradient and beneath the adjacent TBFD property. The TBA plume also appears to have originated in the former dispenser area, and was also detected side/up-gradient in well MW-13 on the adjacent TBFD property. The consultant reported that the upper 6 to 8 feet of soil was removed from the former TBFD property in 1975 when the ASTs

were removed. Free product removal using a vacuum truck was conducted at the site from February 1982 to March 1982. The volume of product recovered during this time period is unknown. From May 1983 to May 1984, free product recovery using a vacuum truck was conducted from 8 site wells. An estimated total of approximately 280 gallons of product were recovered during this time. Groundwater in the area of the site is classified as beneficial use for municipal, agricultural and industrial service supply. The consultant conducted a sensitive receptor survey for the site which indicated that there were three production wells located within one mile of the site. The consultant indicated that these well were too far away to be impacted by the site. The consultant reported that the San Diego County Wate

Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: Two 10,000-gallon USTs and one waste oil UST were removed from the site on December 31, 1998. The bottom of the gasoline UST excavation contained groundwater and floating separate phase hydrocarbons. Laboratory analysis for soil samples showed high concentrations of total petroleum hydrocarbons as gasoline. The Source Group, Inc. proposes in-situ treatment of on-site petroleum-laden groundwater to prevent further off-site migration of the petroleum groundwater plume and to mitigate the potential threat of the plume reaching Escondido Creek. For more details see Site Conceptual Model and Corrective Action Plan dated 09/24/2007 under the Site Documents tab.

 Potential Media Affect: Aquifer used for drinking water supply, Soil, Soil Vapor  
 Potential Contaminants of Concern: Gasoline  
 Site History: In October 1985, former Union 76 gasoline station removed three USTs tanks that were installed in 1951 but were reported to be in good condition when visually inspected. Free product was observed on the groundwater surface within the tank pit at the time the USTs were removed. Groundwater monitoring wells were installed in January 3, 1986 and monitoring and sampling continue. No active remediation is underway. For more information see Site Conceptual Model and Corrective Action Plan dated 09/24/2007 under the Site Documents tab.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location:	Local Agency
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Diesel, Gasoline
Site History:	On 11/15/1991 three underground storage tanks were removed from the site. Two of the tanks were located adjacent to each other and contained diesel and gasoline, and the third tank contained waste oil. Results of DEH-directed soil sampling during tank removal indicated a release of petroleum hydrocarbons in the vicinity of the dispenser and near the diesel and gasoline tanks. As a result, Unauthorized Release H31067-001 was opened. Excavation of contaminated soil was conducted in 1992, and contaminated soil was treated thermally on site (including soil excavated as part of UST removal). A total of 482 cubic yards was treated and used as backfill on site and on the adjacent property to the southwest. A total of 50 cubic yards of excavated soil was not treated as it tested clean. DEH sent a letter requiring assessment of groundwater on 4/7/1993. Additional letters were sent on 5/5/1998 and 2/20/2001 requesting a workplan for groundwater assessment, and a past due notice was sent on 12/4/2008. A past due notice was issued on 6/17/2010, requiring a workplan for groundwater assessment within thirty days. A site assessment workplan was approved by DEH on 10/8/2010. A site

assessment report ,dated 4/14/2011, summarized groundwater sampling and analysis from 8 borings, installation of four groundwater monitoring wells, analysis of soil samples obtained during monitoring well installation, and analysis of groundwater samples from the groundwater monitoring wells. Petroleum constituents were detected in groundwater samples from 7 of the 8 borings. A groundwater sample was not obtained from boring SCS-B7, as measurable free product was present. These results were used to determine the location of the four groundwater monitoring wells. Petroleum constituents were detected in a soil sample from monitoring well MW1 only, located to the west of the location of the former underground storage tanks (USTs). Benzene was detected at 3,600 micrograms per kilogram (ug/kg) and methyl tert-butyl ether (MTBE) was not detected. Petroleum constituents were detected in groundwater samples from all four monitoring wells. MTBE was the only contaminant detected in monitoring wells MW3 and MW4 at 74 and 65 micrograms per liter (ug/L), respectively. Monitoring wells MW1 and MW2 contained several petroleum constituents, including benzene at 19 and 880 ug/L and MTBE at 3.9 and 23 ug/L, respectively. The second groundwater monitoring and sampling event was completed in May 2011. Benzene and MTBE were detected in groundwater samples from all four monitoring wells. Benzene levels increased in all four monitoring wells and MTBE levels increased in two of the monitoring wells since the previous monitoring event. The consultant concluded that the lateral extent of petroleum hydrocarbon-bearing groundwater has not been delineated and recommended preparation of a workplan for additional soil assessment to the north and west of the former UST location and additional groundwater assessment. DEH directed the responsible party to submit a workplan for additional site assessment and include a soil vapor risk assessment for occupants of the office building. DEH also required that future reports provide a thorough evaluation of the distribution of MTBE observed on site. Please see the Environmental Data tab for additional site specific information.

Lead Agency: SAN DIEGO COUNTY LOP  
Case Worker: LA  
Local Agency: SAN DIEGO COUNTY LOP  
RB Case Number: 9UT3593  
LOC Case Number: H03291-001  
File Location: Local Agency  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History:

The subject site is currently an undeveloped, mostly paved lot located on the corner of Escondido Blvd. and Fourth Ave. in Escondido. An unauthorized release case H03291-001 was opened on October 31, 1997, based on the soil sampling results during an inspection of piping upgrade activities for the former operating USA gasoline station. The laboratory analytical results indicated that there had been a release of total petroleum hydrocarbons (TPH) in the gasoline range to soil with concentrations up to 17,800 mg/kg. A total of five soil borings, seventeen groundwater monitoring wells, eight vapor extraction wells, eight hydropunch-type borings, and 23 soil vapor probes have been advanced as part of the site investigation activities. Based on the assessment investigations, the soil contamination is located primarily in the area of the former underground storage tanks (USTs). Concentrations of TPH exist in this area from depths of 3 to 10 feet below ground surface (bgs), and may extend off site under 4th Avenue. The underground storage tanks were removed from the site in 2009, prior to demolition of the gas station, and the soil sampling results were significantly lower than in 1997. The highest concentration of TPH gasoline observed during the tank removals was 970 mg/kg from a stockpile sample SP-11. The stockpiled soil was placed back into the excavation after the underground tank system was removed. The consultant has estimated that there is approximately 1,700 cubic yards of impacted soil remaining at the site, with a concentration greater than 100 mg/kg TPH. Based on current groundwater elevations, the deeper impacted soil is submerged beneath groundwater. Groundwater depths have been very shallow throughout most of the life of the case and have influenced the remedial operations for the cleanup of the contaminants at the site. Groundwater monitoring was initiated in August 2000 and was completed in July 2013. Assessment activities indicate that the furthest migration of the dissolved plumes of Methyl-tert-butyl ether (MTBE) and tert-Butyl alcohol (TBA) extended down gradient and most likely commingled with the groundwater plume at the APRO No. 18 site, located at 303 S. Escondido Blvd., to the northwest. The commingled plumes could not be easily verified due to the different screen intervals for the APRO and the USA monitoring wells. Currently the dissolved benzene plume is mostly limited to the

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

**S105692079**

subject site, but may extend beneath Fourth Avenue. Also, the dissolved MTBE and TBA plumes have retracted back towards Fourth Avenue except for monitoring well MW-15, which contained a MTBE concentration of 393 g/l during the last monitoring event. The dissolved contamination observed in monitoring well MW-15 appears to be isolated from the rest of the MTBE plume. During the second quarter of 2008, the water table was lowered by an average of 5 feet throughout the site vicinity due to a dewatering project located northwest of the site. The dewatering project was shut down in December 2008, and may have contributed to the remaining contamination observed in monitoring well MW-15. An Interim Remedial Action Plan to conduct remediation was required due to the potential health risks identified to occupants of an adjacent apartment building. On December 17, 2001, a dual-phase extraction test pilot test was conducted to evaluate the removal of both soil vapors and groundwater through three newly installed vapor extraction wells. Free Product was observed floating on top of the groundwater in extraction wells VW-2 and VW-3 during the next quarterly monitoring event. These two wells are located adjacent to the underground storage tank (UST) cavity. In September 2003, the dual phase remediation system began operating at the site, and continued with various modifications and repairs to the system equipment until December 2008. The system was shut down prior to demolition of the service station. Appro

 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Longitude: -117.087146043777  
Case Type: Cleanup Program Site  
Case Worker: SM  
Local Agency: Not reported  
RB Case Number: 9UT3626  
File Location: Regional Board  
Potential Media Affected: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Diesel, Gasoline  
Site History: Due to the nature and duration of operations at the Site, numerous phases of on-site and off-site investigations have been performed. For more information see the Revised Corrective Action Plan dated March 10,2010 under the Site Documents tab. Several phases of remedial activities were completed at the Site, including excavation and disposal of soil, recovery and treatment of groundwater from the open excavation, recovery of PSH from the open excavation, and recovery and treatment of groundwater, PSH, and soil vapor using a High Vacuum Dual-Phase Extraction (HVDPE) system installed in the AST area. Approximately 80,000 gallons of PSH were recovered, 72,000 gallons skimmed from the open excavation and 8,000 gallons removed with the HVDPE system. Based on the latest data collected from the monitoring wells, Stantec concluded that the extent of petroleum hydrocarbons impact to the soil and groundwater from the Plavan Petroleum Facility has been adequately assessed, residual concentrations in groundwater are naturally attenuating, and current groundwater conditions do not pose a threat to human health, safety, or the environment . Therefore, the San Diego Water Board, on 5/16/2011, recommended that no further action be taken at the site.

LOC Case Number: H02415-002  
File Location: Local Agency  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline

Site History: The case was opened in April 1999 when a release was identified during the closure in-place of a 4,000 gallon diesel underground storage tanks (UST). This tank was located within the above ground storage tank containment area. At the time of tank closure soil mandatory soil sampling identified soil impacts in one of two samples collected. Due to limited access to this area extensive investigation of the release was not completed. MW-16 was installed in 2005 and is located approximately 10 feet to the south southeast of the tank. Groundwater motioning from February 2005 through August 2008 has demonstrated that there have been no diesel impacts to groundwater in the area of the release. Groundwater monitoring does show low level impacts of gasoline. These impacts are considered to be related to

Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Case was opened in January 1999 following the removal of two gasoline underground storage tanks (USTs). At the time of tank removal and in wells installed on site free product has be observed. Currently free product is present in the area of the former USTs with dissolved impacts extending off-site approximately 300 feet to the northwest of the former USTs. Since the case opened a total of 25 groundwater monitoring wells, and two observation wells have been installed. The September 12, 2008 Site Assessment Report provides an updated site conceptual model for the site. A Corrective Action Plan (CAP) was approved on May 25, 2010 to use a Mobile HVDPE. The first mobile event was in late November 2010. Groundwater monitoring was shifted from semi-annual to quarterly during CAP implementation and post monitoring.

File Location: Local Agency  
 Potential Media Affected: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Diesel  
 Site History: On September 11, 2001 and the October 24, 2002 there were surface spills within the above ground storage tank containment area on the above-referenced property. The September 11, 2001 spill consisted of a 200 gallon release which was quickly cleaned up and a total of 18-55 gallon drums of impacted soil were excavated and removed. The October 24, 2002 spill consisted of a 50 gallon diesel release which was quickly cleaned up and a total of 16-55 gallon drums of impacted soil were excavated and removed. Subsequent investigation at the site related to the underground storage tank release at the site (H02415-001) has demonstrated that these two releases have not caused an impact to groundwater at the site.

Case Worker: CLC  
Local Agency: Not reported  
RB Case Number: 9UT3817  
LOC Case Number: Not reported  
File Location: Local Agency  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: Three USTs were removed from this site in January 1999. Site assessment activities have been ongoing for this site. This site has been under groundwater monitoring and is currently still being assessed. Three of the groundwater monitoring wells utilized to determine the extent of the dissolved petroleum hydrocarbon plume are exhibiting increasing trends in benzene concentration, when evaluated over time. Additionally, MW-1 and MW-5 are showing increasing trends in benzene concentration and are cross-gradient from the original source area. As a result, the plume does not appear to be stable. At this time additional assessment and possibly active remediation may need to be considered to further address the petroleum hydrocarbon concentrations on this site.

**Hazardous Waste Summary:**

Waste code: D000  
Waste name: Not Defined

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

**FINDS:**

Registry ID: 110012264101

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency: Not reported  
 RB Case Number: 9UT822  
 LOC Case Number: Not reported  
 File Location: Local Agency  
 Potential Media Affect: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: Gasoline  
 Site History: Assessment activities were conducted at the site in late 1987 when hydrocarbon-impacted soil and groundwater were identified. Additional assessment activities were conducted over the next 20 years to characterize contaminants at the site. USTs were replaced in late 2000 along with several interim remedial actions. Remediation was implemented at the site in late 2008 following approval of the CAP and feasibility testing. Remediation activities are ongoing.
